2020 Handbook of Emergency Cardiovascular Care for Healthcare Providers World Bank Publications

The World Bank finances about US\$720 million in training every year, through both its lending projects and its in-house World Bank Institute (WBI). The evaluation found that while most of the training reviewed resulted in demonstrable participant learning, this learning frequently did not lead to real change in participants' workplace performance. Poor training outcomes most often resulted from training content that wasn't relevant to the needs and goals of the target institutions, or from the trainees' lack of incentives or resources to apply learning in their workplaces. These findings highlight how important it is for training to be embedded in broader capacity-building programs that identify and address organizational and institutional capacity constraints alongside human ones.

Oxford American Handbook of Clinical Examination and Practical Skills Springer Nature Is real property appraisal evolving, or have all of the "big ideas" already been conceived? This

question has been circulating among the leaders of the Appraisal Institute during the past several

annual meetings, usually encountering little in the way of satisfying answers. This is not too surprising, because grand ideas and new knowledge do not typically evolve from off-hand conversation. They are

the product of focused intellectual activity and hours of difficult work. This unquenched thirst for new knowledge is the primary reason for assembling this collection of new manuscripts dealing with

valuation theory, which was financially underwritten by the Appraisal Institute. Their generosity and willingness to partner with the American Real Estate Society made this collection of thoughtful and

thought provoking essays possible. They are the result of a global response to a worldwide call for papers, and demonstrate that real estate valuation is indeed an international discipline. The United

States, Australia and New Zealand, Southeast Asia, the Pacific Rim, and Europe are all represented by this impressive collection of authors. Together, the eighteen essays that make up this volume

demonstrate that there are a sufficient number of "big ideas" to challenge and improve the appraisal profession for years to come. Real Estate Valuation Theory is organized around five categories of

intellectual contribution to the whole-appraiser decision making and valuation accuracy, application of nontraditional appraisal techniques such as regression and the minimum-variance grid method,

appraising contaminated property, ad valorem tax assessment, and new perspectives on traditional appraisal methods. One common thread is that all of the papers are exceptionally well written and

thought provoking. Urgent Care Medicine Secrets E-Book Springer Science & Business Media

By highlighting relations between experimental and theoretical work, this volume explores new ways of addressing one of the central challenges in the study of language and cognition. The articles bring

together work by leading scholars and younger researchers in psychology, linguistics and philosophy. An introductory chapter lays out the background on concept composition, a problem that is

stimulating much new research in cognitive science. Researchers in this interdisciplinary domain aim to explain how meanings of complex expressions are derived from simple lexical concepts and to

show how these meanings connect to concept representations. Traditionally, much of the work on concept composition has been carried out within separate disciplines, where cognitive psychologists

have concentrated on concept representations, and linguists and philosophers have focused on the meaning and use of logical operators. This volume demonstrates an important change in this

situation, where convergence points between these three disciplines in cognitive science are emerging and are leading to new findings and theoretical insights. This book is open access under a CC BY
