Sports-Related

Concussions in Youth National Academies Press This book presents essential teaching skills and tools for nurse educators. It begins with a discussion of the trends in nursing education and the principles of teaching and learning. The book

---

then explores topics such as classroom teaching, clinical experiences, teaching in the simulation laboratory, and online learning. Each chapter discusses the basics of teaching and learning in the specific environment, followed by scenarios that focus on the issues encountered by nursing faculty in these settings. The scenarios present the key issues under consideration, recommend actions that faculty members can institute to address

the issues, and describe rationales and solutions based on best evidence. The book also includes specific tools designed to assist nurse educators in preparation for the teaching role, such as examples of course syllabi, program outcomes, clinical contracts, and action plans. *Nurse Educator's Guide to Best Teaching Practice* is a valuable resource for novice and experienced educators in managing the challenges inherent in nursing education.

This open access book describes the serious threat of invasive species to native ecosystems. Invasive species have caused and will continue to cause enormous ecological and economic damage with ever increasing world trade. This multi-disciplinary book, written by over 100 national experts, presents the latest research on a wide range of natural science and social science fields that explore the

---

ecology, impacts, and practical tools for management of invasive species. It covers species of all taxonomic groups from insects and pathogens, to plants, vertebrates, and aquatic organisms that impact a diversity of habitats in forests, rangelands and grasslands of the United States. It is well-illustrated, provides summaries of the most important invasive species and issues impacting all regions of the country, and includes a comprehensive primary reference list for each topic. This scientific

synthesis provides the cultural, economic, scientific and social context for addressing environmental challenges posed by invasive species and will be a valuable resource for scholars, policy makers, natural resource managers and practitioners. Fertility and Assisted Reproductive Technology (ART) Elsevier Health Sciences Delivers current knowledge from global experts at the forefront of fertility and ART healthcare The first publication of its

kind, this book on fertility and assisted reproductive technology (ART) is a globally focused, authoritative guide to state-of-the-art information about modern fertility and ART healthcare. Written for clinicians, public health officials, women ' s health experts, scientists, students, scholars, and other interested individuals, the book encompasses theoretical, research, policy, and clinical practice aspects of fertility and ART healthcare. The book features the diverse

---

contributions of multidisciplinary researchers, scholars, and clinicians from eight countries who explore contemporary health care perspectives regarding individuals and families dealing with infertility and fertility challenges including such advanced technologies as in-vitro fertilization, intrauterine insemination, and oocyte preservation. The book addresses theoretical underpinnings of fertility and ART healthcare

including new ways of conceptualizing research and theoretical concepts. Practical aspects involved with administering and treating the many women and men whose lives are affected by fertility challenges are illuminated. Complex policy concerns resulting from the rapid advances in fertility and ART are considered. The health care needs of those seeking fertility evaluation and treatment including access to care locally and globally are examined in depth. The book also

includes discussions about novel approaches and emerging populations in fertility and ART healthcare that expand the scope of care. Thought-provoking case examples from contemporary care practices will help the reader to synthesize information. Key Features: Delivers thought provoking ART research and practice issues for health care clinicians, scholars, and scientists Synthesizes evolving theory, research, clinical practice, and public policy concerns

---

Addresses complex considerations within the practice and delivery of fertility and ART services Written by international thought leaders and emerging scholars on the forefront of ART technologies and other issues Includes case study exemplars to stimulate critical thinking and transform discussion about modern fertility and ART care

Review for the  
Canadian RN

Exam, Revised First Edition provides a thorough review of nursing principles and practices to help you prepare for the Canadian Registered Nurse Examination™ (CRNE). In addition to offering an overview of essential material in each major clinical area, with references to established sources, the book features hundreds of end-of-chapter questions, followed by answers and rationales. Two practice exams with over 250

practice questions are also accompanied by answers and rationales. This is an indispensable resource for all nursing students preparing for the Canadian Registered Nurse Examination™! Introductory chapters describing the CRNE and tips for answering questions provide valuable guidelines for mastering multiple choice questions, helping to reduce test anxiety and improve performance

---

Each chapter includes practice questions that are representative of those found on the CRNE, and reflect the framework of nursing practice in Canada. The text features a diversity of practice settings and client situations, mirroring the diversity of nursing contexts in Canada. Questions have been authored by nursing experts with over 30 years of combined experience teaching nursing and

preparing students to pass the CRNE. Appendices contain a full list of the CRNE Exam competencies, medical terminology, abbreviations, common laboratory and diagnostic tests, and mathematical formulae. Reflects the current CRNE blueprint; updated to conform to the CRNE 2010–2015 competencies and format. treating endometriosis. For residents, specialists, primary care doctors, and other healthcare providers, Comprehensive Gynecology is an easy-to-access source of trusted information for everyday practice. Includes helpful features such as key references and terms, key points at the end of each chapter, summary boxes for quick reference, and new bolded text to highlight the most important concepts. Features newly improved artwork; a more cohesive, easy-to-navigate design throughout; and more clinical algorithms. Contains hundreds of illustrations and tables, anatomical figures, radiographs, and photographs, as well as 20 videos that

address topics such as Pap smear techniques, hysteroscopic metroplasty, and endometriosis of the bladder. Brings you up to date with the latest applications in diagnostic and interventional ultrasound, issues in infertility, the latest research in menopause, and other essential aspects of today's practice. **Comprehensive Clinical Nephrology E-Book** Elsevier Health Sciences "The editors and contributors are to be congratulated for their clear effort to bring some degree of correction to the singular emphasis on pharmacotherapy. While it is clear that pharmacotherapy has a role to play in treatment, it is equally clear that the

use of relationships as therapy has an equal if not more important role to play. There are several other features of this text that commend it to the student and the nurse seeking a review or a refresher course. First, the authors have done an excellent job in noting historical context. Second, [they] have made extensive use of the current research literature." - Grayce M. Sills, PhD, RN, FAAN Thoroughly updated to correlate with DSM 5 diagnostic descriptions and QSEN guidelines, the second edition of this highly acclaimed undergraduate psychiatric nursing text features concrete strategies for establishing interpersonal

---

relationships as the basis not only for working with the psychiatric patient population, but as a timeless foundation for all nursing practice. The text guides students through the essential phases of self-discovery necessary to integrate interpersonal nursing theory into practice. Modules designed to foster growth in therapeutic use of self, including the importance of boundary management, are integrated with psychodynamic and current neurobiological theories to provide sturdy theoretical underpinnings for practice. A wealth of descriptive psychiatric diagnoses, QSEN criteria, and NANDA-based care plans, case

scenarios, evidence-based practice, patient and family education tips, drug summary lists, and complementary and alternative therapy approaches populate the text. The main body of the book focuses on common mental illnesses and weaves both the psychodynamic and neurobiological concepts into evidence-based strategies for nursing interventions. Additional features such as examples of therapeutic dialogue and a "Consumer's Perspective" featuring an actual consumer's voice relating personal experience about living with a specific illness, provide further guidance in understanding and adopting a

relationship-based approach to nursing. Web links facilitate quick access to additional information and NCLEX-style review questions prepare students for passing the NCLEX exam. New to the Second Edition: Revisions correlate to DSM 5 descriptions, QSEN criteria and NANDA nursing diagnoses Provides new information on psychopharmacology, compassion fatigue and a recovery model, use of informed consent, and cognitive behavioral therapy Presents updates on complementary and alternative interventions Includes expanded content on cultural and lifespan considerations related to mental health care worldwide Key Features: Focuses on

Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts

documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements

---

in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives.

Unequal Treatment will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color. Qualitative Designs and Methods in Nursing Sigma Theta Tau Filled with a variety of engaging learning exercises, the Study Guide for Essentials of Nursing Research, Tenth Edition boosts students' understanding of textbook concepts and helps cultivate the critical thinking and appraisal skills essential to

successful research-based nursing practice. Systematic application exercises, study questions, matching exercises, and completion exercises make reviewing fun for students and reinforce the most relevant information from each chapter of the textbook. This guide also includes eight complete research reports and related activities that emphasize evidence-based practice and help students transition from passive reading to active assessment and application of research evidence. *Confronting Racial and Ethnic Disparities in Health Care (with CD)* Springer Nature

Now in its third edition, this trusted clinical guide enables both the busy practitioner and student to review or to learn about a range of pathologies, conditions, examinations, diagnostic procedures, and interventions that can be effectively used in the physical rehabilitation of older people. It presents a broad overview of age-related physiological changes as well as specific professional discipline perspectives. Organized into eleven distinct and interrelated units, the first unit begins with key anatomical and physiological considerations seen with aging which have significant impact on the older person. The second and third units go on to review important aging-related conditions and disorders of the musculoskeletal and neuromuscular/neurological systems respectively. Neoplasms commonly encountered in older people are the focus of the fourth unit; while aging-related conditions of the cardiovascular, pulmonary, integumentary and sensory systems are presented in units five through seven. Unit eight highlights a range of specific clinical problems and conditions commonly encountered with older patients. Critically, all of these units emphasize

---

important examination and diagnostic procedures needed for a thorough evaluation and stress interventions that can be of significant benefit to the older patient. The ninth unit presents select physical therapeutic interventions that are especially important in managing rehabilitative care. Key societal issues related to aging are discussed in the tenth unit. Finally, the concluding eleventh unit focuses on the successful rehabilitation team that includes both professional and non-professional caregiver members. A trusted guide to the conditions and problems faced when evaluating and treating geriatric patients

Extensive coverage over 84 chapters, each written by an expert in the field. Includes imaging, vision and the aging ear. Cross-referenced - providing the complexity and inter-relatedness of co-morbidities common to aging patients. Collaborative international perspective

SCORE: 4/5 stars." --John Adams , honorary research associate, Faculty of Nursing and Midwifery , Royal College of Surgeons in Ireland, Nursing Standard This is the first book to clearly and fully demonstrate the process of using theory to guide nursing research and professional practice. It describes a step-by-step format for evaluating nursing theory's applicability to research, a format that links theory (both middle-range and grand theory) to research on a wide range of clinical populations and care delivery systems.

The book describes how theory analysis models are used to examine various nursing phenomena as they relate to nursing research and professional practice, and provides key examples of how this is accomplished. The book takes the reader through the process of using a theory to guide research from inception of a research question to evaluation of future research. International experts in theory-related nursing research describe twelve theories that have previously been applied to research and practice and six

---

theories that can be applied to future research and practice. Using a consistent analytic framework, each chapter applies a specific theory (from either nursing, psychology, sociology, or management) to a particular clinical population or care delivery issue. These encompass clinical, administrative, and educational nursing settings. The consistent format facilitates ease of comparison across different theories. Generous use of figures and tables further demonstrates the complex relationships between and among

concepts embedded in the theories. Key Features: Demonstrates a systematic format for evaluating middle-range and grand nursing theory's applicability to research Links theory to clinical practice at patient population and care delivery levels Provides a useful template for students of nursing disciplinary knowledge development Presents the scholarship of international researchers of theory-related nursing Includes theories from nursing, psychology,

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and

controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity.

**Sports-Related Concussions in Youth: Improving the Science, Changing the Culture** reviews

the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in

---

Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and

recommendations in this report set a direction for research to reach this goal.

**Making Nursing Knowledge Development**

**Explicit** Lippincott Williams & Wilkins Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various

practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who

---

support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are

responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children. *Contemporary Nursing* Oxford University Press

In this third edition of *Intracranial Stereotactic Radiosurgery*, Drs. Sheehan and Lunsford provide an updated assessment of the practice of stereotactic radiosurgery. Topics include benign and malignant tumors, cerebrovascular abnormalities, and functional disorders. Several new topics are now included and focus on immunotherapy, hypofractionation, and repeat radiosurgery. Each chapter contains key figures and tables to illustrate the critical concepts of the work. Contributors to the book represent many of the most prestigious stereotactic radiosurgery centers across the world. This book is comprised of 36 chapters and

---

represents a comprehensive update to prior editions. It is intended to be a readable, credible, and accessible reference on stereotactic radiosurgery. Editors Jason Sheehan, MD, PhD, FACS, FAANS, is the Vice Chair and Harrison Distinguished Professor of Neurological Surgery at the University of Virginia (UVA). He also serves as the Neurosciences Service Line Director at UVA. Dr. Sheehan is the current chair of the American Association of Neurological Surgeons (AANS) and Congress of Neurological Surgeons (CNS) Section on Tumors. He serves as the Editor-In-Chief of the Journal of Neuro-

Oncology. L. Dade Lunsford, MD, serves as the Lars Leksell Professor and Distinguished Professor at the Department of Neurological Surgery at the University of Pittsburgh. He is also director of the Center for Image-Guided Neurosurgery at the University of Pittsburgh Medical Center and an internationally recognized authority on stereotactic surgery, radiosurgery, and minimally invasive surgery. He has authored or coauthored more than 1,000 scientific reports and 16 books. *Contemporary Nursing E-Book* ScholarlyEditions Prepare for the NCLEX with this fun, full-color
