This book adopted 66 brand crisis events as research samples taking place from 2010 to 2016 on social media (Chinese Weibo), performs research on influence mechanism of brand-crisis information-sharing behavior on social media from contextual perspective. The book explores into the fluctuation characteristics of information-sharing behavior, the contextual influence factors, both the static and dynamic mechanism of information-sharing behavior, and regulation measures of crisis

information sharing behavior. The important features of the book are reflected in accurate analysis of the autocorrelation, trend characteristics, periodic characteristics and cluster characteristics of the fluctuation of crisis information sharing behavior, and deep exploration of dynamic mechanism and static mechanism of the time lag characteristics, impulsive disturbance, and marginal influence of the impact of information sharing behavior from perspective of situational factors. The book mainly focuses on the field of brand crisis management, and construct the formation and evolution mechanism of brand crisis information sharing behavior from both vertical and horizontal dimensions through a combination of theoretical exposition and case analysis, so that readers can got a clear understanding of brand crisis information communication and management through dimension reduction. The book can be used as a textbook for undergraduates and postgraduates in economics and management in colleges and

universities, can also be a reference for business managers, scientific researchers and others interested in the field of crisis management.

Essentials of Applied Econometrics MIT Press

Applied Econometric Techniques is designed to bridge the gap between textbook theory and the advanced applied work required of professional econometricians. The authors emphasize the intuitive aspects of theoretical results to provide insight into solutions of "real world" applied problems. Drawing on their own experience in working for the Bank of England, the International Monetary Fund, the London Business School, and other public and private organizations, the authors use a wealth of examples to illustrate the pitfalls as well as the advantages of sophisticated applied techniques. An introductory chapter provides a "refresher course" in standard econometrics for the professional econometricians, graduate students, and advanced undergraduates for whom the volume is intended. The authors then present recent theoretical innovations such as co-integration, error correction models, ARCH models, disequilibrium Maximum Likelihood models, and the Kalman Filter. In addition, they discuss the underlying philosophy of dynamic modeling that has grown out of the work of several economists at the London School of Economics.

For a one-year graduate course in Econometrics. This text has two objectives. The first is to introduce students to applied econometrics, including basic techniques in regression analysis and some of the rich variety of models that are used when the linear model proves inadequate or inappropriate. The second is to present students with sufficient theoretical background that they will recognize new variants of the models learned about here as merely natural extensions that fit within a common body of principles. The Fifth Edition features a complete update of techniques and developments, a reorganization of material for improved presentation, and new material and applications.
