With a paradigm shift in social systems, the concept of an arranged marriage seems to be losing its sheen and becoming difficult especially when you belong to one part of the country and work in another region. This is the story of a young man who finds it difficult to search for a bride. He faces a lot of expected as well as unexpected challenges during his search. He interacts with a lot of women and learns a different lesson each time. He travels multiple times from one city to another in search of his elusive bride. He puts so much effort, wastes so much energy, money and time during this eventful journey that he realizes that it would have been better to fall in love with someone instead of going through this tedious process of an arranged marriage. As he gets older and frustrated, the moot question is 'will he get a bride as per his expectation?'. Will he marry a Manglik or a non-Manglik girl? Will that girl be from Delhi, Mumbai or some other part of the country?

Messier employs the new audit approach currently being used by auditing professionals. This new approach is a direct result of the demands of Sarbanes-Oxley, which has changed the way auditors do their jobs. The new auditing approach emphasizes understanding the entity (i.e., the organization or business being audited) and its environment (i.e. industry), and then assessing the business risks faced by the entity and how management controls those risks. This new audit process focuses on business processes instead of accounting cycles. This unique and innovative approach has been developed in response to changing market dynamics. The systematic approach, referred to in the subtitle of the text, reflects the early introduction of three basic concepts that underlie the audit process: materiality, audit risk, and evidence; this allows Messier to build upon this model in subsequent chapters. These are central to everything an auditor does and a unique feature of Messier. As such, this approach helps students develop auditor judgment, a vital skill in today's auditing environment.

This book is a result of the ISD'97, Sixth International Conference on Information Systems Development-Methods and Tools, Theory and Practice held August 11-14, 1997 in Boise, Idaho, USA. The purpose of this Conference was to address the issues facing academia and industry when specifying, developing, managing and improving software systems. The selection of papers was carried out by the International Program Committee. All papers were reviewed in advance by at least three people. Papers were judged according to their originality, relevance and presentation quality. All papers were judged purely on their own merits, independently of other submissions. This year's Information Systems Development Conference-ISD'97 is the first ISD conference being held in the US. ISD was brought into existence almost ten years ago. It continues the fine tradition of the first Polish-Scandinavian Seminar on Current Trends in Information Systems Development Methodologies, held in Gdansk-Poland in 1988. ISD'98 will be held in Bled, Slovenia. ISD'97 consists not only of the technical program represented in these proceedings, but also tutorials on improved software testing and end-user information systems and workshop on sharing knowledge within international high technology industries that are intended for both, the research and business communities. We would like to thank the authors of papers accepted for ISD'97 who all made gal lant efforts to provide me with electronic copies of their manuscripts conforming to com mon guidelines. We thank them for thoughtfully responding to reviewers comments and carefully preparing their final contributions.
