**The Ventilator Book** John Wiley & Sons Prehospital Trauma Life Support (PHTLS) is a unique, continuing education program that directly addresses trauma issues in the prehospital environment. Following the publication cycle of ATLS (Advanced Trauma Life Support) by the Committee on Trauma of the American College of Surgeons, the PHTLS program is designed to enhance and increase knowledge and skill in delivering trauma care. This fifth edition of the PHTLS textbook is the required book for the PHTLS course, and is also ideal for use as the trauma component of a paramedic

course or as a general reference book on trauma assessment and management. It combines both basic and advanced trauma concepts and skills in one definitive resource. Content includes both basic and advanced training and has been updated to reflect the current ATLS guidelines - complete with extensive references and suggested readings. A consistent approach for every body region makes the book easy to follow and includes content on anatomy and physiology, pathophysiology, and assessment and management. Airway, Thoracic, and Spinal Skills are presented in an illustrated, step-by-step format as Specific Skills. Case Scenarios with end-of-chapter solutions and Review Questions are included for every chapter to promote critical thinking and assess knowledge. A separate chapter on the Military provides special trauma considerations and protocols. Completely updated to reflect the changes made in the textbook, the ancillary package includes an instructor's manual, powerpoint slide set, 35 mm slide set, and a MERLIN site. All completely updated to reflect the changes made in the textbook. A new companion CD-ROM with more than 20 video presentations of the airway and spinal skills used in PHTLS is

now included with every book. It also contains information to download onto a PDA. New chapters have been added on Injury Prevention, the Golden Principles of Prehospital Trauma Care, and Triage, Transport, and Trauma Systems. Revised and expanded chapters include Head Trauma, Shock, Patient Assessment and Management, Airway Management and Ventilation, and Trauma in the Elderly. References and suggested reading lists are now included in every chapter to provide evidence-based prehospital trauma care. An appendix has been added on the additional concerns and needs of prolonged transportation. A new drug table on commonly used drugs for pharmacologically assisted intubation provides general guidelines on the topic. New user-friendly algorithms: assessment; airway management; indications for spinal immobilization; shock management; management of traumatic brain injury; and management of musculoskeletal trauma. An entirely new set of photographs has been added to the skills portions of the text. Photos and video clips are now included for alternative techniques such as face to face intubation, two-person standing longboard application, and two-

person rapid extrication.  
Tactical Combat Casualty Care McGraw-Hill Professional Publishing  
Developed for the International Association for Trauma Surgery and Intensive Care (IATSIC), the Manual of Definitive Surgical Trauma Care 5e is ideal for training all surgeons who encounter major surgical trauma on an infrequent basis. This new edition includes both an e-version, and also a microSD card containing over 20 operative videos. The increasing role of non-operative management (NOM) has been recognised, and the Military Module is substantially updated to reflect recent conflict experience. An expanded section highlights trauma management under austere conditions. Written by faculty who teach the DSTC Course, this definitive and well established book focuses on life-saving surgical techniques to use in challenging and unfamiliar incidents of trauma.

The Classic Guide to ATL—Now Updated for ATL 8 and Visual Studio 2005. Four leading Windows programming experts systematically reveal ATL's inner workings, explaining not just how ATL works, but why it works the way it does. Client-side developers will master ATL's resources for windowing, COM control, MFC integration, web service proxy generation, and more. Server-side programmers will discover ATL's full COM server and object services, and its extensive support for high-throughput, high-concurrency web applications, and services. Every Windows developer will learn powerful ways to increase flexibility, reduce overhead, and maximize transparency and control.

- Discover ATL's internals through diagrams, example code, and internal ATL implementation code
- Walk through wizards that simplify ATL usage in common applications
- Master string

handling in C++, COM, and ATL

- Leverage ATL smart types, including CComPtr, CComQIPtr, CComBSTR, and CComVariant
- Understand and choose the right options for implementing IUnknown
- Create glue code that exposes COM objects from COM servers
- Use canned interface implementations to support object persistence, COM collections, enumerators, and connection points
- Build standalone applications and UI components with ATL window classes and controls
- Use ATL Server to develop web applications that run on Microsoft IIS

John Wiley & Sons

A decade of intense combat in two theaters has taught us many lessons about what works

and what does not in the effort to accomplish that all-important mission of saving lives in battle. A severely injured Soldier today has about twice the likelihood of surviving his wounds compared to Soldiers in wars as recent as Vietnam. That progress is the result of many things: better tactics and weapons, better body armor and helmets, better trained and fitter Soldiers. But, the introduction of tactical combat casualty care (TCCC) throughout the Army has certainly been an important part of that improvement. TCCC is fundamentally different from civilian care. It is the thoughtful integration of tactics and medicine, but to make it work takes a different set of skills and equipment, and every Soldier and leader needs to understand it and

---

practice it. This handbook is the result of years of careful study of the care of wounded Soldiers, painstaking research by medics and physicians, and the ability of leaders at all levels to see and understand the lessons being learned and the willingness to make the changes in equipment, training, and doctrine needed to improve the performance of the Army Health System. It is the best guidance we have at the time of publication, but new information, new techniques, or new equipment will drive changes in the future. Be assured that these performance improvement efforts will continue as long as American Soldiers go in harm's way.

The Golden Hour is a well-

established concept in emergency medicine, related to the critical period of one hour after an injury, accident or trauma. This term implies that the mortality rates increase substantially if efficient care is not provided within 60 minutes after the trauma. This book is intended as a practical manual in Trauma Care within the context of the golden hour, addressing all trauma types and all body parts. Readers will find essential decision-making algorithms and protocols with commentary for traumas, along with easily accessible information on how to treat patients in a very practical and handy fashion. Furthermore, the content is presented in a didactic way suitable for a wide audience, from medical students who want to learn about the basics of trauma care to experienced surgeons seeking a comprehensive guide to trauma-related interventions. The book combines contributions from

---

experts at two renowned Trauma Centers, the Hospital do Trabalhador at Curitiba, Brazil, and the Ryder Trauma Center in Miami, USA. Therefore, considering the different local environments and resources, the book provides distinct perspectives for several injuries, presenting the state of the art in Trauma Care. The diversity of perspectives in this book contributes to a global health care approach suitable for trauma-related events from developed countries to remote areas. The Trauma Golden Hour - A Practical Guide celebrates the Centennial Anniversary of the Federal University of Parana (Brazil), the 25th Anniversary of the Ryder Trauma Center (USA) and the 20th Anniversary of the Hospital do Trabalhador (Brazil). *Tactical Medicine Essentials* tfm Publishing Limited Text only. To purchase the text with a Resource Central Access Code Card, please use ISBN: 0-13-281811-6 For more than 30 years, International Trauma Life Support has been at the forefront of trauma education at all levels of emergency care worldwide. This practical, hands-on training offers a complete reference covering all skills necessary for rapid assessment, resuscitation, stabilization, and transportation of the trauma patient. Updated with new photos and the latest approaches to the care of the trauma patient, this seventh edition conforms to the most recent AHA/ILCOR guidelines for artificial ventilation and CPR. Black Surgeons and Surgery in America John Wiley & Sons This book will help you take a

badly wounded patient to the operating room, organize yourself and your team, do battle with some vicious injuries and come out with the best possible result. It is a practical guide to operative trauma surgery for residents and registrars, for general surgeons with an interest in trauma, and for isolated surgeons operating on wounded patients in military, rural or humanitarian settings. A surgical atlas may show you what to do with your hands but not how to think, plan and improvise. Here you will find practical advice on how to use your head as well as your hands when operating on a massively bleeding trauma patient. The first part of this book presents some general principles of trauma surgery. The second part is about trauma surgery as a contact sport. Here we show you how to deal with specific injuries to the abdomen, chest, neck and peripheral vessels. The single most important lesson we hope you will derive from this book is to always keep it simple because, in trauma surgery, the simple stuff works.

The Save a Life Initiative has just released its newest course: Advanced Cardiac Life Support (ACLS). This manual is based on the 2015-2020 Advanced Cardiac Life Support guidelines published by the American Heart Association. The Advanced Cardiac Life Support (ACLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in an Advanced Cardiac Life Support Certification or

Recertification Course. It serves as the primary training material for ACLS Certification and Recertification courses. Although it is primarily intended for use during their courses, the handbook was also created to serve as daily reference material for health care professionals. Information covered in the handbook includes ACLS instruction for adults and children through multiple case scenarios. Case scenarios include, but are not limited to, respiratory arrest, ventricular fibrillation and bradycardia. Specific ACLS Algorithms and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.
