Current Review of Asthma StatPearls Publishing, LLC

This book comprehensively presents all the necessary information health professionals need to become Certified Asthma Educators. Competent asthma educators must possess a number of skills: they must have appropriate and sound medical and pharmaceutical knowledge; be proficient and effective educators who can influence their patients behaviors for the better; and, finally, they need the administrative and organizational skills needed to set up and run efficient clinics at their places of work. The book is divided into three sections to meet those

needs: Asthma: The Fundamentals; The Role of Education; and, The Effective Asthma Educator. The first section covers clinical knowledge of asthma, with chapters including lung structure and function, clinical presentation of asthma, and environmental issues in asthma management. The second section delves into the role of educating patients and teaches readers how to best do that with an integrated approach between physician, educator, and patient. The third section looks further into educating techniques with a view of the learning process, considerations for instruction locations, and the role the educator plays overall. The final chapter in the book presents example cases for readers to assess

the knowledge they have learned throughout. This second edition serves as both textbook and study guide for certification as well as a long-term reference publication. It has been fully updated from the previous edition with the latest treatment guidelines, medications, and disease monitoring methods. This is an ideal guide for asthma educators, those seeking NAECB certification, and any health professional involved with individuals who have asthma.

A Companion to the 8th Edition StatPearls Publishing, LLC

Prepare for success on respiratory therapy credentialing exams! Updated to reflect the 2009 National Board of Respiratory Care (NBRC) content outlines, Sills' The Comprehensive Respiratory Therapist's Exam

Review, 5th Edition helps you review for both entry and advanced level credentialing exams. It covers every testable subject, providing content review, self-assessment questions, and study hints. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Unique! Exam Hint boxes point out subjects that are frequently tested, helping you study, plan your time, and improve your test-taking skills. Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). NBRC content outline coding provides a code for each topic so you can be sure that you have covered every topic that might appear on the exam. CRT and RRT level

codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Updated content reflects the NBRC's new examination content outlines, so you get an accurate, current review. New coverage includes subject areas such as CPAP/BiPAP titration during sleep, hemodynamic monitoring, hyperinflation therapy, laryngeal mask airway, high frequency ventilation, oxygen titration, thoracentesis, ultrasound, and ventilator-associated pneumonia protocols.

Intended for a multidisciplinary team of providers, Teaching Strategies for Health Care and Health establishes a foundation of how, why, what, and when people of all ages learn and how learning can positively affect a patient, a family, and a diverse community's ability to understand, manage, prevent and live well with their illness. Designed to give health professionals the tools

they need to provide total patient care, this unique resource presents a foundation as well as a selection of tools and teaching methodologies to promote health and prevention of illness. Unique to this resource are experience driven case studies demonstrating both successful and unsuccessful cases, helping health care professionals identify best practices to preserve and repeat, as well as analyze why unsuccessful efforts might have failed and how those cases could be handled differently.

Theory and Practice Jones & Bartlett Publishers

Enormous progress in asthma research has been made in the past 50 years,

including a greater understanding of its complex pathogenesis and new and more effective therapies. Consequently, the scientific literature has grown vast and can be difficult to integrate. With contributions from a distinguished panel of world-renowned authors, *Clinical Asthma: Theory and Practice* presents a comprehensive study of both the common and the more challenging problems faced by all health care personnel who treat patients with asthma. The book is divided into seven sections, starting with the basics of asthma and ending with a discussion on the approach to asthma worldwide and in the primary care setting. Reflecting a strong clinical emphasis, each chapter begins with a patient case study supported by essential background information on the basic

science and clinical decision-making process. This is followed by a discussion of clinical evaluation and management. The multidisciplinary coverage explores a range of topics including genetics, inflammation, immunology, and the identification of different endotypes. Using a bench-to-bedside approach, the book links basic science to the clinical management of asthma and explores options for improvement. The carefully selected authorship from experts worldwide presents a truly global outlook.

Hearings Before a Subcommittee of the Committee on Appropriations, United States Senate, One Hundred Second Congress, Second Session on H.R. 5677 StatPearls Publishing, LLC

In the United States, asthma affects 14% of all children under 18 years of age (Bloom, Jones, and Freeman, 2013). Children in the 0-4 year age group are the most vulnerable asthmatic population (National Asthma Education Program Panel [NAEPP], 2007). Children in this age group are at risk for permanent lung damage and the development of severe persistent asthma due to their underdeveloped physiology (The Childhood Asthma

Management Program [CAMP], 2000; Martinez et al., 1995; Morgan et al., 2005; Zeiger et al., 1999). Asthma morbidity and mortality rates have increased in the 0-4 year old population even though the knowledge is available for the proper management of the disease (Akinbami et al., 2012). The increase in asthma morbidity and mortality in 0-4 year old children may be related to incomplete or inadequate parent/caregiver asthma education. Studies indicated that parent/caregivers have not received appropriate education such as administration of medications, a written asthma action plan, and management of asthma exacerbations from a health care provider (McMullen et

al., 2007; Szilagyi et al., 2000). The purpose of this study was to examine the effect of asthma self-management education, received by the parents/caregiver's of children aged 4 and younger, on the number emergency department/urgent care visits for asthma. The Theory of Dependent Care (Taylor, Renpenning, Geden, Neuman, and Hart, 2001) provided the framework to guide the study. Data from the 2011 Asthma Call Back Survey [ACBS] from the Centers for Disease Control and Prevention (2013a) were used for secondary data analysis to measure the effect of asthma management education of parent/caregivers of 0-4 year old children on the number of emergency department/urgent care visits. The sample size consisted of 148 parent/caregivers of 0-4 year old asthmatic children who participated in the 2011 ACBS. Non-parametric tests were used to determine if differences among the independent variables of instruction on the recognition of the signs and symptoms of an asthma exacerbation, the use of a metered-dose inhaler, the receipt of a written asthma action plan, and peak-flow meter instruction affected the number of emergency department/urgent care visits. The results suggested that there was no difference in the number of emergency department/urgent care visits in those children whose

parent/caregivers who received asthma management instruction and those who did not. The age of the child, disease phenotype, type, quality, and quantity of education received may have affected study results.

StatPearls Publishing **Asthma Education** McGraw Hill Professional With patients leaving the hospital sicker and more care being done in outpatient settings or at home, patients need to become active, informed participants on their health care team. This one-of-a-kind text provides unique advice to help nurses apply their knowledge and skills to teaching patients in the clinical setting with specific diseases, including special populations. The book is organized into two

basic sections - the first describes the theories and process of learning and teaching, and the second focuses on the major fields of patient education practice in place today. The new case study approach also makes it easy for students to understand how to apply teaching strategies to specific patient types resulting in better informed patients and a more positive teaching/learning experience. Covers a variety of learning theories and concepts, as well as strategies for applying them in patient teaching. Uses evidence-based patient education practice, with extensive citations to the research base. Presents key issues in patient education such as literacy, use of patient decision aids, and multiple patient conditions for which organized patient education should be developed. Includes study questions with suggested answers. Teaching basics streamlined for use as the main text for a course or as a supplement to any clinically

oriented course. Includes multiple case examples, at every stage of the teaching process, which students can use as models to guide their own practice. New case study approach provides multiple case examples enabling readers to understand how to apply teaching strategies to specific patient types and settings. Now includes significant content in patient self-management of chronic conditions, the largest growing area of patient education.
