Math Instruction for Students with Learning Problems, Second Edition  
provides a research-based approach to mathematics instruction designed to  
build confidence and competence in pre- and in-service PreK–12 teachers.  
This core textbook addresses teacher and student attitudes toward  
mathematics, as well as language issues, specific mathematics disabilities,  
prior experiences, and cognitive and metacognitive factors. The material is  
rich with opportunities for class activities and field extensions, and the  
second edition has been fully updated to reference both NCTM and CCSSM  
standards throughout the text and includes an entirely new chapter on  
measurement and data analysis.

U.S. Government Research Reports Research & Education  
Assoc.

In this updated edition, Cathy Vatterott examines the role  
homework has played in the culture of schooling over the  
years; how such factors as family life, the media, and  
"homework gap" issues based on shifting demographics  
have affected the homework controversy; and what recent  
research as well as common sense tell us about the  
effects of homework on student learning. She also  
explores how the current homework debate has been  
reshaped by forces including the Common Core, a  
pervasive media and technology presence, the mass  
hysteria of "achievement culture," and the increasing shift  
to standards-based and formative assessment. The best  
way to address the homework controversy is not to  
eliminate homework. Instead, the author urges educators  
to replace the old paradigm (characterized by long-  
standing cultural beliefs, moralistic views, and behaviorist  
philosophy) with a new paradigm based on the following  
elements: Designing high-quality homework tasks;  
Differentiating homework tasks; Deemphasizing grading of  
homework; Improving homework completion; and  
Implementing homework support programs. Numerous  
examples from teachers and schools illustrate the new  
paradigm in action, and readers will find useful new tools  
to start them on their own journey. The end product is  
homework that works—for all students, at all levels.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children

from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

When it ' s time for a game change, you need a guide to the new rules. Helping Students Make Sense of the World Using Next Generation Science and Engineering Practices provides a play-by-play understanding of the practices strand of A Framework for K – 12 Science Education (Framework) and the Next Generation Science Standards (NGSS). Written in clear, nontechnical language, this book provides a wealth of real-world examples to show you what ' s different about practice-centered teaching and learning at all grade levels. The book addresses three important questions: 1. How will engaging students in science and engineering practices help improve science education? 2. What do the eight practices look like in the classroom? 3. How can educators engage
