ACLS Review Made Incredibly Easy John Wiley & Sons

This book, written by members of the core faculty responsible for European courses on Medical Response to Major Incidents (MRMI), is a practical guide for all medical staff on how to respond to a wide range of disaster scenarios. The entire spectrum of knowledge is covered, from command and coordination through to the management of individual casualties. Central importance is attached to the key component of decision making by explaining what needs to be done for patients in particular situations and the required order and timing of treatment measures. Simplified methods receive due attention, as it is often necessary for medical staff to administer primary treatment outside of their own specialty. This book will prove an invaluable aid to all who may be involved in the response to major accidents and disasters, including medical and nursing students, ambulance crew, and military personnel as well as medical specialists.

Basic Emergency Care: Approach to the Acutely Ill and Injured Black Surgeons and Surgery in AmericaApple Device ManagementA Unified Theory of Managing Macs, iPads, iPhones, and AppleTVs

In Medicine: Preserving the Passion, Phil R. Manning, a pioneer and recognized authority in continuing medical education, and Lois DeBakey, a passionate advocate of critical reasoning and leading scholar in scientific communication, endeavor to shift the focus in lifelong learning from group exercises in a lecture hall to self-directed, practice-related activities. Al though most experts have applauded this new concept, few publications have addressed methods for implementation. The Manning-DeBakey book describes such methods as devised by outstanding clinicians and acade

micians to obtain educational benefit from their clinical experience. Some techniques inspired by quality assurance, for example, these master cli nicians have used successfully to improve their knowledge, skills, and patient care. This book not only identifies the primary concerns in con tinuing medical education, but also offers sound recommendations and effective solutions and suggests future directions and approaches. The authors have analyzed the continuing educational practices of phy sicians in a wide range of environments, from small communities to the most acclaimed medical centers, and have extracted additional advice from the writings of past authorities like Osler. The resulting concepts will un doubtedly attract wide public attention. Office practice audit, self-directed learning, case indexing, patient education, computer-assisted education, and collegial networks, as well as regular reading, writing, and teaching, are among the successful methods described by physicians and surgeons who exemplify the highest standards of medical practice.

Military Medicine Springer

This book functions as a practical guide for the use of simulation in anesthesiology. Divided into five parts, it begins with the history of simulation in anesthesiology, its relevant pedagogical principles, and the modes of its employment. Readers are then provided with a comprehensive review of simulation technologies as employed in anesthesiology and are guided on the use of simulation for a variety of learners: undergraduate and graduate medical trainees, practicing anesthesiologists, and allied health providers. Subsequent chapters provide a ‘how-to’ guide for the employment of simulation across wide range of anesthesiology subspecialties before concluding with a proposed roadmap for the future of translational simulation in healthcare. The Comprehensive Textbook of Healthcare Simulation: Anesthesiology is written and edited by leaders in the field and includes hundreds of high-quality color surgical illustrations and photographs.

Guidelines for the clinical practice of
medicine have been proposed as the solution
to the whole range of current health care
problems. This new book presents the first
balanced and highly practical view of
guidelines--their strengths, their
limitations, and how they can be used most
effectively to benefit health care. The
volume offers Recommendations and a
proposed framework for strengthening
development and use of guidelines. Numerous
examples of guidelines. A ready-to-use
instrument for assessing the soundness of
guidelines. Six case studies exploring
issues involved when practitioners use
guidelines on a daily basis. With a real-
world outlook, the volume reviews efforts
by agencies and organizations to
disseminate guidelines and examines how
well guidelines are functioning--exploring
issues such as patient information,
liability, costs, computerization, and the
adaptation of national guidelines to local
needs.

Tactical Combat Casualty Care (TCCC) has saved
hundreds of lives during our nation's conflicts in
Iraq and Afghanistan. Nearly 90 percent of combat
fatalities occur before a casualty reaches a
medical treatment facility. Therefore, the
prehospital phase of care is needed to focus on
reducing the number of combat deaths. However, few
military physicians have had training in this area
and, at the onset of hostilities, most combat
medics, corpsmen, and pararescue personnel in the
U.S. military have been trained to perform
battlefield trauma care through civilian-based
trauma courses. These courses are not designed for
the prehospital combat environment and do not
reflect current practices in the area of
prehospital care. TCCC was created to train
Soldiers and medical personnel on current best
practices for medical treatment from the point of
injury to evacuation to Role 3 facilities

Emergency medicine attendings who wish to
hone their teachingskills can find a number
of books on educational strategies
writtenby physicians from other
disciplines. However, until thepublication
of the first edition of this book, they did
not haveaccess to a text written by
emergency medicine physicians onmethods of
teaching that are directly applicable to
teaching EM.This book was compiled to meet
that need. Following the introductory
section, which provides importantbackground
information, the book's contents are
organizedinto 4 sections that correspond to
the core needs and interests ofEM
educators: Section 2 focuses on practical
and ethicalconsiderations of teaching in
the ED; Section 3 provides strategiesfor
teaching specific groups of learners;

Section 4 looks at theskills that are
characteristic of the best EM educators;
andSection 5 looks indepthly at specific
teaching techniques andstrategies. Now more
than ever this book addresses the needs of
physicianeducators from all over the world.
New chapters discuss lecturingto an
international audience; using simulation as
a teaching tool;how to make journal club
work for you, and other topics that are
ofbroad interest to medical educators in
this field. Ingeneral, each chapter has
been updated and reviewed to make surethe
content was something that emergency
physician educators coulduse in any country
. The chapter contributors are widely
regarded as leaders in thefield of
emergency medicine education and faculty
development.Authors were given free rein to
develop their chapters and write intheir
own style. They were asked to present their
personal views onhow to successfully teach
the art of emergency medicine, ratherthan
review evidence-based guidelines regarding
medical education.As a result, most of the
chapters have few references. Thisfirst-

Oxford Handbook for the Foundation Programme Cambridge University Press

Injury is an increasingly significant health problem throughout the world, accounting for 16 per cent of the global burden of disease. The public health burden of death and disability from injury is particularly notable in low and middle income countries. These guidelines seek to establish practical and affordable standards applicable to injury or trauma care worldwide, whether in rural health posts, small hospitals, hospitals staffed by specialists or tertiary care centres. It sets out a list of key trauma treatment services designed to be achievable in all settings, and defines the various human and physical resources required. It also includes a number of recommendations for methods to promote such standards including training, performance improvement, trauma team organisation and hospital inspection.
