The Development of the German Air Force, 1919 to 1939, first published in 1968, written by Professor Richard Suchenwirth, and revised and edited by Mr. Harry R. Fletcher, is one of a series of historical studies written for the United States Air Force Historical Division by men who had been key officers in or outstanding authorities on the German Air Force during World War II. The overall purpose of the series is twofold: 1) To provide the United States Air Force with a comprehensive and, insofar as possible, authoritative history of a major air force which suffered defeat in World War II, a history prepared by many of the principal and responsible leaders of that air force; 2) to provide a firsthand account of that air force's unique combat in a major war, especially its fight against the forces of the Soviet Union. This series of studies therefore covers in large part virtually all phases of the Luftwaffe's operations and organization, from its camouflaged origin in the Reichswehr, during the period of secret rearmament following World War I, through its participation in the Spanish Civil War and its massive operations and final defeat in World War II, with particular attention to the air war on the Eastern Front.

Addressing design for automated and manual assembly processes, Assembly Automation and Product Design, Second Edition examines assembly automation in parallel with product design. The author enumerates the components, processes, performance, and comparative economics of several types of automatic assembly systems. He provides information on equipment such as transfer devices, parts feeders, feed tracks, placing mechanisms, and robots. Presenting detailed discussions of product design for assembly, the book contains over 500 drawings, tables, and equations, and numerous problems and laboratory experiments that help clarify and reinforce essential concepts. Highlighting the importance of well-designed products, the book covers design for manual assembly, high-speed automatic and robot assembly, and electronics assembly. The new edition includes

the popular Handbook of Feeding and Orienting Techniques for Small Parts, published at the University of Massachusetts, as an appendix. This provides more than 100 pages packed with useful data and information that will help you avoid the costly errors that often plague high-volume manufacturing companies. In today's extremely competitive, highly unpredictable world, your organization needs to constantly find new ways to deliver value. Performing the same old processes in the same old ways is no longer a viable option. Taking an analytical yet practical approach to assembly automation, this completely revised second edition gives you the skill set you need not only to deliver that value, but to deliver it economically and on time.

This volume offers an insight into the iconic Mauser family of German bolt-action rifles. Drawing on first-hand accounts of the weapons in combat and primary sources regarding their mechanical performance, this fully illustrated study charts the Mauser's origins, combat record and lasting influence. It explores the full range of Mauser rifles, beginning with the hugely successful Gew 98, which entered service in the time of the Kaiser, provided the basis for the US Springfield M1903 and equipped combatants such as the South African Boers. It also investigates the Kar 98k, which was still in front-line use with Wehrmacht troops in 1945, saw use with Mexican and Yugoslavian forces, and even played a role in the 1990s Balkan conflicts in the hands of snipers. Featuring expert analysis, specially commissioned artwork and gripping first-hand accounts, this volume is ideal for anyone seeking an understanding of these sturdy and accurate rifles' unique place in the history of small-unit tactics in the 20th century.

This book presents firsthand insights into strategies and approaches for the commercial aerospace supply chain in response to the numerous changes that airlines, aircraft OEMs and their suppliers have experienced over the past few decades. In doing so, it investigates the entire product value chain. Accordingly, the chapters address the challenges of configuration and demand, and highlight the specificities of customization in the aviation industry. They analyze component manufacturing, share valuable insights into assembly and integration activities, and describe

aftermarket business models. In order to ensure more varied and balanced coverage, the book includes contributions by researchers, suppliers, and experts and practitioners from consulting companies and the aircraft industry. Taken together, they provide a holistic perspective on the transformation drivers and the innovations that have either been implemented or will be adopted in the near future. The book introduces and describes new concepts and innovations such as 3D printing, E2E demand management, digital production, predictive maintenance and open innovation in general, supplementing them with sample industrial applications from the aviation sector.

The International Conference on Production Research has a good tradition: The first Conference was held in Birmingham 1971 with 61 participants. With respect to the decision that the Conference should be held every second year, by this time the Conference has been held in the following countries: Birmingham (1971, UK), Copenhagen (1973, Denmark), Amhurst (1975, USA), Tokyo (1977, Japan), Amsterdam (1979, The Netherlands), Novi Sad (1981, Yugoslavia), Windsor (1983, Canada), Stuttgart (1985, Germany), and the next Conference will take place in Cincinnati (1987, USA). The number of submitted abstracts and papers was continuously increasing such that the Programme Committee of this actual 8th Conference on Production Research has been forced to introduce a further refereeing procedure. Each submitted abstract was presented to at least two referees. This resulted not only in a reduction of the number of presented full papers and poster contributions but, as the Programme Committee and the Editors hope, it led also to a considerable increase in the scientific quality of this 8th International Conference on Production Research. The preceding conference in Windsor, Canada, was dedicated to the topic: Production Research as a Means of Productivity Improvement. We don't believe that this statement has become untrue in the meanwhile.
