This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation – from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities

?This pocket manual is a quick-reference handbook for general thoracic surgery. It is organized into 9 chapters providing a concise, yet inclusive list of the most common pathologies seen in thoracic surgery: pre-operative evaluation, peri-operative care, lungs and airways (divided into 3 separate sections to cover the vast number of topics), pleural disorders, mediastinal disorders, chest wall disorders, thoracic trauma, and benign and malignant esophageal disorders. The content of each chapter was specifically structured to make the handbook a high-yield reference that includes numerous management algorithms, flow diagrams, tables and images. Unlike a comprehensive textbook, paragraphs are kept at a minimum and the written material is presented using lists and bullet points to facilitate learning and retention. More importantly, the content is evidence-based and highlights the various controversies in the field. The Pocket Manual of General Thoracic Surgery is an irreplaceable educational tool amongst trainees and practicing physicians.

Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. *Manual of Definitive Surgical Trauma Care, Second Edition*, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: ·the causation of injuries - aids rapid understanding of presented trauma; ·the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; ·the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons.

Strange and Schafermeyer's Pediatric Emergency Medicine, Fifth Edition Jems Publishing Company Developed for the International Association for Trauma Surgery and Intensive Care (IATSIC), the *Manual of Definitive Surgical Trauma Care 5e* is ideal for training all surgeons who encounter major surgical trauma on an infrequent basis. This new edition includes both an e-version, and also a microSD card containing over 20 operative videos. The increasing role of non-operative management (NOM) has been recognised, and the Military Module is substantially updated to reflect recent conflict experience. An expanded section highlights trauma management under austere conditions. Written by faculty who teach the DSTC Course, this definitive and well established book focuses on life-saving surgical techniques to use in challenging and unfamiliar incidents of trauma.
