Policymakers and program managers are

continually seeking ways to improve accountability in achieving an entity's mission.

A key factor in improving accountability in achieving an entity's mission is to implement an effective internal control system. An effective internal control system helps an entity adapt to shifting environments, evolving demands, changing risks, and new priorities. As programs change and entities strive to improve operational processes and implement new technology, management continually evaluates its internal control system so that it is effective and updated when necessary. Section 3512 (c) and (d) of Title 31 of the United States Code

(commonly known as the Federal Managers' Financial Integrity Act (FMFIA)) requires the Comptroller General to issue standards for internal control in the federal government. Near Field Communication McGraw Hill Professional

Addressing general readers as well as software practitioners, "Software and Mind" discusses the fallacies of the mechanistic ideology and the degradation of minds caused by these fallacies. Mechanism holds that every aspect of the world can be represented as a simple hierarchical structure of entities. But, while useful in fields like mathematics and manufacturing, this idea is generally worthless, because most aspects of the world are too complex to be reduced to simple hierarchical structures. Our software-related affairs, in particular, cannot be represented in this fashion. And yet, all

programming theories and development systems, and all software applications, attempt to reduce real-world problems to neat hierarchical structures of data, operations, and features. Using Karl Popper's famous principles of demarcation between science and pseudoscience, the book shows that the mechanistic ideology has turned most of our software-related activities into pseudoscientific pursuits. Using mechanism as warrant, the software elites are promoting invalid, even fraudulent, software notions. They force us to depend on generic, inferior systems, instead of allowing us to develop software skills and to create our own systems. Software mechanism emulates the methods of manufacturing, and thereby restricts us to high levels of abstraction and simple, isolated structures. The benefits of software, however, can be attained only if we

start with low-level elements and learn to create complex, interacting structures. Software, the book argues, is a non-mechanistic phenomenon. So it is akin to language, not to physical objects. Like language, it permits us to mirror the world in our minds and to communicate with it. Moreover, we increasingly depend on software in everything we do, in the same way that we depend on language. Thus, being restricted to mechanistic software is like thinking and communicating while being restricted to some ready-made sentences supplied by an elite. Ultimately, by impoverishing software, our elites are achieving what the totalitarian elite described by George Orwell in "Nineteen Eighty-Four" achieves by impoverishing language: they are degrading our minds. Denying to the Grave Pearson Education This is an imminently practical workbook

An effective and enjoyable guide to help you feel in charge of yourself." ~ Bessel van der Kolk, M.D. This is the workbook that all mental health professionals wish they had at the beginning of their careers. Containing over 100 approaches to effectively deal with trauma, this workbook pulls together a wide array of treatments into one concise resource. Equally useful in both group and individual settings, these interventions will provide hope and healing for the client, as well as expand and solidify the professional's expertise. Tools and techniques drawn from the most effective trauma modalities: * Art Therapy * CBT * DBT * EFT * EMDR * Energy Psychology * Focusing * Gestalt

Therapy * Guided Imagery * Mindfulness * Psychodrama * Sensorimotor Psychology * Somatic Experiencing and Movement Therapies -BONUS: Book includes a link to all reproducible worksheets! Print and use with clients right away!! Praise for 101 Trauma-Informed Interventions: “ Linda Curran's unflinching energy and dedication to the healing of traumatized individuals has led to a voluminous, exciting, and comprehensive, 101 Trauma Informed Interventions. This workbook provides a plethora of effective tools -- traditional as well as innovative -- that can be used in whole or as a part of a course of therapy and also as self-help. The variety of options offered goes a long way towards dispelling the (unfortunately) popular misconception that there are only a limited number of interventions that help people to recover from trauma. Survivors as well as therapists who have been frustrated by the rigidity of strict adherence to evidence based practice will be greatly relieved to find a wealth of useful strategies to experiment, evaluate, and sort into a personally tailored trauma recovery program. This workbook is a god-send for the trauma field, expanding the possibilities for recovery in a most generous way. ” ~ Babette Rothschild, MSW author of *The Body Remembers* and *8 Keys to Safe Trauma Recovery* "Linda Curran has carefully and knowledgeably curated a practical, effective collection of interventions that actually work for trauma survivors. Any clinician committed to helping those

suffering from posttraumatic stress needs to have these tools and resources to draw upon, because standard talk therapy, nine times out of ten, is simply not going to cut it. These exercises will." ~ Belleruth Naparstek, LISW, author of *Invisible Heroes: Survivors of Trauma and How They Heal* "Drawing from the whole spectrum of trauma-based therapies, Linda Curran has compiled a sampling of practical exercises designed to help therapists and their clients better navigate the mine field that trauma work can be and find the path to healing. " ~ Richard Schwartz, Ph.D. author of *Internal Family Systems Therapy* "101 Trauma-Informed Interventions provides an accessible functional "playbook" for therapists committed to the rehabilitation of the client with a trauma history. In a readable volume Curran integrates diverse approaches of treatment and emphasizes the unique role that trauma plays in mental health. Underlying this eclectic strategy is the common theme emphasizing that healing will only begin when the trauma related feelings embedded in the body are appreciated." ~ Stephen W. Porges, Ph.D., author of *The Polyvagal Theory* "An interesting compendium of potential interventions that can be interwoven into any therapist's existing conceptual framework" ~ Louis Cozolino, Ph.D., Pepperdine University, and author of 5 books including the best-seller *The Neuroscience of Psychotherapy, Healing the Social Brain* (2nd edition)

Near Field Communication is a radio frequency technology that allows objects, such as mobile phones, computers, tags, or posters, to exchange information wirelessly across a small distance. This report on the progress of Near Field Communication reviews the features and functionality of the technology and summarizes the broad spectrum of its current and anticipated applications. We explore the development of NFC technology in recent years, introduce the major stakeholders in the NFC ecosystem, and project its movement toward mainstream adoption. Several examples of early implementation of NFC in libraries are highlighted, primarily involving the use of NFC to enhance discovery by linking books or other physical objects with digital information about

library resources, but also including applications of NFC to collection management and self-checkout. Future uses of NFC in libraries, such as smart posters or other enhanced outreach, are envisioned as well as the potential for the "touch paradigm" and "Internet of things" to transform the ways in which library users interact with the information environment.

Conscious of the privacy and security of our patrons, we also address continuing concerns related to NFC technology and its expected applications, recommending caution, awareness, and education as immediate next steps for librarians.
