#### ATI Vital Signs Pretest Flashcards | Quizlet

To auscultating a patient's apical pulse accurately, you position the bell of the diaphragm of your stethoscope over the point of maximal impulse, which is located: at the fifth intercostal space at the left midclavicular

line. You are assessing a patient's vital signs. The patient has a temperature of 102F (39C).

Obtaining vital signs may be delegated (right task) as long as the client is stable (right circumstance). In the scenario, the client is 1 day postpartum and there is no indication the client is unstable.

2.This would not be appropriate delegation. Demonstrating implies client education which is within the scope of practice for a RN.
