Increasing use of fees to offset declining appropriations has been an ongoing reality for the past 10 years. There are few studies that attempt to gather the impact this has on the users at Corps projects. This study developed marketing and demand information along with attitudinal measures related to fees for Corps day-use facilities (picnic areas, beaches, and boat ramps) from six Corps projects in different parts of the country. Revenue projections and fee impacts on population subgroups along with respondent motivations, attitudes, and expectations towards fees are provided along with recommendations concerning the implementation and level of fee for day-use facilities. Attitudes, Motivations, Perceptions, Fees, Outdoor recreation, Revenue. Marketing and demand studies.

Safety Inspection and Testing of Lifting Devices Jeffrey Frank Jones

Operations research grew out of the application of the scientific method to certain problems of war during World War II. This book tells the story of how operations research became an important activity in the Eighth Air Force. It emphasizes the people involved in these historical events, rather than the technical matters with which they dealt.

The Army Research Laboratory (ARL) is the corporate laboratory for the U.S. army, which bridges scientific and military communities. The ARL is critical in maintaining the United States' dominant military power through its advanced research and analysis capabilities. The National Academies of Sciences, Engineering, and Medicine's Army Research Laboratory Technical Assessment Board (ARLTAB) conducts biennial assessments of the scientific and technical quality of the facilities. These assessments are necessary to ensure that the ARL's resources and quality of programs are maximized. 2017-2018 Assessment of the Army Research Laboratory includes findings and recommendations regarding the quality of the ARL's research, development, and analysis programs. The report of the assessment is subdivided by the ARL's Science and Technology campaigns, including Materials Research, Sciences for Lethality and Protection, Information Sciences, Computational Sciences, Sciences for Maneuver, Human Sciences, and Analysis and Assessment. This biennial report summarizes the findings for the 2017-2018 period.

Army Safety Report National Academies Press

This book illustrates the role that Private Security Companies (PSC) with ' Chinese characteristics ' play in protecting people and property associated with the Belt and Road Initiative (BRI). The revival of the ancient Silk Road economic " belt, " combined with the 21st Century sea lanes of communication known as the " road, " is intended to enhance global connectivity and increase commercial activity. However, the socio-political risks associated with Chinese outbound direct investments are often overlooked. Terrorism, separatism, kidnapping and other risks are mostly new to Chinese companies, some of which are operating abroad for the first time. Economic globalization and the transnational exploitation of natural resources have increased the need for Chinese-owned PSCs in spite of the disdain for the profession of " a lance for hire. " Due to peculiar geo-strategic and geo-economic features, the " belt " from Central Asia to Pakistan and the " road " from the Somali coast to the Strait of Malacca are characterized by a high level of insecurity. This book ' s focus on how the state ' s monopoly of force privatization can play a significant role in protecting

the New Silk Road will be of interest to policymakers, journalists, and academics.

This Note describes a conceptual design for Army Logistics Assessment--Extended (ALA-X), a methodology for assessing the readiness and sustainability of the U.S. Army to support logistically its present combat forces during a major war. The methodology is intended for use in the Planning, Programming, and Budgeting process, so that these parts of the Army program dealing with logistics functions and resources can be better prepared and justified. The ALA-X methodology will relate resources among 38 categories of logistics resources to specific measures of combat capability and will treat them simultaneously so that tradeoffs and substitutions can be performed.
