Written for non-specialist users of electric motors and drives, this book explains how electric drives work and compares the performance of the main systems, with many examples of applications. The author's approach - using a minimum of mathematics - has made this book equally popular as an outline for professionals and an introductory student text. * First edition (1990) has sold over 6000 copies. Drives and Controls on the first edition: 'This book is very readable, up-to-date and should be extremely useful to both users and o.e.m. designers. I unhesitatingly recommend it to any busy engineer who needs to make informed judgements about selecting the right drive system.' New features of the second edition: * New section on the cycloconverter drive. * More on switched reluctance motor drives. * More on vector-controlled induction motor drives. * More on power switching devices. * New 'question and answer' sections on common problems and misconceptions. * Updating throughout. Electric Motors and Drives is for non-specialist users of electric motors and drives. It fills the gap between specialist textbooks (which are pitched at a level which is too academic for the average user) and the more prosaic 'handbooks' which are filled with useful detail but provide little opportunity for the development of any real insight or understanding. The book explores most of the widely-used modern types of motor and drive, including conventional and brushless d.c., induction motors (mains and inverter-fed), stepping motors, synchronous motors (mains and converter-fed) and reluctance motors.

El Informe sobre las Migraciones en el Mundo 2011 presenta los datos disponibles a escala mundial sobre las percepciones y las actitudes del público con respecto a la migración. Analiza la forma en que se modelan esas percepciones y actitudes y el modo en que pueden ejercer influencia en la política y en los medios de comunicación, o ser objeto de influencia. También examina el papel que desempeñan los medios de comunicación en la presentación de las opiniones, la información sobre las tendencias y el marco del discurso sobre la migración. Se incluyen, asimismo, ejemplos de buenas prácticas en la comunicación de una imagen positiva y equilibrada de los migrantes por parte de los gobiernos, la sociedad civil y los medios de comunicación. Por último, el Informe plantea varias medidas para mejorar la comunicación sobre la migración con el propósito de promover una mejor comprensión y reconocimiento de los beneficios de la migración, formular políticas con una mayor base empírica y contar con la participación efectiva de los propios migrantes.

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.
