Parts 1 and 2 of this document outline the Government's analysis of the strategic global context and give an assessment of the UK's place in the world. They also set out the core objectives of the strategy: (i) ensuring a secure and resilient UK by protecting the country from all major risks that can affect us directly, and (ii) shaping a stable world - actions beyond the UK to reduce specific risks to the country or our direct interests overseas. Part 3 identifies and analyses the key security risks the country is likely to face in the future. The National Security Council has prioritised the risks and the current highest priority are: international terrorism; cyber attack; international military crises; and major accidents or natural hazards. Part 4 describes the ways in which the strategy to prevent and mitigate the specific risks will be achieved. And implications and applications are demonstrated in varied fields, from updated risk models for the insurance sector to improved risk communication in health services to considering risk perception in policy decisions. A sampling of the topics: Personality and risk: beyond daredevils—risk taking from a temperament perspective. Cognitive, developmental, and neurobiological aspects of risk judgments. Today's Army is challenged by a wide range of threats and operating

environments. These challenges, plus new technologies, require our leaders to use creative measures to provide positive protection to our Soldiers and equipment. In April 1998, Field Manual (FM) 100-14 (FM 5-19) introduced to the Army the first doctrinal publication on risk management. It detailed the application of a step-by-step process to conserve combat power and resources. This milestone manual outlined a framework that leaders could use to make force protection a routine part of planning, preparing, and executing operational, training, and garrison missions. Before the outset of the global war on terrorism it became apparent that FM 100-14 would require updating to meet the needs of the future. Army assessments also indicated that the existing manual needed to be expanded to provide clear standards and guidance on how the risk management process was to be applied. This led to this current revision. During development of this revision the Army broadened its understanding of the risk management process to encompass all operations and activities, on and off duty. This holistic approach focuses on the composite risks from all sources rather than the traditional practice of separating accident from tactical hazards and associated risks. This revision has been refocused to clearly reflect the Army's new composite approach, and has been retitled Composite Risk Management (CRM). CRM represents a culture change for the Army. It departs from the past cookie cutter safety and risk management mentality through teaching Soldiers " how to think " rather than telling them " what to think. " This manual expands the context of the original FM by focusing on the application of composite risk management to the military decisionmaking process (MDMP) and the Army training management system. It further assigns the responsibilities for conducting risk management training during initial entry training and professional military education. It is a tool that works in conjunction with the Army's on-going initiative to firmly attach CRM to all Army processes. It is a milestone document for the standardization and institutionalization of the techniques, tools, and procedures that lead to sound decisionmaking and valid risk acceptance by leaders at all levels. This revision is a full rewrite of FM 100-14. It marks a break with the past by integrating the CRM process into Army operations. CRM is not a stand-alone process, a " paper work " drill, or an add-on feature. Rather, it is used as a fully-integrated element of detailed planning. It must be so integrated as to allow it to be executed intuitively in situations that require immediate action. CRM should be viewed as part of the military art interwoven throughout the Army's military decisionmaking and training management cycles.

This volume in the NATO Science for Peace and Security Series contains the papers of the Advanced Training Course (ATC) ' Legal Aspects of Combating Terrorism '. The purpose of this course was to support NATO on defence issues related to terrorism and united experts from various disciplines to give participants an understanding of how the various dimensions of the laws and their application fit together. In addition to the lectures that can be found in this book, the course was divided into three modules: the legal response to terrorism in general terms; combating terrorism using lawful means; and harmonizing the Law of Armed Conflict (LAC), national laws and NATO in the fight against terrorism. One of the main questions dealt with in this work is whether, in the face of the new threat, terrorism should still be countered through the ordinary means of criminal law, or whether there should be a significant shift in enforcement methods, including a less multilateral approach to decision-making and an increased use of military force.

Volume 5, Deep Maneuver: Historical Case Studies of Maneuver in Large-Scale Combat Operations, presents eleven case studies from World War II through Operation Iraqi Freedom focusing on deep maneuver in terms of time, space and purpose. Deep operations require boldness and audacity, and yet carry an element of risk of overextension - especially in light of the independent factors of geography and weather that are ever-present. As a result, the case studies address not only successes, but also failure and shortfalls that result when conducting deep operations. The final two chapters address these considerations for future Deep Maneuver.

This book examines the human factors issues associated with the development, testing, and implementation of helmet-mounted display technology in the 21st Century Land Warrior System. Because the framework of analysis is soldier performance with the system in the full range of environments and missions, the book discusses both the military context and the characteristics of the infantry soldiers who will use the system. The major issues covered include the positive and negative effects of such a display on the local and global situation awareness of the individual soldier, an analysis of the visual and psychomotor factors associated with each design feature, design considerations for auditory displays, and physical sources of stress and the implications of the display for affecting the soldier's workload. The book proposes an innovative approach to research and testing based on a three-stage strategy that begins in the laboratory, moves to controlled field studies, and culminates in operational testing.

This Army tactics, techniques, and procedures (ATTP) reinforces the fundamentals of mission command established in field manual (FM) 3-0, Operations; FM 5-0, The Operations Process; and FM 6-0, Mission Command. Whereas the above manuals focus on the fundamentals of mission command, this manual provides commanders and staff officers with tactics, techniques, and procedures (TTP) essential for the exercise of mission command. This is a new Army publication. It includes many of the appendices currently found in FM 5-0 and FM 6-0 that addressed the "how to" of mission command. By consolidating this material into a single publication, Army leaders now have a single reference to assist them with TTP associated with planning, preparing for, executing, and continually assessing operations. This ATTP also enables the Army to better focus the material in future editions of FMs 5-0 and 6-0 on the fundamentals of the operations process and mission command, respectively.
