PicoScope Guided Tests - Camshaft vs Crankshaft AT151

The engine is manufactured by GM and uses a cast iron block and cylinder head with hydraulic lifters and 5 main bearings. The 151 certainly is not a screamer, the AMC I4 has much better HP and torque ratings. The neat part about the engine is it has the same bell housing bolt pattern as a Chevy small block.

The 151 is often called the "Iron Duke", but is actually a Pontiac engine designed to replace the Chevy "Iron Duke" I4 engine. The engine does have the Chevy bell housing bolt pattern though. The engine is manufactured by GM and uses a cast iron block and cylinder head with hydraulic lifters and 5 main bearings.

In Japan, the 12R-U engine was designed to run on LPG for taxi usage, starting in October 1975. To meet new emissions regulations the 1.6-litre 12R engine was replaced by the more modern 2T-J in commercial models. The 18R-E engine with fuel injection that was used in the 2000SL and 2000SR discontinued production due to emission issues.

At151 Engine

The 4A was produced from 1980 through 1998. All 4A engines have a displacement of 1.6 L (1,587 cc). The cylinder bore was enlarged from the previous 3A engines at 81 mm, but the stroke remained the same as the 3A at 77 mm, giving it an over-square bore/stroke ratio which favours high engine speeds.

AQ151C - Petrol Engine - Keypart

The A Series engines are a family of inline-four internal combustion engines with displacement from 1.3 L to 1.8 L produced by Toyota Motor Corporation. The series has cast iron engine blocks and aluminum cylinder heads. To make the engine as short as possible, the cylinders are siamesed. The 1A engine was only 550 mm (21.6 in) long. The development of the series began in the late 1970s, when ...
