The fish processing industry is still far from the levels of scientific and technological development that characterize other food processing operations. It has also been slow in finding uses for by-products and processing wastes, compared with the meat and poultry industries. The utilization of fisheries by-products or wastes constitutes an area in which the application of modern techniques could potentially improve profitability. At present, increased attention is being focused on the application of new biotechnological methods to operations related to the seafood industry, with the objective of increasing its general efficiency. Because fish processing operations are commonly carried out in the vicinity of the sea, most of the resulting fish wastes have been disposed of by returning them to it. Pollution control measures and a better understanding of the valuable composition of the products extracted from the sea are expected to encourage their recovery and the development of new products from them. In the past, fisheries wastes and species not used for food have been generally utilized through technological processes with a low level of sophistication, such as those for the production of animal feed and fertilizer. Limited economic success has accompanied the application of physical and chemical processes for the recovery of non-utilized fisheries biomass and for the production of quality products from them.

Dan Hardy has used every available resource in his 20-year career as a pool professional to add to his store of knowledge about making and keeping water safe. An untiring and dedicated 'Pool Doctor', he has become the 'go to' man for owners of some of the world's largest, most ornate, and expensive private swimming pools -- including that of award-winning actor Mr John Travolta and his wife, Kelly Preston. Dan started working on pools as a boy in his dad's firm. Not content with doing routine maintenance, he began learning all he could about chemicals, mechanics, and safety. In this book he may just be a lifesaver to pool owners who want to save money on maintenance but need to know how to handle poisons safely. Pool maintenance business owners will want to have this book on hand as an easy guide to repairing filtration and pumps and dealing with serious pool problems. And anyone who wishes to have such a career could have no better mentor than Dan Hardy.

Based on the most recent standards from ASHRAE, the sixth edition provides complete and up-to-date coverage of all aspects of heating, ventilation, and air conditioning. The latest load calculation procedures, indoor air quality procedures, and issues related to ozone depletion are covered. New to this edition is the inclusion of additional realistic, interactive and in-depth examples available on the book website (www.wiley.com/college/mcquiston) that enable

students to simulate various scenarios to apply concepts from the text. Also integrated throughout the text are numerous worked examples that clearly show students how to apply the concepts in realistic scenarios. The sixth edition has also been revised to be more accessible to students for easier comprehension. Suitable for one or two semester, Junior/Senior/Graduate course in HVAC taught in Mechanical Engineering, Architectural Engineering, and Mechanical Engineering Technology departments.
