Geographical Guide to Floras of the World John Wiley & Sons

Mythic discourses in the present day show how vernacular heritage continues to function and be valuable through emergent interpretations and revaluations. At the same time, continuities in mythic images, motifs, myths and genres reveal the longue dur é e of mythologies and their transformations. The eighteen articles of Mythic Discourses address the many facets of myth in Uralic cultures, from the Finnish and Karelian world-creation to Nenets shamans, offering multidisciplinary perspectives from twenty eastern and western scholars. The mythologies of Uralic peoples differ so considerably that mythology is approached here in a broad sense, including myths proper, religious beliefs and associated rituals. Traditions are addressed individually, typologically, and in historical perspective. The range and breadth of the articles, presenting diverse living mythologies, their histories and relationships to traditions of other cultures such as Germanic and Slavic, all come together to offer a far richer and more developed perspective on Uralic traditions than any one article could do alone.

'This volume is a massive leap forward over any previous synthesis of the subject and includes at the very minimum so much information that its academic and scientific value is self evident. The freshness and

profundity of Dumbrill's approach to the subject exceeds anything attempted before. 'The mythology of ancient Mesopotamia proves readable as tonal allegory when its numerology is decoded as tuning theory. By the third millennium BC both pentatonic and heptatonic tunings were quantified throughout the entire 12-tone gamut. Richard Dumbrill has documented the massive empirical experience with strings and pipes that makes this early musicalization of the universe believable.' The volume consists in 4 parts with foreword by Prof. Ernest McClain. The first is about the decipherment, translation and interpretation of the few theoretical cuneiform texts dating from the Old Babylonian period, about 2000 BC, to Neo Assyrian up to the mid first millennium BC. Dumbrill undertakes comparative analyses and criticism of various interpretations having preceded his own and introduces new material. The second part is about the Hurrian hymns, the earliest music ever written, circa 1400 BC, and are produced in their integrality. Attempts to the interpretation of Hymn H.6 are compared and followed by Dumbrill's methodology and interpretation. Each fragment of the collection is analyzed separately. The part concludes with statistical analyses attempting at the reconstruction of some Hurrian rules of composition. The third part consists in the organology with relevant philology and is the largest collection of the Mesopotamian instrumentarium. The last part is a unique lexicon of all known Mesopotamian terminology, with quotation of texts in which the philology appears. The book had been previously published under the title of 'The Musicology and Organology of the Ancient Near East' and now appears under its new title.

Kay Fisker (1893-1965) is considered one of the most influential Danish architects of the twentieth century, and yet there has existed until now no in-depth English-language study of his works and writing. Published as part of the Bloomsbury Studies in Modern Architecture series, which brings to light the work of significant yet overlooked modernist architects, this book examines Fisker's key projects – from his early railway stations and innovative housing projects to the Danish Academy in Rome – and analyses his work as a historian and writer. Fisker's output is closely associated with the functional tradition, a hybridization of international modernism and regional architectural typologies, and this book shows how his architectural poetics can be understood as an amalgamation of an ideal order with the contingent conditions of landscapes and urban sites. Hybridization is not only a valuable notion for understanding Fisker, the book argues, it can also be applied to an understanding of modernist architecture as a whole, with its various expressions, agendas and tensions both regionally and internationally.

This book provides both a handy reference to the scientific names of plants and a clearly written account of the ways in which the naming of plants has changed with time and why these changes were necessary. It deals with the problems of using common names for plants against the historical background of our increasing discrimination of kinds of plants. It then goes on to consider landmarks in the standardization of both common and 'scientific' names and the development of internationally agreed principles governing the format and use of names in botany, silviculture, agriculture and horticulture. From the alphabetical list the reader may interpret the scientific names of plants from any part of the world. For this second edition a number of changes and corrections in both parts have been made. The author has attempted to keep the first part acceptable to the amateur gardener by resisting a temptation to make it a definite guide to the International Code of Botanical Nomenclature. Others have done this already and with great clarity. Revision has allowed the inclusion of a brief comment on both synonymous and illegitimate botanical names and reference to recent attempts to accommodate the various traits and interests in the

naming and names of cultivated plants.

Photographs of selected Islamicate globes from the thirteenth to the nineteenth centuries, as well as line drawings based on written descriptions, accompany the historical and analytical discussion. The fourth chapter on iconography analyses the constellation figures on the Smithsonian globe from the perspective of an art historian. This chapter was contributed by Andrea P.A. Belloli. The second major part of the study presents a discussion of the star names engraved on the Mughal globe, tracing the origins of the term in Greek mythology or early Bedouin constellation outlines. The discussion of each constellation is accompanied by a photograph of the constellation as depicted on the Smithsonian globe. An account of lunar mansions is included as background to early Bedouin asterisms, which greatly affected later Islamicate star names and eventually "modern" western star names.

The first volume of Agni: The Vedic Ritual of the Fire Altar, contains a discussion of the place of the Agnicayana in the Vedic srauta tradition, its textual loci, traditional and modern interpretations of its origins and significance and an overview of the Nambudiri Vedic tradition. The bulk of the volume, written in close collaboration with C.V.

Somayajipad and M.Itti Ravi Nambudiri, is devoted to a detailed description of the 19875 twelve-day performance, richly illustrated with tipped-in photographs, mostly in colour and almost all by Adelaide de Menil. There are numerous text illustrations, tables and maps. The mantras are published in Devanagari and translation. The second volume, edited with the assistance of Pamela MacFarland, contains contributions by an international galaxy of scholars on archeology, the pre-Vedic Indian background, geometry, ritual vessels, music, Mudras, Mimamsa, a survey of Srauta traditions in recent times, the influence of Vedic ritual in the Homa traditions of Indonesia, Tibet, China, Japan and related topics. There are translations of the relevant Srauta Sutras of Baudhayana (together with Calanda's text) and the Jaiminiya (with Bhavatrata's commentary) as well as the Kausitaki Brahmana; and a survey of the project with an inventory of the films and tape recording made in 1975.

The book is journey through 5000 years of evolution of Hinduism, and is outcome of seven years of study to understand the roots of Hinduism. Tracing the genesis of Hinduism to pre-Indus Valley period, the book explains Hindu, Hinduism and Sanatana Dharma, before it takes one through Hinduism's oldest scriptures - the four Vedas, the four components of each Veda, and what they contain. How all original translations of Vedic texts were done by Western Sanskrit scholars, and why their works have left scope for doubt about the fidelity of translations. The yajnas (yagya) like Ashvamedha, Rajsooya, Vajpeya, etc., about which we only hear on TV serials and

talk shows, have been demystified. The reader will be taken aback reading the sheer size and scale of Soma yajna, described step by step, in great detail. Hinduism's journey to the Age of Reason, the Upanishads, its encounter with Buddhism, and its transformation into idol worshipping society with many gods and a multitude of stories about its millions of gods is lucidly explained. Puranas, what they contain and what was the reason they were created, has been described and explained next. Hinduism's journey to its modern form - idol worship, the modern puja, detailed description of puja and Sanskaras like Vivaha, their detailed description, the meaning of each action and how they are conducted, the gift to the priest, types of idols, their consecration, all are explained to help a reader understand the why and the how of what we do as a Hindu. The book concludes with a discussion of - Do mantras have power? & Do rituals have meaning?

There is a growing need for appropriate management of aquatic plants in rivers and canals, lakes and reservoirs, and drainage channels and urban waterways. This management must be based on

a sound knowledge of the ecology of freshwater plants, their distribution and the different forms of control available including chemical, physical, biological and biomanipulation. This series of papers from over 20 different countries was generated from the highly successful European Weed Research Society symposia on aquatic plant management, this being the ninth. The contributions provide a valuable insight into the complexities involved in managing aquatic systems, discuss state-of-the-art control techniques such as biomanipulation using fish and waterfowl and the use of straw, and deal with patterns of regrowth and recovery post-management. Careful consideration is given to the use of chemicals, a practice which has come under scrutiny in recent years. Underpinning the development of such control techniques is a growing body of knowledge relating to the biology and ecology of water plants, including growth responses under different trophic conditions, the impact of pollution, and aspects of photosynthesis. The authorship of the papers represents the collective wisdom of leading scientists and experts from fisheries agencies, river authorities, nature conservation agencies, the agrochemical industry and both governmental and non-governmental organisations.
