Pediatric trauma continues to have a significant impact on the health and well-being of children in the United States. Trauma continues to be the leading cause of death in children 1 to 18 years of age and accounted for more than 14,000 deaths among all children 0 to 18 years of age. In 2008, there were more than 8.6 million nonfatal injuries among newborn to 18-year-olds, with an injury rate of greater than 1 in 10. There is little debate that a coordinated effort and pediatric-specific advances in pediatric trauma systems, prehospital care and hospital care, and injury prevention can have a positive impact on pediatric trauma outcomes in the United States. However, there are still gaps in access to centers that deliver pediatric-focused trauma care, especially in rural areas. Furthermore, there are differing views between different centers regarding the optimal approach to the initial evaluation and management of the pediatric trauma patient. This book is targeted to review critical aspects of the care of the pediatric trauma patient, highlighting the most common and critical injuries encountered in the acute care setting.

Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an up-to-date, comprehensive and clinically focused volume for practitioners and trainees in trauma anesthesia and critical care. It is organized by organ system. The editor is an attending physician at a major urban hospital center recognized worldwide for its outstanding emergency medical services including trauma care and is recruiting leading trauma anesthesiologists to contribute. Anesthesiologists, pain medicine physicians, critical care physicians and trainees are the target audience.
