Order and Disorder, the first epic poem by an Englishwoman, has never before been available in its entirety. The first five cantos were printed anonymously in 1679, but fifteen further cantos remained in manuscript, probably because they were so politically sensitive. David Norbrook, widely recognized as a leading authority on Renaissance literature and politics, has now attributed the work to the republican, Lucy Hutchinson. In this prestigious scholarly volume, he provides a wealth of editorial matter, along with the first full version of Order and Disorder ever to be published.

Electricity has shaped the modern world. But how has it affected our health and environment? Over the last 220 years, society has evolved a universal belief that electricity is 'safe' for humanity and the planet. Scientist and journalist Arthur Firstenberg disrupts this conviction by telling the story of electricity in a way it has never been told before--from an environmental point of view--by detailing the effects that this fundamental societal building block has had on our health and our planet. In The Invisible Rainbow, Firstenberg traces the history of electricity from the early eighteenth century to the present, making a compelling case that many environmental problems, as well as the major diseases of industrialized civilization--heart disease, diabetes, and cancer--are related to electrical pollution.

"Sharpening the Combat Edge" focuses on the use of analysis in combat operations and concentrates on the utilization of techniques in situations with which the authors are

---

personally familiar. It covers primarily the systematic blending of military judgment, data collection, and simple problem solving techniques as used in the 9th Infantry Division and II Field Force, Vietnam, 1968-1970. The approach is rather tentative because it was not possible in many cases to determine exactly what factors made the operations go so well. Rather the authors have laid out the most important and interesting factors in the hopes that the readers will be stimulated and perhaps decide for themselves what the critical points were.

The rapid growth of electronic commerce, along with changes in information, computing, and communications, is having a profound effect on the United States economy. President Clinton recently directed the National Economic Council, in consultation with executive branch agencies, to analyze the economic implications of the Internet and electronic commerce domestically and internationally, and to consider new types of data collection and research that could be

undertaken by public and private organizations. This book contains work presented at a conference held by executive branch agencies in May 1999 at the Department of Commerce. The goals of the conference were to assess current research on the digital economy, to engage the private sector in developing the research that informs investment and policy decisions, and to promote better understanding of the growth and socioeconomic implications of information technology and electronic commerce. Aspects of the digital economy addressed include macroeconomic assessment, organizational change, small business, access, market structure and competition, and employment and the workforce.

What does it mean for a woman to write an elegy, ode, epic, or blazon in the seventeenth century? How does their reading affect women's use of particular poetic forms and what can the physical appearance of a poem, in print and manuscript, reveal about how that poem in turn was read? *Forms of Engagement* shows how the aesthetic qualities of early modern women's poetry emerge from the culture in which they write. It reveals previously

unrecognized patterns of influence between women poets Katherine Philips, Lucy Hutchinson, and Margaret Cavendish and their peers and predecessors: how Lucy Hutchinson responded to Ben Jonson and John Milton, how Margaret Cavendish responded to Thomas Hobbes and the scientists of the early Royal Society, and how Katherine Philips re-worked Donne's lyrics and may herself have influenced Abraham Cowley and Andrew Marvell. This book places analysis of form at the centre of an historical study of women writers, arguing that reading for form is reading for influence. Hutchinson, Philips, and Cavendish were immersed in mid-seventeenth century cultural developments, from the birth of experimental philosophy, to the local and state politics of civil war and the rapid expansion of women's print publication. For women poets, reworking poetic forms such as elegy, ode, epic, and couplet was a fundamental engagement with the culture in which they wrote. By focusing on these interactions, rather than statements of exclusion and rejection, a formalist reading of these women can actually provide a more nuanced historical view of their participation in literary culture.

In response to a request from the Defense Advanced Research Projects Agency, the committee studied a range of issues to help identify what strategies the Department of Defense might follow to meet its need for flexible, rapidly deployable communications systems. Taking into account the military's particular requirements for security, interoperability, and other capabilities as well as the extent to which commercial technology development can be expected to support these and related needs, the book recommends systems and component research as well as organizational changes to help the DOD field state-of-the-art, cost-effective untethered communications systems. In addition to advising DARPA on where its investment in information technology for mobile wireless communications systems can have the greatest impact, the book explores the evolution of wireless technology, the often fruitful synergy between commercial and military research and development efforts, and the technical challenges still to be overcome in making the dream of "anytime,
