Chronic or repeated stress, particularly psychosocial stress, is an acknowledged risk factor for

numerous affective and somatic disorders in modern societies. Thus, there is substantial evidence showing that chronic stress can increase the likelihood of major depressive disorder and anxiety disorders, as well as cardiovascular diseases, irritable bowel syndrome and pain syndromes, to name but a few, in vulnerable individuals. Although a number of pharmacological agents are available to treat such stress-related disorders, many patients do not respond to them, and those who do often report a number of side effects. Therefore, a major emphasis in modern basic research is to uncover the underlying aetiology of these disorders, and to develop novel efficacious treatment strategies. This has led to a resurgence in developing, and using, appropriate animal models to study a wide variety of stress-related disorders. Thus, the aim of this research topic "Using stress-based animal models to understand the mechanisms underlying psychiatric and somatic disorders" was to bring together novel research articles and comprehensive review articles from prominent stress researchers. In addition to describing the insights such models have provided relating to the aetiology of psychiatric and somatic disorders, these articles also encompass mechanisms that are believed to underlie stress resilience and stress-protection. Finally, given the current prominence on the role of the brain-gut axis in health and disease, the research topic covers the emerging evidence showing how the gut, particularly the microbiota, influences affective behaviour and physiology.

HIV/AIDS: Political Will and Hope ScholarlyEditions

HIV/AIDS: Political Will and Hope, demonstrates that the scourge of the AIDS, flourishes within the weaknesses of the Nigerian state and in the deficiencies of socio-cultural, economic and political constructs. The abovementioned structures have nurtured a culture and politics of neglect, inequalities and marginalisation of disempowered and subordinated children, men and more especially women. These disease-prone circumstances expose human behavioural weaknesses and the limitations in the government structures as well as poor implementation of policies especially within the health care sector. The result is the inefficiencies, insufficiencies and inadequacies in the HIV/AIDS preventive as well as care and support programmes. It therefore makes clear that for the Nigerian state to prove itself in the present scourge of AIDS, it would have to exert all its political will in order to construct a proper caring responsibility as a basic attitude for her citizenry in general and for her overwhelming HIV/AIDS patients in particular. This is a challenge to a health-care reform and an adequate caring responsibility for people living with AIDS. To do this effectively, this book recommends a few steps.
