The New European Criminology gathers together leading criminologists from all over Europe to consider crime and responses to crime within and across national borders. For the first time it allows students to experience the most exciting work in European criminology and to compare approaches to crime in different parts of Europe. The five sections of the book look at: * the effects of European harmonisation on crime * criminal justice, law enforcement and penal reform * organised crime, from the Mafia in Italy to drug running in the Balkans * local crime in international contexts * possible future directions for criminology and some suggestions for a new criminology of war.

The critics who despair of the coming of imaginative, charismatic leaders to replace the so-called manipulative caretakers of American corporations don't tell us much about what leadership actually is, or, for that matter, what management is either. Now, John P. Kotter, who focused on why we have a leadership crisis in *The Leadership Factor* shows here, with compelling evidence, what leadership really means today, why it is rarely associated with larger-than-life charismatics, precisely how it is different from management, and yet why both good leadership and management are essential for business success, especially for complex organizations operating in changing environments. Leadership, Kotter clearly demonstrates, is for the most

part not a god-like figure transforming subordinates into superhumans, but is in fact a process that creates change -- a process which often involves hundreds or even thousands of "little acts of leadership" orchestrated by people who have the profound insight to realize this. Building on his landmark study of 15 successful general managers, Kotter presents detailed accounts of how senior and middle managers in major corporations, in close concert with colleagues and subordinates, were able to create a leadership process that put into action hundreds of commonsense ideas and procedures that, in combination with competent management, produced extraordinary results. This leadership turned NCR from a loser to a big winner in automated teller machines, despite intense competition from IBM. The same process at American Express and SAS helped businesses grow dramatically despite the fact that they were "mature" and "commodity-like." Kotter also shows how leadership turned around operations at P&G and Kodak; produced huge business successes at PepsiCo, ARCO, and ConAgra; and made the impossible occasionally happen at Digital. Thousands of companies today are overmanaged and underled, John Kotter concludes, not because managers lack charisma, but because far too few executives have a clear understanding of what leadership is and what it can accomplish. Without such a vision, even the most capable people have great difficulty trying to lead effectively and to create the cultures which will help others to lead.

Solid State Physics is a textbook for students of physics, material science, chemistry, and engineering. It is the state-of-the-art presentation of the theoretical foundations and application of the quantum structure of matter and materials. This second edition provides timely coverage of the most important scientific breakthroughs of the last decade (especially in low-dimensional systems and quantum transport). It helps build readers' understanding of the newest advances in condensed matter physics with rigorous yet clear mathematics. Examples are an integral part of the text, carefully designed to apply the fundamental principles illustrated in the text to currently active topics of research. Basic concepts and recent advances in the field are explained in tutorial style and organized in an intuitive manner. The book is a basic reference work for students, researchers, and lecturers in any area of solid-state physics. Features additional material on nanostructures, giving students and lecturers the most significant features of low-dimensional systems, with focus on carbon allotropes. Offers detailed explanation of dissipative and nondissipative transport, and explains the essential aspects in a field, which is commonly overlooked in textbooks. Additional material in the classical and quantum Hall effect offers further aspects on magnetotransport, with particular emphasis on the current profiles. Gives a broad overview of the band structure of solids, as well as presenting the foundations of the electronic band structure. Also features reported with new and revised material,

which leads to the latest research

The Second Edition of Identity Development: Adolescence Through Adulthood presents an overview of the five general theoretical orientations to the question of what constitutes identity, as well as the strengths and limitations of each approach. The volume then proceeds to describe key biological, psychological, and contextual issues during each phase of adolescence and adulthood.

Predictive and Optimised Life-Cycle Management sets out methodologies to meet the demands of the current trend towards sustainable civil engineering and building. Encompassing all aspects of construction practice, from design through to demolition and the recycling of materials, Sarja provides tools for optimal property-value protection, including a description of an integrated and predictive Life-Cycle Maintenance and Management Planning System (LMS), which employs a wide range of techniques. Clear and practical, this guide provides effective methodology required to change a reactive system of management to a predictive one, which will benefit practitioners and students involved in construction, from the architect to local and government authorities; from design engineers to facility managers.

Interest and fascination in Achaemenid Persia has burgeoned in recent years. It is time for a major new appraisal of the glorious civilization founded by Cyrus the Great and continued by his successors, the Great Kings Darius I, Xerxes and Artaxerxes I. This volume offers precisely that: a sustained and comprehensive overview of the field of Achaemenid studies by leading scholars and experts. It discusses all aspects of Achaemenid history and archaeology between 550 BCE and 330 BCE, and embraces the whole vast territory of the Persian Empire from North Africa to India and from Central Asia to the Persian Gulf. Topics covered in this title include aspects of Achaemenid religion, administration, material culture, ethnicity, gender and the survival of Achaemenid traditions. The publication of the book is an event: it represents a watershed not only in better appreciation and understanding of the rich and complex cultural heritage established by Cyrus, but also of the lasting significance of the Achaemenid kings and the impact that their remarkable civilization has had on wider Persian and Middle Eastern history. In today's industrial manufacturing Product Lifecycle Management (PLM) is essential in order to cope with the challenges of more demanding global competition. New and more complex products must be introduced to markets faster than ever before. Companies form large collaborative networks, and the product process must flow flexibly across company borders. This first book on Product Lifecycle Management in English language is designed to introduce the reader to the basic terms and fundamentals of PLM and to give a solid foundation for starting a PLM development project. It gives ideas and examples how PLM can be utilized in various industries. In addition, it also offers an insight into how PLM can assist in creating new business opportunities and in making real eBusiness possible.

This book presents the results of an international research project designed to evaluate how effectively people use information and IT to improve business performance. In particular it looks at three dimensions - information behavior and values; information management practices; and IT practices - and their relationship to business performance. The book combines a focus on business relevance with strong empirical research.

Proof of the efficacy of dermatological products is a prerequisite for clinical testing and registration. Now, efficacy claims for cosmetics must be equally substantiated. This book provides a concise, practical but comprehensive overview of experimental

models used to screen, develop and select dermatological and cosmetic formulations.

The authors are recognized specialists in their field and use a standardized approach to the projects facilitating the reading for the stressed scientist, for the R+D managers general view as well as for the beginners in the field.

This book provides a detailed review of many different aspects of pathogens, from the effects of single base pair mutations to large-scale control options, bringing into a single volume over 100 years of findings from thousands of researchers worldwide. Diseases caused by soft rot Pectobacteriaceae (SRP) are a major cause of loss to crop, vegetables and ornamental plants worldwide, and have been found on all continents except Antarctica. While different aspects of the SRP have appeared in other books on plant disease, no book, until now, has been dedicated solely to them.

Educational design research blends scientific investigation with the systematic development and implementation of solutions to educational challenges. Empirical inquiry is conducted in real learning settings – not laboratories – to craft effective solutions to the complex challenges facing educational practitioners. At the same time, the research is carefully structured to produce theoretical understanding that can serve the work of others. Conducting Educational Design Research, 2nd Edition has been written to support graduate students as well as experienced researchers who are new to this approach. Part I describes the origins, outcomes, and generic approach. Part II discusses the core processes of the generic approach in detail. Part III recommends how to propose, report, and advance educational design research. In addition to expanded treatment of research goals and practicalities, more examples, and attention to design-based

implementation research, this new edition features enhanced guidance. For each of the four core processes, this volume offers: assessment tools detailed, behind-the-scenes descriptions of actual project work examples of how specific theories have been used to enrich the work. For decades, policies for educational research worldwide have swung back and forth between demanding rigor above all other concerns, and increasing emphasis on impact. These two qualities, rigor and impact, need not be mutually exclusive. This volume supports readers in grasping and realizing the potential of educational design research. It demonstrates how rigorous and relevant investigation can yield both theoretical understanding and solutions to urgent educational challenges.

This is the first comprehensive book to cover all aspects of word sense disambiguation. It covers major algorithms, techniques, performance measures, results, philosophical issues and applications. The text synthesizes past and current research across the field, and helps developers grasp which techniques will best apply to their particular application, how to build and evaluate systems, and what performance to expect. An accompanying Website extends the effectiveness of the text.

Until about two decades ago, the study of writing systems and their relationship to literacy acquisition was sparse and generally modeled after studies of English language learners. This situation is now changing. As the worldwide demand for literacy continues to grow, researchers from different countries with different language backgrounds have begun examining the connection between their writing systems and literacy acquisition. This text, which derives from a NATO sponsored conference on orthography and literacy, brings together the research of 70 scholars from across the world--the largest assemblage of such experts to date. Their findings are grouped into three parts, as follows: Part I,

Literacy Acquisition in Different Writing Systems, describes the relationship between orthography and literacy in twenty-five orthographic systems. This section serves as a handy reference source for understanding the orthographies of languages as diverse as Arabic, Chinese, English, Icelandic, Kannada, and Kishwahili. Part II, Literacy Acquisition From a Cross-Linguistic Perspective, makes direct comparisons of literacy acquisition in English and other orthographic systems. The overall conclusion that emerges from these eight chapters is that the depth of an orthographic system does influence literacy acquisition primarily by slowing down the acquisition of reading skills. Even so, studies show that dyslexic readers can be found across all orthographic systems whether shallow or deep, which shows that dyslexia also has internal cognitive and biological components. Part III, Literacy Acquisition: Instructional Perspectives, explores literacy acquisition from developmental and instructional perspectives and ends with a look into the future of literacy research. This Handbook is appropriate for scholars, researchers, and graduate students in such diverse fields as cognitive psychology, psycholinguistics, literacy education, English as a second language, and communication disorders.

This book is based on a study of the archaeological evidence deriving from the Arjan tomb, an undisturbed elite burial found in 1982 near the town of Behbahan in southwestern Iran. The fact that this burial can be confidently dated to ca. 600-550 BC presents an exceptional opportunity to reassess former views regarding the survival of Elamite traditions and the emergence of the Persian Empire. It is within this general framework that the fortuitous discovery of the Arjan tomb emerges as potentially one of the major archaeological discoveries of recent times. The present study offers a comprehensive

analysis of the artistic and historical characteristics of the late Neo-Elamite period, and, by the same token, provides a new foundation for the genesis of the art of the Achaemenid Persian Empire.

Land degradation caused by salinity and waterlogging is a global problem afflicting about one billion hectares and endangering the food security of at least 75 countries. Since the social, economic and environmental costs of on and/off-farm reclamation techniques are high, agroforestry is now emerging as a potential tool, not only for arresting salinity and waterlogging, but also for other environmental services like mitigating climate change, sequestering carbon and restoring biodiversity. This publication addresses the vital issues, principles and practices related to rehabilitation using agroforestry and includes many site-specific case studies from a number of the world ' s typical catchments. Written by leading researchers, the book is a must, not only for scientists whose research interests lie in soil salinity, waterlogging and poor-quality waters, but also policy makers, environmentalists, students, and educationists alike. More importantly, it contributes to reversing the salinity trends and ensuring the livelihoods of resource-poor farming families living in these harsh agro-ecosystems.
