Color and Mastering for Digital Cinema explores the implications for motion picture post production processes and changes required to the supporting equipment and software. While a new concept to the motion picture community, the selection of the wide gamut, output-referred XYZ color space for digital cinema distribution is based on decades of color science and experience in other industries. The rationale for choosing XYZ and the other color encoding parameters is explained and the book also provides a full case study of the development of DLP Cinema® projectors by Texas Instruments. Finally, this book explores how the XYZ color encoding concept can be extended to support enhanced display technologies in the future. This book contains: * Brilliant 4-color illustrations that compliment the color science explanations * Never before published industry information from author Glenn Kennel, a world leader in digital cinema color technology * Descriptions of key issues and background on decisions that were made in the standardization process By Glenn Kennel, Glenn Kennel is VP/GM of Feature Film Services at Laser Pacific Media Corporation, a leading provider of a full range of post production services for television and feature film. Recently, he worked for the DLP Cinema group of Texas Instruments in a role that included technology and business development. Previously, in a twenty year career with Kodak, he led the development of the Cineon digital film scanners and laser recorders and the prototype HDTV telecine that became the Spirit Datacine. As a consultant, he helped DCI draft the technical specifications for digital cinema. Kennel also chairs the SMPTE DC28 Color ad hoc group and the DC28.20 Distribution working group. He is a SMPTE Fellow and has received the SMPTE Journal Award. He is also a member of the Academy of Motion Picture Arts and Sciences.

Chapters are written to be accessible and easy to understand by all levels of engineers and technicians. A wide range of related topics that engineers and technical managers need to understand are covered, including broadcast documentation, FCC practices, technical standards, security, safety, disaster planning, facility planning, project management, and engineering management.

The Insider's Guide To Film Schools CRC Press

This volume provides a history of the most consequential 35mm motion picture camera introduced in North America in the quarter century following the Second World War: the Arriflex 35. It traces the North American history of this camera from 1945 through 1972--when the first lightweight, self-blipped 35mm cameras became available. Chronicle of a Camera emphasizes theatrical film production, documenting the Arriflex's increasingly important role in expanding the range of production choices, styles, and even content of American motion pictures in this period. The book's exploration culminates most strikingly in examples found in feature films dating from the 1960s and early 1970s, including a number of films associated with what came to be known as the "Hollywood New Wave." The author shows that the Arriflex prompted important innovation in three key areas: it greatly facilitated and encouraged location shooting; it gave cinematographers new options for intensifying visual style and content; and it stimulated low-budget and independent production. Films in which the Arriflex played an absolutely central role include Bullitt, The French Connection, and, most significantly, Easy Rider. Using an Arriflex for car-mounted shots, hand-held shots, and zoom-lens shots led to greater cinematic realism and personal expression.

Image Making for Cinematographers and Directors A&C Black

The lens is generally the most expensive and least understood part of any camera. In this book, Rudolf Kingslake traces the historical development of the various types of lenses from Daguerre's invention of photography in 1839 through lenses commonly used today. From an early lens still being manufactured for use in low-cost cameras to designs made possible through such innovations as lens coating, rare-earth glasses, and computer aided lens design and testing, the author details each major advance in design and fabrication. The book explains how and why each new lens type was developed, and why most of them have since been abandoned. This authoritative history of lens technology also includes brief biographies of several outstanding lens designers and manufacturers of the past.

The book is not limited to equipment specifications, however; Uva offers tips and tricks throughout in order to make the process of setting up and shooting safer and more efficient. Grips often need to invent makeshift solutions in a short time, and Uva shares many such devices developed over his years in the film and TV industry. This book will help grips and key grips move on to the bigger feature projects and commercials that require this equipment. It will also be useful for directors of photography and producers in pre-planning the required equipment for specific shots.

A Complete Professional Handbook Phaidon Press

This spirited volume explores the history and diversity of improvisation in the cinema, including works by Jean Renoir, Jean-Luc Godard, and Nobuhiro Suwa. Gilles Mouëllic examines improvisational practices that can be specifically attributed to the cinema and argues in favor of their powers as instigators of unprecedented forms of expression. Improvising Cinema reflects both on the permanence of attempting improvisation and the relationship between technology and aesthetics. Mouëllic concludes preservation becomes even more invaluable in the case of improvisation, as the creative act exists only within the brief time span of the performance.
