Domestic violence in Indigenous communities. Polygamy. Sharia law. It seems that in public debates around the world, concerns about marginalised communities often revolve around issues of gender and women's rights. Yet all too often, discussions about complex matters are reduced to simplistic debates such as "hijab: to ban or not to ban?" or "Muslim women: oppressed or liberated?". This collection provides a space for in-depth analyses on the politics of gender, race and religion. As well as critical reflections on images and experiences of Muslim women, chapters also explore the relationships between gender, violence and protection, and offer innovative possibilities for intellectual and practical understandings at the intersection of gender, race and religion. Essential reading for scholars and students of gender and women's studies, cultural studies, racial and ethnic studies, religious studies and an educated public interested in understanding the challenges and possibilities of tackling both racism and the

oppression of women.

On Location Recording Techniques CRC Press This open access book provides a concise explanation of the fundamentals and background of the surround sound recording and playback technology Ambisonics. It equips readers with the psychoacoustical, signal processing, acoustical, and

mathematical knowledge needed to understand the inner workings of modern processing utilities, special equipment for recording, manipulation, and reproduction in the higher-order Ambisonic format. The book comes with various practical examples based on free software tools and open scientific data for reproducible research. The book's introductory section offers a perspective on Ambisonics spanning from the origins of coincident recordings in the 1930s to the Ambisonic concepts of the 1970s, as well as classical ways of applying Ambisonics in first-order coincident sound scene recording and reproduction that have been practiced since the 1980s. As, from time to time, the underlying mathematics become quite involved, but should be comprehensive without sacrificing readability, the book includes an extensive mathematical appendix. The book offers readers a deeper understanding of Ambisonic technologies, and will especially benefit scientists, audio-system and audio-recording engineers. In the advanced sections of the book, fundamentals and modern techniques as higher-order Ambisonic decoding, 3D audio effects, and higher-order recording are explained. Those techniques are shown to be suitable to supply audience areas ranging from studio-sized to hundreds of listeners, or headphone-based playback, regardless whether it is live, interactive, or studio-produced 3D audio material. **Turbomachinery** John Wiley & Sons Master programming Arduino with this hands-on guide Arduino Sketches is a practical guide to programming theincreasingly popular microcontroller that brings gadgets to life.Accessible to tech-lovers at any level, this book provides expertinstruction on Arduino programming and hands-on practice to testyour skills. Introduction to Digital Audio Coding and Standards provides a detailed introduction to the methods, implementations, and official standards of state-of-the-art audio coding technology. In the book, the theory and implementation of each of the basic coder building blocks is addressed. The building blocks are then fit together into a full coder and the reader is shown how to judge the performance of such a coder. Finally, the authors discuss the features, choices, and performance of the main state-of-the-art coders defined in the ISO/IEC MPEG and HDTV standards and in commercial use today. The ultimate goal of this book is to present the reader with a solid enough understanding of the major issues in the theory and implementation of perceptual audio coders that they are able to build their own simple audio codec. There is no other source available where a non-professional has access to the true secrets of audio coding.

"Meticulously researched and elegantly written, Border Crimes argues that Australia's treatment of asylum seekers as `illegal immigrants' should itself be regarded as criminal - as state crime. Mike Grewcock marshals the evidence irrefutably; after reading his account, `boat people' will never again appear as suspected illegal entrants. "Professor Scott Poynting, Manchester Metropolitan University, co-author Bin Laden in the Suburbs: Criminalising the Arab Other. "In this powerful and compelling book, Mike

Grewcock eloquently exposes the organised criminal abuses and violence perpetrated by states against one of the world's most vulnerable populations. Through the lens of a state crime framework and with conceptual rigour he traces the political and historical antecedents of Australia's shameful asylum policy and practice. Refreshingly this book is not only about unconscionable crimes committed by states it also engages with resistance and locates the possibility of social justice firmly within the domain of civil society."

Christian Controversies Packt Publishing Ltd As audio and telecommunication technologies develop, there is an increasing need to evaluate the technical and perceptual performance of these innovations. A growing number of new technologies (e.g. low bit-rate coding) are based on specific properties of the auditory system, which are often highly non-linear. This means that the auditory quality of such systems cannot be measured by traditional physical measures (such as distortion, frequency response etc.), but only by perceptual evaluations in the form of listening tests. Perceptual Audio Evaluation provides a comprehensive guide to the many variables that need to be considered before, during and after experiments. Including the selection of the content of the programme material to be reproduced, technical aspects of the production of the programme material, the experimental set-up including calibration, and the statistical planning of the experiment and subsequent analysis of the data. Perceptual Audio Evaluation: Provides a complete and accessible guide to the motives, theory and practical application of perceptual evaluation of reproduced sound. Discusses all the variables of perceptual evaluation, their control and their possible influence on the results. Covers in detail all international standards on the topic. Is illustrated throughout with tables, figures and worked solutions. Perceptual

Audio Evaluation will appeal to audio and speech engineers as well as researchers in audio and speech laboratories. Postgraduate students in engineering or acoustics and undergraduate students studying psychoacoustics, speech audio processing and signal processing will also find this an essential reference.

Music Notation in the Twentieth Century Springer

Dividing classical and popular music recording into two distinct sections, this book focuses on the special techniques used for recording outside the confines of the studio and shows readers how to interface with sound reinforcement equipment in the hall or club. Recent developments in portable digital multitrack recorders and high-quality mixers have made on-location recording feasible for all recording engineers. Many bands want to be recorded in concert because they feel that is when they play their best music. The engineer's job is to capture that performance on tape and bring it back live and there's only one chance to get it right. This book covers all aspects of live recording, with a special section on miking techniques for surround sound. Pre-session procedures, such as power and grounding practice, pre-production meetings, and site surveys are fully examined. On Location Recording Techniques also describes the paperwork required to plan a live recording session. A study of surround miking techniques for both classical and popular music, and of the components needed to build a quality remote recording truck complete this book.

An attempt has been made to present some modern and non-conventional applications of numerical optimization in the areas of Machine Learning, VLSI Design/ Electrical Circuits and Financial Mathematics. A distinctive feature of the book is also to provide basic MATLAB codes as building blocks for readers to develop their own codes for various algorithms discussed in the book. **Numerical Optimization with Applications**

ROHAN PRAKASHAN An overview of approaches to working with musical scores in the age of computer--and especially Internet--applications. The Virtual Score examines a broad range of approaches to working with musical scores in ways suited to electronic distribution. The first section, on musical representation and interchange, discusses early music and its multiple editorial stances, scores in Braille musical notation (with and without NIFF), the GUIDO format for "adequate" (as opposed to comprehensive) music representation, Extensible Markup Language (XML) and music, and the latest methods for distributing scores online. The second section discusses retrieval and/or analysis of data from encoded melodies. The final section discusses the use of image-processing software to restore lost features of

primary sources of music prints and manuscripts, to archive the original and/or restored images, and, in some cases, to facilitate electronic access to the images.

Modern Recording Techniques Computing in Musicology

Archaeoacoustics focuses on the role of sound in human behaviour, from earliest times up to the development of mechanical detection and recording devices in the 19th century. Recent calls for an `archaeology of the senses' have served as a timely, even overdue reminder that the past which we experience - and which others have experienced before us - is multisensory, drawing not only upon the primary field of vision, but also on touch, smell and hearing. Megalithic tombs, Palaeolithic painted caves, Romanesque churches and prehistoric rock shelters all present specific sound qualities which offer clues as to how they may have been designed and used. Voices resonate, external noises are subdued or eliminated, and a special aural dimension is accessed which complements the evidence of our other senses. The present volume, arising from a conference held at the McDonald Institute in 2003, brings together archaeologists and specialists in early musical instruments and acoustics in an attempt to unlock some of the meaning latent in the acoustics of such early structures and spaces. It will be essential reading for all who are concerned to seek a broader understanding of human sensory experience from prehistory up to historical times.
