This is a book about living with Alzheimer's, not dying with it. It is a book about hope, faith, and humor—a prescription far more powerful than the conventional medication available today to fight this disease. Alzheimer's is the sixth leading cause of death in the US—and the only one of these diseases on the rise. More than 5 million Americans have been diagnosed with Alzheimer's or a related dementia; about 35 million people worldwide. Greg O'Brien, an award-winning investigative reporter, has been diagnosed with early-onset Alzheimer's and is one of those faceless numbers. Acting on long-term memory and skill coupled with well-developed journalistic grit, O'Brien decided to tackle the disease and his imminent decline by writing frankly about the journey. O'Brien is a master storyteller. His story is naked, wrenching, and soul searching for a

generation and their loved ones about to cross the threshold of this death in slow motion. On Pluto: Inside the Mind of Alzheimer's is a trail-blazing roadmap for a generation—both a “how to” for fighting a disease, and a “how not” to give up! From the Trade Paperback edition. Este livro é antes de mais um livro técnico onde se abordam várias temáticas do audiovisual, tendo como principal preocupação a explicação de como as coisas acontecem nestas áreas. Com o

desenvolvimento das tecnologias destas áreas os profissionais esqueceram-se da essência do audiovisual e são por isso controlados pela tecnologia em vez de serem estes a manipulá-las. Como costume dizer nas aulas : "se o modo automático fosse bom não haveria técnicos de audiovisuais."

The lens is generally the most expensive and least understood part of any camera. In this book, Rudolf Kingslake traces the historical development of the various types of lenses from

Daguerre's invention of photography in 1839 through lenses commonly used today. From an early lens still being manufactured for use in low-cost cameras to designs made possible through such innovations as lens coating, rare-earth glasses, and computer aided lens design and testing, the author details each major advance in design and fabrication. The book explains how and why each new lens type was developed, and why most of them have since been abandoned. This authoritative history of lens

technology also includes brief DPI relate. His section on how biographies of several camera, computer monitor and outstanding lens designers and printer color calibration manufacturers of the past. works is explained so well, you'll never forget it (just think toast). It even has in-depth explanations on photo composition, HDR (High Dynamic Range) photography, depth of field, printing your images, publishing, and more. Luigi's English is pretty good yet his lovely Italian flavor and sense of humor still come through.

Few inventions have had as powerful an influence as the camera, and few modes of expression have enjoyed the enduring artistic, scientific, and popular appeal of photography. We are so focused on the products of the camera, the indelible images marking our lives and times, that it's easy to forget the instrument itself has a history. Now that history has been comprehensively traced for photography buffs and amateurs alike by Todd Gustavson, Curator of Technology at George Eastman House. In this stunning volume, hundreds of new and archival images from George Eastman House bring the story to life and provide an unmatched reference source. Vast in its scope, this groundbreaking book is an in-depth visual and narrative look at the camera, and consequently photography itself, as never before seen. - Jacket.
