First published in 1924, Otto Rank's

The Trauma of Birth took as its starting point a note that Freud added to his The Interpretation of Dreams :

"Moreover, the act of birth is the first experience of anxiety, and thus the source and prototype of the affect of anxiety". Rank set out to identify "the ultimate biological basis of the psychical," the very

"nucleus of the unconscious" (p. xxiii). For him this was the physical event of birth, whereby the infant passes from a state of perfectly contented union with the mother to a state of parlous separation via an oppressive experience of asphyxiation, constriction, confinement in the vaginal canal, and so on—all feelings recognizable in anxiety states of every kind. It was the struggle against this traumatic experience of birth, in Rank's account, that structured the fantasy life of the child, including the disavowal of the

difference between the sexes, infantile sexual theories, and oedipal scenarios. Castration anxiety was a defensive derivative of the anxiety associated with the birth trauma.

This book offers a comprehensive overview of the concept of repressed memories. It provides a history and context that documents key events that have had an effect on the way that modern psychology and psychotherapy have developed. Chapters provide an overview of how human memory functions and works and examine facets of the misguided theories behind repressed memory. The book also examines the science of the brain, the reconstructive nature of human memory, and studies of suggestibility. It traces the present-day resurgence of a belief in repressed memories in the general public as well

as among many clinical psychologists, psychiatrists, social workers, “ body workers, ” and others who offer counseling. It concludes with legal and professional recommendations and advice for individuals who deal with or have dealt with the psychotherapeutic practice of repressed memory therapy. Topics featured in this text include: The modern diagnosis of Dissociative Identity Disorder (DID) (once called MPD) The “ Satanic Panic ” of the 1980s and its relation to repressed memory therapy. The McMartin Preschool Case and the “ Day Care Sex Panic. ” A historical overview from the Great Witch Craze to Sigmund Freud ’ s theories, spanning the 16th to

19th centuries. An exploration of the cultural context that produced the repressed memory epidemic of the 1990s. The repressed memory movement as a religious sect or cult. The Repressed Memory Epidemic will be of interest to researchers and clinicians as well as undergraduate and graduate students in the fields of psychology, sociology, cultural studies, religion, and anthropology.
