This volume's focus on the environmental accounting of supply chain processes is of particular relevance because these processes supply data about the environmental impact of relationships between business organisations, an area where the boundary separating internal and external accounting is ill-defined. Here, contributors advocate what they term 'accounting for cooperation' as a more environmentally positive complement to the paradigmatic practice of 'accounting for competition'.

This report aims to gather the lessons learnt on the effects of HIT to costs and benefits that might be of use to organisations looking to develop and implement HIT programmes. This is a difficult exercise considering the multiple factors affecting implementation of an HIT programme. Factors include organisational characteristics, the kinds of changes being put in place and how they are managed, and the type of HIT system. The report finds that barriers to HIT implementation are still substantial but that some progress has been made on reporting the organisational factors crucial for the adoption of HIT. However, there is a challenge to adapt the studies and publications from HIT leaders (early implementers and people using HIT to best effect) to offer lessons beyond their local circumstances. The report also finds limited data on the cost-effectiveness of HIT.

Engineering managers and professionals make a long and lasting impact in the industry by regularly developing technology-based projects, as related to new product development, new service innovation or efficiency-centered process improvement, or both—to create strategic differentiation and operational excellence for their employers. They need certain business fundamentals that enable them to make decisions, based on both technology and business perspectives, leading to new or improved product or service offerings, which are technically feasible, economically viable, marketplace acceptable, and customer enlightening. This book consists of three sets of business fundamentals. The chapter "Cost Accounting and Control" discusses service and product costing, activity-based costing to define overhead expenses, and risk analysis and cost estimation under uncertainty. The chapter "Financial Accounting and Analysis" delineates the key financial statements, financial analyses, balanced scorecard, ratio analysis, and capital asset valuation—including operations, opportunities, and acquisition and mergers. The chapter "Marketing Management" reviews marketing functions, marketing forecasting, marketing segmentation, customers, and other factors affecting marketing in making value-adding contributions. The new business vocabulary and useful analysis tools presented will enable engineering managers to become more effective when interacting with senior management, and to prepare themselves for assuming higher-level corporate responsibilities.

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

“ Makes a provocative case that you

should put customers second, close open offices, and ditch performance appraisals. ” —Adam Grant, best-selling author of *Originals* “ Under New Management is a lively, provocative must-read. ” —Whitney Johnson, author of *Disrupt Yourself*. Why accepted management practices don ’ t work—and how innovative companies are changing the rules Should your employees know each other ’ s salaries? Is your vacation policy harming productivity? Does your hiring process undermine your team? David Burkus argues that the traditional management playbook is full of outdated, counterproductive practices, and he reveals how the alternative management revolution has already started at companies like Netflix, Zappos, Google, and others. Burkus investigates behind their office doors to show how these companies are reevaluating and reinventing the most basic management principles, like hiring, firing, vacation policy, and even office floor plan, and enhancing their business ’ s success as a result. “ Is your company ready for a radical departure from twentieth-century management standards? David Burkus has collected the stories of dozens of companies that are standing the old rules on their heads. Even better, Burkus shows how you can do it, too. ” —Daniel H. Pink, best-selling author of *Drive* and *To Sell Is Human* ? “ If you are going to read one book on being a better manager in the next year, start here. David Burkus has assembled the most practical research and provocative ideas into an incredibly quick read. ” —Tom Rath, best-selling author of *StrengthsFinder 2.0*

For upper-level undergraduate courses in deterministic and stochastic signals and system engineering *An Integrative Approach to Signals, Systems and Inference* *Signals, Systems and Inference* is a comprehensive text that builds on introductory courses in time- and frequency-domain analysis of signals and systems, and in probability. Directed primarily to upper-level undergraduates and beginning graduate students in engineering and applied science branches, this new textbook pioneers a novel course of study. Instead of the usual leap from broad introductory subjects to highly specialized advanced

subjects, this engaging and inclusive text creates a study track for a transitional course. Properties and representations of deterministic signals and systems are reviewed and elaborated on, including group delay and the structure and behavior of state-space models. The text also introduces and interprets correlation functions and power spectral densities for describing and processing random signals. Application contexts include pulse amplitude modulation, observer-based feedback control, optimum linear filters for minimum mean-square-error estimation, and matched filtering for signal detection. Model-based approaches to inference are emphasized, in particular for state estimation, signal estimation, and signal detection. The text explores ideas, methods and tools common to numerous fields involving signals, systems and inference: signal processing, control, communication, time-series analysis, financial engineering, biomedicine, and many others. *Signals, Systems and Inference* is a long-awaited and flexible text that can be used for a rigorous course in a broad range of engineering and applied science curricula.

This book informs readers of the needs and rationale for the integration of medical and dental care and information with an international perspective as to how and where medical and dental care separated into specific domains. It provide high level guidance on issues involved with care and data integration and how to achieve an integrated model of health care supported by integrated HIT. A patient typically expects that a visit to a dentist can usually be resolved immediately. This expectation places a premium on instant, accurate, thorough, and current information. The state-of-the-art of fully integrated (dental-medical) electronic health record (EHR) is covered and this is contrasted with the current state of dental-medical software. While dentists in the US Veterans Health Administration (VHA), the US Indian Health Service (IHS), or the US military, for example, have access to fully integrated health records, most US clinicians still gather information from separate sources via fax or phone calls. The authors provide an in-depth discussion of the role of informatics and information science in the articulation of medical and dental practices and clinical data with the focus on applied clinical informatics to improve quality of care, practice efficiency, coordination and continuity of care, communication between physicians and dentists and

to provide a more comprehensive care for the patients. Lastly, the book examines advances in medical and dental research and how these may affect dentistry in the future. Most new advances in healthcare research are information-intensive.

Power plays a central role in business and management. But what is power exactly, and what are key elements of this concept? Defining power as relative ability, this book discusses structures of power, individual power, the exercise of power, strategy, and collective power. While discussing these key components, ideas of important thinkers about power, from Plato to Foucault, Weber to Lukes, Machiavelli to Kahneman, Sun to Kotter, and Barnard to Clegg, are discussed and interpretively categorized into a toolbox of conceptual elements – what Blumer referred to as sensitizing concepts. This toolbox of sensitizing concepts allows the selection of those elements of the concept of power that provide the most constructive and effective practical understanding in particular situations. The core message behind the discussion is that knowledge of key components of the concept of power is empowering. It is empowering to learn about aspects of structures of power, individual power, the exercise of power, strategy, and collective power. Understanding such conceptual components empowers students, researchers, practitioners, and other readers to use their understanding in interpreting, theorizing about, and dealing with the

complexities of power in their particular situations – without tying them to any preconceived general theories about power.

It has been more than 20 years since Bernie Bass presented an integrated overview of full range leadership development. This has been the standard for providing leadership training around the world in business, military, religious and educational contexts. Penn State University's master of leadership development program is directed by John J. Sosik and uses these transactional

– transformational leadership paradigms as their foundation for their courses. This book can be used as a main textbook for this course and supplement any IO course in the area of leadership development. Full range leadership development strives to grow transformational leadership in organizations at all levels, including followers, thereby generating numerous positive outcomes at all levels. Organizations that support and develop transformational leadership across organizational levels are more productive and profitable, attract and retain high quality associates, promote creativity and innovation, garner

trust and commitment from employees, and are strategically positioned to respond well to changes in the market. This book presents the different theories of leadership and concentrate on the process model of Full Range Leadership that explains the concepts and procedures by which leaders affect their followers (individual leadership), teams (leader to team), and organizations (leader to larger systems). This book can be used by practitioners or students, as the authors provide practical action steps for how to best develop and display behaviors in the Full Range Leadership Development model.

It is now well recognised that the texture of foods is an important factor when consumers select particular foods. Food hydrocolloids have been widely used for controlling in various food products their viscoelasticity, emulsification, gelation, dispersion, thickening and many other functions. An international journal, FOOD HYDROCOLLOIDS, launched in 1986 has published a number of stimulating papers, and established an active forum for promoting the interaction between academics and industrialists and for combining basic scientific research with industrial development. Although there have been various research groups in many food processing areas in Japan, such as fish paste (kamaboko, surimi), soybean curd (tofu), agar jelly dessert, kuzu starch jelly, kimizu (Japanese style mayonnaise), their activities have been conducted in isolation of one another. The interaction between the various research groups operating in the various sectors has been weak. Symposia on food hydrocolloids have been organised on several occasions in Japan since 1985. Professor Glyn O. Phillips, the Chief Executive Editor of FOOD HYDROCOLLOIDS, suggested to us that we should organise an international conference on food hydrocolloids. We discussed it on many occasions, and eventually decided to organise such a meeting, and extended the scope to include

recent development in proteinaceous hydrocolloids, and their nutritional aspects, in addition to polysaccharides and emulsions.
