A comprehensive survey on the use of bedside skills and perimetric devices to the test visual fields, and how to interpret the results. To develop the clinician's interpretative skills, the authors include a chapter on visual anatomy and an atlas of 100 real-life cases arranged in anatomic order from retina to striate cortex. By placing a brief clinical vignette with a visual field on one side of the page and a description of the field and its causal lesion on the opposite side, the reader will be able to learn interpretation in a simulated clinical setting. An additional quiz section of twenty randomly arranged visual fields provides readers with an opportunity to test their newly acquired skills.

The Rehab Guide Littleton, Colo. : Libraries Unlimited

This thesis contains new research in both experimental and theoretical particle physics, making important contributions in each. Two analyses of collision data from the ATLAS experiment at the LHC are presented, as well as two phenomenological studies of heavy coloured resonances that could be produced at the LHC. The first data analysis was the measurement of top quark-antiquark production with a veto on additional jet activity. As the first detector-corrected measurement of jet activity in top-antitop events it played an important role in constraining the theoretical modelling, and ultimately reduced these uncertainties for ATLAS's other top-quark measurements by a factor of two. The second data analysis was the measurement of Z+2jet production and the observation of the electroweak vector boson fusion (VBF) component. As the first observation of VBF at a hadron collider, this measurement demonstrated new techniques to reliably extract VBF processes and paved the way for future VBF Higgs measurements. The first phenomenological study developed a new technique for identifying the colour of heavy resonances produced in proton-proton collisions. As a by-product of this study an unexpected and previously unnoticed correlation was discovered between the probability of correctly identifying a high-energy top and the colour structure of the event it was produced in. The second phenomenological study explored this relationship in more detail, and could have important consequences for the identification of new particles that decay to top quarks.

The Directory: contains more than 2,000 Web site records, organized into 20 subject-themed chapters. It provides descriptions and URLs for each site and describes sites to help in choosing the proper resource. It also provides Web site descriptions that includes information about the sponsoring agency and notes the useful or unique aspects of the site as well as listing some of the major government publications hosted on the site. It evaluates the most important and frequently sought sites providing a roster of congressional members with members' Web sites and includes a one-page "Quick Guide" to the major federal agencies and the leading online library, data source, and finding aid sites. There are multiple indexes in the back of the book to help locate Web sites by agency, site name, subject, and government publication title. The Master Index combines the agency, site name, and subject indexes. A separate index lists Web sites with full or substantial Spanish-language versions.
