PARIS wears her greenest livery and puts on her most gracious airs in early summer. When the National Fete commemorative of the Bastille's fall has gone, there are few Parisians of wealth or leisure who remain in their city. Trouville, Deauville, Etretat and other pleasure cities claim them and even the bourgeoisie hie them to their summer villas. The city is given up to those tourists from America and England whom Paris still persists in calling Les Cooks in memory of that enterprising blazer of cheap trails for the masses. Your true Parisian and the stranger who has stayed within the city's gates to know her well, find themselves wholly out of sympathy with the eager crowds who follow beaten tracks and absorb topographical knowledge from guide-books.

The British Industrial Revolution has long been seen as the spark for modern, global industrialization and sustained economic growth. Indeed the origins of economic history, as a discipline, lie in 19th-century European and North American attempts to understand the foundation of this process. In this book, William J. Ashworth questions some of the orthodoxies concerning the history of the industrial revolution and offers a deep and detailed reassessment of the subject that focuses on the State and its role in the development of key British manufactures. In particular, he explores the role of State regulation and protectionism in nurturing Britain's negligible early manufacturing base. Taking a long view, from the mid 17th century through to the 19th century, the analysis weaves together a vast range of factors to provide one of the fullest analyses of the industrial revolution, and one that places it firmly within a global context, showing that the Industrial Revolution was merely a short moment within a much larger and longer global trajectory. This book is an important intervention in the debates surrounding modern industrial history will be essential reading for anyone interested in global and comparative economic history and the history of globalization.
