communication, endeavor to shift the focus in lifelong learning from group exercises in a lecture hall to self-directed, practice-related activities. Although most experts have applauded this new concept, few publications have addressed methods for implementation. The Manning-DeBakey book describes such methods as devised by outstanding clinicians and academicians to obtain educational benefit from their clinical experience. Some techniques inspired by quality assurance, for example, these master clinicians have used successfully to improve their knowledge, skills, and patient care. This book not only identifies the primary concerns in continuing medical education, but also offers sound recommendations and effective solutions and suggests future directions and approaches. The authors have analyzed the continuing educational practices of physicians in a wide range of environments, from small communities to the most acclaimed medical centers, and have extracted additional advice from the writings of past authorities like Osler. The resulting concepts will undoubtedly attract wide public attention. Office practice audit, self-directed learning, case indexing, patient education, computer-assisted education, and collegial networks, as well as regular reading, writing, and teaching, are among the successful methods described by physicians and surgeons who exemplify the highest standards of medical practice.

This book functions as a practical guide for the use of simulation in anesthesiology. Divided into five parts, it begins with the history of simulation in anesthesiology,

its relevant pedagogical principles, and the modes of its employment. Readers are then provided with a comprehensive review of simulation technologies as employed in anesthesiology and are guided on the use of simulation for a variety of learners: undergraduate and graduate medical trainees, practicing anesthesiologists, and allied health providers. Subsequent chapters provide a ‘how-to’ guide for the employment of simulation across wide range of anesthesiology subspecialties before concluding with a proposed roadmap for the future of translational simulation in healthcare. The Comprehensive Textbook of Healthcare Simulation: Anesthesiology is written and edited by leaders in the field and includes hundreds of high-quality color surgical illustrations and photographs.

The most widely used and highly regarded textbook and reference of emergency medicine -- Endorsed by the American College of Emergency Physicians The 8th edition of Tintinalli's Emergency Medicine provides the depth and breadth of coverage that reflects the complexity and expertise needed to practice emergency medicine successfully in today's fast-paced environments. It is an important contemporary clinical emergency care resource for physicians, NPs,

and PAs who practice emergency medicine and for emergency medicine and pediatric emergency medicine fellows. It remains the preferred study guide for in-training and board examinations and recertification. NEW to this edition: • Full-color design with more tables than ever to succinctly present key information • Extensive updates to all sections, incorporating the latest guidelines, evidence-based protocols, and relevant research • Expanded pediatric section, with complete clinical information for general and pediatric emergency physicians • Expanded coverage of common emergency department procedures, with improved illustrations • Online access to more than 30 videos, covering a wide range of procedural and diagnostic topics and focusing on the latest ultrasound-guided

techniques From the reviews of the seventh edition:
"Collectively, they have once again produced an excellent text that manages to cover the broad scope of emergency medicine while remaining an easily readable and practical resource....Last, for the inevitable comparison of this current edition of Tintinalli's *Emergency Medicine* with other available emergency medicine textbooks available: in my opinion, Tintinalli's still comes out on top. It is more concise and easier to read than some, yet it covers the breadth of emergency medicine practice more comprehensively than others....Just as previous editions did, the seventh presents all of the most pertinent and up-to-date information in a well-organized format that is comprehensive yet easy to read. That and many of the attractive new features in this current edition will ensure its

Caregivers and teachers need to know what to do when a child is injured or becomes suddenly ill. Most injuries that require first aid care are not life-threatening. However, first aid can sometimes mean the difference between life and death. This course is designed to give caregivers and teachers the education they need to effectively care for children.
MCQs and EMQs in Surgery: A Bailey & Love Companion Guide World Health Organization
"... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities

are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and

ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD."--Publisher's website.

Manual of Orthopaedics

McGraw Hill Professional

This book, written by members of the core faculty responsible for European courses on Medical Response to Major Incidents (MRMI), is a practical guide for all medical staff on how to respond to a wide range of disaster scenarios. The entire spectrum of knowledge is covered, from command and coordination through to the management of individual casualties. Central importance is attached to the key component of decision making by explaining what needs to be done for patients in particular situations and the required order and timing of treatment measures. Simplified methods receive due attention, as it is often necessary for medical staff to administer primary treatment outside of their own specialty. This book will prove an invaluable aid to all who may be involved in the

response to major accidents and disasters, including medical and nursing students, ambulance crew, and military personnel as well as medical specialists.

Injury is an increasingly significant health problem throughout the world, accounting for 16 per cent of the global burden of disease. The public health burden of death and disability from injury is particularly notable in low and middle income countries. These guidelines seek to establish practical and affordable standards applicable to injury or trauma care worldwide, whether in rural health posts, small hospitals, hospitals staffed by specialists or tertiary care centres. It sets out a list of key trauma treatment services

designed to be achievable in all settings, and defines the various human and physical resources required. It also includes a number of recommendations for methods to promote such standards including training, performance improvement, trauma team organisation and hospital inspection.
