"Computerised Test Generation for Cross-National Military Recruitment' by Prof. Sidney H. Irvine is a handbook for use in occupational psychology, test construction and psychometrics. The book describes the development of the British Army Recruitment Battery (BARB) by Prof. Irvine and his colleagues at the University of Plymouth. BARB is a computer-administered selection battery that is still in use to this day and is capable of developing new parallel tests for every

candidate in the recruitment process. In telling the story, Sidney Irvine describes not only the development of the battery itself, funded by the UK Ministry of Defence, but all the work that went on before and afterwards, in the United Kingdom, with European allies and in the United States. \_x000D\_ Prof. Irvine argues that judicious application of the current state-of-the art in psychometric selection tests can be used to maximise retention and minimise attrition. As such, this long-awaited book will be of great interest to psychologists, psychometricians, test developers, those involved in personnel selection and all with an interest in military history, in particular the history of military science. With a foreword and chapter introductions from a worldwide array of subject matter experts, the book also has a full subject index and an extensive bibliography. I commend it heartily.” — Professor Jamie Hacker Hughes CPsychol CSci FBPsS, Former Defence Consultant Advisor in Psychology, Ministry of Defence, United Kingdom.

Schools across America are rolling out new, more rigorous curricula in order to meet the demands created by a new set of English and Mathematics standards – known nationally as the Common Core State Learning Standards. You can expect to see a number of changes in your child’s sixth grade class. In English, students will now read more Informational Texts. This type of passage provides facts and often deals with current events, science, and social studies. In addition, questions posed about these readings will ask students to find evidence and use it to formulate an argument. In Mathematics, students will spend more time developing their understanding of specific and important math concepts. Students will be expected to both demonstrate understanding of each topic and apply their mathematical skills to real-world situations. As a parent, it is important not only to understand the new standards, but also to have the tools to help your child do his or her best in school. This book is designed to provide you with the guidance and resources to support classroom learning and help your child succeed.
