The rules of business are changing dramatically. The Aspen Institute's Judy Samuelson describes the profound shifts in attitudes and mindsets that are redefining our notions of what constitutes business success. Dynamic forces are conspiring to clarify the new rules of real value creation—and to put the old rules to rest. Internet-powered transparency, more powerful worker voice, the decline in importance of capital, and the complexity of global supply chains in the face of planetary limits all define the new landscape. As

executive director of the Aspen Institute Business and Society Program, Judy Samuelson has a unique vantage point from which to engage business decision makers and identify the forces that are moving the needle in both boardrooms and business classrooms. Samuelson lays out how hard-to-measure intangibles like reputation, trust, and loyalty are imposing new ways to assess risk and opportunity in investment and asset management. She argues that “ maximizing shareholder value ” has never been the sole objective of effective businesses while observing that shareholder theory and the practices that keep it in place continue to lose power in both business and the public square. In our globalized era, she demonstrates how expectations of

corporations are set far beyond the company gates—and why employees are both the best allies of the business and the new accountability mechanism, more so than consumers or investors. Samuelson's new rules offer a powerful guide to how businesses are changing today—and what is needed to succeed in tomorrow's economic and social landscape.

The Law of Armed Conflict provides a complete operational scenario and introduction to the operational organization of United States forces. The focus remains on United States law perspective, balanced with exposure to areas where the interpretation of its allied forces diverge. Jus ad bellum and jus in bello issues are addressed at length. The casebook comes to students with stunning authority. All of the authors are active or

retired United States Army officers with more than 140 years of collective military operational experience among them. Several have experience in both legal and operational assignments as well. They deliver a comprehensive coverage of all aspects of the law of armed conflict, explaining the difference between law and policy in regulation of military operations.

14th International Symposium on Process Systems Engineering, Volume 49 brings together the international community of

researchers and engineers interested in computing-based methods in process engineering. The conference highlights the contributions of the PSE community towards the sustainability of modern society and is based on the 2021 event held in Tokyo, Japan, July 1-23, 2021. It contains contributions from academia and industry, establishing the core products of PSE, defining the new and changing scope of our results, and covering future challenges. Plenary and keynote lectures discuss real-world challenges (globalization, energy, environment and health) and contribute to discussions on the widening scope of PSE versus the consolidation of the core topics of PSE. Celestial navigation can be a daunting and intimidating subject for some to learn. There are many comprehensive books on the subject which I recommend, but the beginning student can be overwhelmed by the vast amount of information in these texts. To initially learn celestial navigation, sometimes less is more. By clearing a path through the esoteric details and providing just enough information with concise explanations, simple visual aids and examples, learning celestial navigation becomes easier and more enjoyable. The goal of this booklet is to serve as a launch pad into the subject which may be all that many yachtsmen need. For those who want to learn more, this booklet will prepare you for more in-depth studies. Includes full-color 3-D illustrations. Forward by John Kretschmer
