This extraordinary book explains the engine that has catapulted the Internet from backwater to ubiquity—and reveals that it is sputtering precisely because of its runaway success. With the unwitting help of its users, the generative Internet is on a path to a lockdown, ending its cycle of innovation—and facilitating unsettling new kinds of control. iPods, iPhones, Xboxes, and TiVos represent the first wave of Internet-centered products that can't be easily modified by anyone except their vendors or selected partners. These "tethered appliances" have already been used in remarkable but little-known ways: car GPS systems have been reconfigured at the demand of law enforcement to eavesdrop on the occupants at all times, and digital video recorders have been ordered to self-destruct thanks to a lawsuit against the manufacturer thousands of miles away. New Web 2.0 platforms like Google mash-ups and Facebook are rightly touted—but their applications can be similarly monitored and eliminated from a central source. As tethered appliances and applications eclipse the PC, the very nature of the Internet—its "generativity," or innovative character—is at risk. The Internet's current trajectory is one of lost opportunity. Its salvation, Zittrain argues, lies in the hands of its millions of users. Drawing on generative technologies like Wikipedia that have so far survived their own successes, this book shows how to develop new technologies and social structures that allow users to work creatively and collaboratively, participate in solutions, and become true "netizens."

The world's most infamous hacker offers an insider's view of the low-tech threats to high-tech security Kevin Mitnick's exploits as a cyber-desperado and fugitive form one of the most exhaustive FBI manhunts in history and have spawned dozens of articles, books, films, and documentaries. Since his release from federal prison, in 1998, Mitnick has turned his life around and established himself as one of the most sought-after computer security experts worldwide. Now, in *The Art of Deception*, the world's most notorious hacker gives new meaning to the old adage, "It takes a thief to catch a thief." Focusing on the human factors involved with information security, Mitnick explains why all the firewalls and encryption protocols in the world will never be enough to stop a savvy grifter intent on rifling a corporate database or an irate employee determined to crash a system. With the help of many fascinating true stories of successful attacks on business and government, he illustrates just how susceptible even the most locked-down information systems are to a slick con artist impersonating an IRS agent. Narrating from the points of view of both the attacker and the victims, he explains why each attack was so successful and how it could have been prevented in an engaging and highly readable style reminiscent of a true-crime novel. And, perhaps most importantly, Mitnick offers advice for preventing these types of social engineering hacks through security protocols, training programs, and manuals that address the human element of security.

This book convincingly argues that from a theoretical point of view present day network industries offer opportunities for strategic behaviour and that these opportunities are also actually utilized in practice. The authors show that this behaviour can be harmful to the realization of the expected positive effects of institutional changes such as liberalization and privatization (e.g., innovation and lower prices). The authors make their case in a solid theoretical way illustrated with insightful case studies. This book is a must for academics, managers and policy makers in today's network industries. John Groenewegen, Delft University of Technology, The Netherlands This in-depth book explains how institutional changes such as the privatization and liberalization of network industries, for example transport, energy or telecommunications, can frequently be disappointing. The expected benefits such as lower prices, innovation and better services fail to materialize, often because the number of competitors is low. The authors demonstrate how strategic actor behaviour of one or more of the firms involved can help explain these disappointing results. This book elucidates the concept of strategic behaviour and portrays it in real-life examples to aid our understanding of this important phenomenon in terms of policy and organizational decision-making. It clearly demonstrates the adverse effects strategic behaviour can exert on the quality of infrastructure provision after liberalization. The theoretical sections are backed by empirical examples from throughout the world. The unique multidisciplinary approach will ensure a broad readership among students, researchers and policy-makers with an interest in the economics, politics and management of infrastructure and network industries.

This title devotes much needed attention to understanding how society benefits from infrastructure resources and how management decisions affect a wide variety of interests. The book links infrastructure, a particular set of resources defined in terms of the manner in which they create value, with commons, a resource management principle by which a resource is shared within a community.

Marvin Heemeyer was a blue-collar man whose greatest joy in life was to see his muffler-repair shop prosper. When he felt the government of Granby, Colorado, was conspiring against him and the success of his business, he decided to take action. He did not take his vengeance by walking into the town hall with a gun. Nor did he build bombs and deliver them to local politicians. No, Marvin was more ingenious than that. He put his welding skills to work. In so doing, Marvin Heemeyer made history as one of the most original, complex, controversial, and misunderstood criminals in history. *Malice* is the story of his life leading up to his one-of-a-kind crime. Exhaustively researched, author Liam Llewellyn portrays the story in its entirety, then poses an alternative interpretation. *Malice* challenges the reader to ask such questions as: Do governments conspire against individuals? In the wake of enormous tragedy, do governments tell the truth? What is a criminal? Do two wrongs make a right?
