In the United States, asthma affects 14% of all children under18 years of age (Bloom, Jones, and Freeman, 2013). Children in the 0-4 year age group are the most vulnerable asthmatic population (National Asthma Education Program Panel [NAEPP], 2007). Children in this age group are at risk for permanent lung damage and the development of severe persistent asthma due to their underdeveloped physiology (The Childhood Asthma Management Program [CAMP], 2000; Martinez et al., 1995; Morgan et al., 2005; Zeiger et al., 1999). Asthma morbidity and mortality rates have increased in the 0-4 year old population even though the knowledge is available for the proper management of the disease (Akinbami et al., 2012). The increase in asthma morbidity and mortality in 0-4 year old children may be related to incomplete or inadequate parent/caregiver asthma education. Studies indicated that parent/caregivers have not received appropriate education such as administration of medications, a written asthma action plan, and management of asthma exacerbations from a health care provider (McMullen et al., 2007; Szilagyi et al., 2000). The purpose of this study was to examine the effect of asthma self-management education, received by the parents/caregiver's of children aged 4 and younger, on the number emergency department/urgent care visits for asthma. The Theory of Dependent Care (Taylor, Renpenning, Geden, Neuman, and Hart, 2001) provided the framework to guide the study. Data from the 2011 Asthma Call Back Survey [ACBS] from the Centers for Disease Control and Prevention (2013a) were used for secondary data analysis to measure the effect of asthma management education of parent/caregivers of 0-4 year old children on the number of emergency department/urgent care visits. The sample size consisted of 148 parent/caregivers of 0-4 year old asthmatic children who participated in the 2011 ACBS. Non-parametric tests were used to determine if differences among the independent variables of instruction on the recognition of the signs and symptoms of an asthma exacerbation, the use of a metered-dose inhaler, the receipt of a written asthma action plan, and peak-flow meter instruction affected the number of emergency department/urgent care visits. The results suggested that there was no difference in the number of emergency department/urgent care visits in those children whose parent/caregivers who received asthma management instruction and those who did not. The age of the child, disease phenotype, type, quality, and quantity of education received may have affected study results.

The Asthma Educator's Handbook StatPearls Publishing, LLC

As the series title implies each Clinician's Desk Reference is a practical resource and a daily aid for physicians in the hospital setting and in primary care. Asthma is one of the most important chronic disorders in the developed world. Evidence from around the world shows the prevalence of asthma has increased considerably since 1975, and now affects around 7.2% of the world population (about 100 million individuals). In the UK asthma is now the most common chronic disease affecting all age groups with approximately 11% of the population being diagnosed as having asthma at some time in their lives.

Understanding of the basic mechanisms involved in the pathogenesis of asthma has improved dramatically over the past 20 years. Along with this increase in basic scientific knowledge, randomized clinical trials have produced evidence to guide clinicians in how to manage patients with asthma. The book covers epidemiology, diagnosis and management, and takes a look at future developments. The authors highlight the under diagnosis of occupational asthma and emphasize the importance of effective patient education, particularly asthma action plans. There are ten clinical cases dealing with common diagnostic and management problems, frequently asked questions and appendices containing resources for patients and clinicians including useful websites, information leaflets and major references.

Prepare for success on respiratory therapy credentialing exams! Updated to reflect the 2009 National Board of Respiratory Care (NBRC) content outlines, Sills' The Comprehensive Respiratory Therapist's Exam Review, 5th Edition helps you review for both entry and advanced level credentialing exams. It covers every testable subject, providing content review, self-assessment questions, and study hints. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Unique! Exam Hint boxes point out subjects that are frequently tested, helping you study, plan your time, and improve your test-taking skills. Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). NBRC content outline coding provides a code for each topic so you

can be sure that you have covered every topic that might appear on the exam. CRT and RRT level codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Updated content reflects the NBRC's new examination content outlines, so you get an accurate, current review. New coverage includes subject areas such as CPAP/BiPAP titration during sleep, hemodynamic monitoring, hyperinflation therapy, laryngeal mask airway, high frequency ventilation, oxygen titration, thoracentesis, ultrasound, and ventilator-associated pneumonia protocols.

Asthma, Health, and Society A Public Health Perspective  
Edited by Andrew Harver, University of North Carolina at Charlotte, Charlotte Harry Kotses, Ohio University, Athens  
Asthma, Health, and Society is a comprehensive, current resource on this complex disease—its scope, human costs, and management—from a combined social ecology/public health perspective. This important and unique book proposes a concerted, multifaceted response and sets out the foundation for shaping this response, comprising individual and large-scale assessment, education, advocacy, and multiple forms of intervention. In clear, authoritative detail enhanced by figures, graphs, and references, contributors explain where universal standards need to be set, alliances need to be built (such as among agencies and institutions in a community), and what is currently known about: Pathophysiology, epidemiology, and social impact of asthma. Genetic and environmental factors; protective factors and risk markers. Effects in women, minorities, children, teens, and elders. Medical management, self-management, and home monitoring. Evidence-based interventions at the family, school, and community levels. Screening guidelines, compliance issues, and more. In the absence of a cure or clear-cut causes, Asthma, Health, and Society offers the most robust compilation of practical knowledge on its subject to benefit the range of public health and asthma professionals, researchers, teachers, and students  
The Effect of Instruction of Parent/caregivers of 0-4 Year Old Asthmatic Children on Asthma Self-management Education and the Number of Emergency Department/urgent Care Visits CRC Press

With patients leaving the hospital sicker and more care being done in outpatient settings or at home, patients need to become active, informed participants on their health care team. This one-of-a-kind text provides unique advice to help nurses apply their knowledge and skills to teaching patients in the clinical setting with specific diseases, including special populations. The book is organized into two basic sections - the first describes the theories and process of learning and teaching, and the second focuses on the major fields of patient education practice in place today. The new case study approach also makes it easy for students to understand how to apply teaching strategies to specific patient types resulting in better informed patients and a more positive teaching/learning experience. Covers a variety of learning theories and concepts, as well as strategies for applying them in patient teaching. Uses evidence-based patient education practice, with extensive citations to the research base. Presents key issues in patient education such as literacy, use of patient decision aids, and multiple patient conditions for which organized patient education should be developed. Includes study questions with

suggested answers. Teaching basics streamlined for use as the main text for a course or as a supplement to any clinically oriented course. Includes multiple case examples, at every stage of the teaching process, which students can use as models to guide their own practice. New case study approach provides multiple case examples enabling readers to understand how to apply teaching strategies to specific patient types and settings. Now includes significant content in patient self-management of chronic conditions, the largest growing area of patient education.

This book comprehensively presents all the necessary information health professionals need to become Certified Asthma Educators. Competent asthma educators must possess a number of skills: they must have appropriate and sound medical and pharmaceutical knowledge; be proficient and effective educators who can influence their patients' behaviors for the better; and, finally, they need the administrative and organizational skills needed to set up and run efficient clinics at their places of work.

The book is divided into three sections to meet those needs: Asthma: The Fundamentals; The Role of Education; and, The Effective Asthma Educator. The first section covers clinical knowledge of asthma, with chapters including lung structure and function, clinical presentation of asthma, and environmental issues in asthma management. The second section delves into the role of educating patients and teaches readers how to best do that with an integrated approach between physician, educator, and patient. The third section looks further into educating techniques with a view of the learning process, considerations for instruction locations, and the role the educator plays overall. The final chapter in the book presents example cases for readers to assess the knowledge they have learned throughout. This second edition serves as both textbook and study guide for certification as well as a long-term reference publication. It has been fully updated from the previous edition with the latest treatment guidelines, medications, and disease monitoring methods. This is an ideal guide for asthma educators, those seeking NAECB certification, and any health professional involved with individuals who have asthma.

Tintinalli's Emergency Medicine: A Comprehensive Study Guide, Seventh Edition Springer Nature

Respiratory disease is the most common reason for admission to intensive care, and advanced respiratory support is one of the most frequently used interventions in critically ill patients. A clear understanding of respiratory disease is the cornerstone of high quality intensive care. Although a plethora of literature is available, both in print and online, finding the necessary relevant information can be difficult and time consuming. This handbook provides comprehensive clinical detail in an easily readable format. It is written by practising clinicians and has both in-depth theoretical discussion and practical management advice. The book is divided into sections: Section 1 deals with the approach to the patient with respiratory failure - including pathophysiology, investigation and diagnosis Sections 2 covers non invasive treatment modalities Sections 3 and 4 examine invasive ventilation in detail. Section 3 considers the principles of mechanical ventilation while section 4 deals with individual ventilator modes Section 5 discusses the management of the ventilated patient including sedation, monitoring, asynchrony, heart - lung interaction, hypercapnia and hypoxia, complications, weaning and extubation. It also has chapters on areas less frequently covered such as humidification, suction, tracheal tubes and principles of physiotherapy Section 6 is a comprehensive breakdown of each respiratory condition seen in ICU. This book is designed to bridge the gap between Intensive Care starter texts and all-encompassing reference textbooks. It is aimed at consultants and senior trainees in Intensive Care Medicine, senior ICU nursing staff, consultants in other specialties and allied healthcare professionals who have an interest in advanced respiratory critical care.
