Long respected as a manufacturer of sturdy agricultural machinery, the John Deere Company began in the 1960s to build a line of consumer products in a dedicated factory in Horicon, Wisconsin. Starting with a lawn and garden tractor in 1963, Deere soon entered the fast-growing snowmobile market, introducing two models in 1971. The next 13 years would see a succession of models as Deere vied against tough competitors in a weather-dependent market. This detailed history, written by two key participants in the snowmobile program, describes the development of John Deere snowmobiles from start to finish: the design and engineering decisions that shaped each important model; reception of the snowmobiles by consumers; the factory race teams; the introduction of front-engine and water-cooled models; the process of selecting engines and negotiating with suppliers, including when problems developed; and the snowmobiles' impact on product engineering. The text provides an inside view of Deere's Consumer Products Division at a time of rapid growth, and of the people and processes that made it all happen.

A brand-new edition of the classic guide on low-speed wind tunnel testing While great advances in theoretical and computational methods have been made in recent years, low-speed wind tunnel testing remains essential for obtaining the full range of data needed to guide detailed design decisions for many practical engineering problems. This long-awaited Third Edition of William H. Rae, Jr.'s landmark reference brings together essential information on all aspects of low-speed wind tunnel design, analysis, testing, and instrumentation in one easy-to-use resource. Written by authors who are among the most respected wind tunnel engineers in the world, this edition has been updated to address current topics and applications, and includes coverage of digital electronics, new instrumentation, video and photographic methods, pressure-sensitive paint, and liquid crystal-based measurement methods. The book is organized for quick access to topics of interest, and examines basic test techniques and objectives of modeling and testing aircraft designs in low-speed wind tunnels, as well as applications to fluid motion analysis, automobiles, marine vessels, buildings, bridges, and other structures subject to wind loading. Supplemented with real-world examples throughout, Low-Speed Wind Tunnel Testing, Third Edition is an indispensable resource for aerospace engineering students and professionals, engineers and researchers in the automotive industries, wind tunnel designers, architects, and others who need to get the most from low-speed wind tunnel technology and experiments in their work.

The Edgar Award-winning introduction to private investigator Kate Shugak, A Cold Day for Murder is the first in Dana Stabenow's critically acclaimed Kate Shugak mysteries. Kate Shugak is a native Aleut working as a private investigator in Alaska. She's five foot, one inch tall, carries a scar that runs from ear to ear across her throat, and owns a half-wolf, half-husky dog named Mutt. Resourceful, strong-willed, defiant, Kate is tougher than your average heroine — and she needs to be to survive the worst the Alaskan wilds can throw at her. Somewhere in twenty million acres of forest and glaciers, a ranger has disappeared: Mark Miller. Missing six weeks. It's assumed by the National Park Service that Miller has been caught in a snowstorm and frozen to death: the typical fate of those who get lost in this vast and desolate terrain. But as a favour to his congressman father, the FBI send in an investigator: Ken Dahl. Last heard from two weeks and two days ago. Now it's time to send in a professional. Kate Shugak: light brown eyes, black hair, five foot one with an angry scar from ear to ear. Last seen yesterday... Reviewers on Dana Stabenow's Kate Shugak series: 'An antidote to sugary female sleuths: Kate Shugak, the Aleut private investigator.' New York Times 'Crime fiction doesn't get much better than this.' Booklist 'If you are looking for something unique in the field of crime fiction, Kate Shugak is the answer.' Michael Connelly 'An outstanding series.' Washington Post 'One of the strongest voices in crime fiction.' Seattle Times

For more than 8,000 years humans have been preserving meat and fish through canning, curing, smoking, and freezing, use techniques that remove the moisture and make it possible to keep meat for much longer than its natural shelf life. However, improper preservation of meat leads to more than 40% of all reported cases of food borne illness according to the Center for Disease Control, meaning it is necessary for everyone to carefully, effectively practice safe storage practices and ensure the meat is well preserved. This book will show any potential meat preserver how to go about the process of storing meat for long term use in a variety of methods, while constantly keeping an eye to the possibility of food borne illness and the loss of freshness. You will learn everything you need to know to start the process of setting aside and preserving your meat, fish, and game. Starting with a series of charts and basic details about different kinds of meat and fish, from venison to beef to salmon, you will learn which animal products store best with which methods, which methods must be avoided, and which diseases are the greatest risk when you store meat. With this information in hand, you will start learning how the freezing, canning, curing, and smoking processes work. You will be given detailed outlines of each process starting with what equipment you will need. Experts in meat preservation have been interviewed and their insights have been included here to provide a detailed and full overview of everything you can expect in the process. From these interviews, you will start the process of understand what you need

to effectively preserve meat products. You will learn what can lead to failure for all four methods, what the best possible storage locations are for each, and what materials should be avoided at all costs. Learn how smoking works and the timelines for every form of storage from the moment the animal is butchered to the moment it needs to be preserved. No matter what kind of animal you are preserving, this book will provide the details you need to effectively store the meat for later use. Atlantic Publishing is a small, independent publishing company based in Ocala, Florida. Founded over twenty years ago in the company president's garage, Atlantic Publishing has grown to become a renowned resource for non-fiction books. Today, over 450 titles are in print covering subjects such as small business, healthy living, management, finance, careers, and real estate. Atlantic Publishing prides itself on producing award winning, high-quality manuals that give readers up-to-date, pertinent information, real-world examples, and case studies with expert advice. Every book has resources, contact information, and web sites of the products or companies discussed.

This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using E10 gasoline (10% ethanol mixed with pump gasoline). Performance technologies that are presented include: • Engine Design: application of the four-stroke engine • Applications to address both engine and track noise • Exhaust After-treatment to reduce emissions The SAE International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors' modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.
