Principles of Tumors: A Translational Approach to Foundations, Second Edition, provides a concise summary of translational/interdisciplinary topics on the various aspects of tumors, especially abnormalities in their cells, their causes and effects on patients. Topics discussed include how genomic abnormalities in tumors may result from the actions of carcinogens and how genomic changes determine the cell biological/morphological abnormalities in tumor cell populations. In addition, the relationships between tumor cell genomics and therapeutic outcomes are described. There are also supporting appendices on general bioscience, including the principles of histology (the cells and tissues of the body), genetics, pathology, radiology and pharmacology. This book gives a thorough, detailed, yet concise account of the main bioscience, clinical and therapeutic aspects of tumors. It emphasizes the translational aspects of research into tumors with extensive discussions of interdisciplinary issues. The content in this book will be invaluable for researchers and clinicians involved in collaborative projects where it is necessary to understand fundamental issues in other branches of biomedicine. Presents content that has been totally updated with the most recent developments of the field, including new chapters on tumor imaging exams, new surgical techniques, immunotherapy, gene therapy, and several novel therapies using natural and synthetic compounds. Presents translational approaches for every topic to improve conceptual insights for new research projects. Covers a broad range of subjects, making it easier for the reader to understand related fields. Includes diagrams for complex topics to aid in understanding for non-specialists

In establishing how certain chemicals can cause behavioural disorders, the process of neurotoxicity risk assessment poses significant challenges to every discipline within neuroscience. In this volume, leaders from industrial, academic, and government settings share insights on behavioural measurement in neurotoxicity risk assessment, and address the critical scientific issues arising from the expanding

role of neurobehavioral toxicology in public policy development.; The authors set out to provide a comprehensive and authoritative review of current methods in the analysis and interpretation of neurobehavioural toxicology. Coverage begins with a discussion of criteria for determining neurotoxic potential. The next section examines neurobehavioural evaluations in developmental neurotoxicity. Subsequent sections focus on activity and observational data and applications of schedule-controlled operant behaviour in toxicity testing. The contributors address controversies surrounding the suitability and interpretation of procedures designed for neurotoxicological assessments. Some case studies are also included.
