Effective science teaching requires
creativity, imagination, and innovation.
In light of concerns about American
science literacy, scientists and
educators have struggled to teach this
discipline more effectively. *Science
Teaching Reconsidered* provides
undergraduate science educators with a
path to understanding students,
accommodating their individual

differences, and helping them grasp the
methods--and the wonder--of science.
What impact does teaching style have?
How do I plan a course curriculum? How
do I make lectures, classes, and
laboratories more effective? How can I
tell what students are thinking? Why
don't they understand? This handbook
provides productive approaches to these
and other questions. Written by
scientists who are also educators, the
handbook offers suggestions for having
a greater impact in the classroom and
provides resources for further research.

Children are already learning at birth, and they

develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly

advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

We Beat the Street

Carlin and Soskice integrate the financial system with a model of the macro-economy. In doing this, they take account of the gaps in the mainstream model exposed by the financial crisis and the Eurozone crisis. This equips the reader with a realistic modelling framework to analyse the economy both in crisis times and in periods of stability.
