A dizzying trip through the mind(s) of the provocative and influential thinker Nick Land. During the 1990s British philosopher Nick Land's unique work, variously described as "rabid nihilism," "mad black deleuzianism," and "cybergothic," developed perhaps the most rigorous and culturally-engaged escape route out of the malaise of "continental philosophy" —a route that was implacably blocked by the academy. However, Land's work has continued to exert an influence, both through the British "speculative realist" philosophers who studied with him, and through the many cultural producers—writers, artists, musicians, filmmakers—who have been invigorated by his uncompromising and abrasive philosophical vision. Beginning with Land's early radical rereadings of Heidegger, Nietzsche, Kant and Bataille, the volume collects together the papers, talks and articles of the mid-90s—long the subject of rumour and vague legend (including some work which has never previously appeared in print)—in which Land developed his futuristic theory-fiction of cybercapitalism gone amok; and ends with his enigmatic later writings in which Ballardian fictions, poetics, cryptography, anthropology, grammatology and the occult are smeared into unrecognisable hybrids. Fanged Noumena gives a dizzying perspective on the entire trajectory of this provocative and influential thinker's work, and has introduced his unique voice to a new generation of readers.

Classical natural product chemistry is transitioning to modern day metabolomics as a result of the advent of comprehensive analytical platforms and sensitive analytical instrumentation. Therefore, it is worthwhile to summarize recent developments with current analytical platforms and highlight how metabolomics is being integrated into this classical field to dereplicate and profile natural product extracts. Metabolomics Tools for Natural Product Discoveries: Methods and Protocols aims to unite diverse and recently developed methodologies and protocols in order to identify bioactive secondary metabolites for the purpose of drug discovery. Some topics covered in this volume include applications for the extraction of selected natural products from less common sources such as bryophytes and hard corals, various biological assays, comprehensive applications and strategies for GC-MS, LC-MS, and NMR, as well as protocols and strategies for the structure elucidation of isolated natural products. Written in the successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible Metabolomics Tools for Natural Product Discoveries: Methods and Protocols seeks to serve both professionals and research students with its well-honed methodologies for natural product isolation, biomarker discovery, dereplication, biological assays, and comprehensive metabolomic platforms available for high-throughput analyses.

This volume serves as a comprehensive and useful guide for ENT and allergy physicians in the recognition, diagnosis, and treatment of patients who suffer from sinus headaches and migraines. The text reviews key issues such as identification and management of migraine, and appropriate surgical and nonsurgical treatment that is often not part of ENT or allergy resident training. With 20% of women and 6% of men having migraines (only 50% recognized) this text also serves to expand management options to physicians already medically or surgically treating sinuses or seeing cosmetic patients

with head and neck concerns. Other forms of intervention in migraineurs, such as surgery, Botulinum Toxin injections and adjunctive and integrative therapy, are covered. Sinus Headache, Migraine, and the Otolaryngologist will be an invaluable resource for ENT and allergy specialists, and any physician or medical professional with an interest in sinus headache or migraine.

Revolutionizing the CS2 course, this innovative book teaches programming concepts and techniques essential for working in a modern software development environment. This set of concepts includes the software life cycle, requirements and specification, object-oriented design and programming, exception handling, streams, user interface design, event-driven programming, threads, and networking. While also teaching the fundamental concepts of data structures, the authors change the traditional emphasis from how to design and build them to learning how to analyze and use them. It presents a chapter on the Java Collection Framework and emphasizes that, today, most important data structures already exist in program libraries. This treatment of data structures gives students the information they need to make an informed decision about which classes in the framework are most appropriate for their needs while freeing up significant blocks of time for the treatment of other essential topics.

« Ce livre est un joyau et son auteur, un écrivain immensément prometteur » (Kirkus Reviews).

Accueilli avec enthousiasme par la presse, Parmi les disparus, publié en 2001 aux États-Unis et finaliste du National Book Award, a révélé un nouveau talent. Troublantes, belles et émouvantes, ces nouvelles explorent les fractures qui émaillent nos existences. Qu'il évoque les relations familiales, conjugales ou amicales, Dan Chaon restitue avec une grande sensibilité les sentiments et les pensées, parfois obscurs et contradictoires, que l'on se cache les uns aux autres par peur ou par amour. « L'un de nos meilleurs nouvellistes. Ses histoires sont drôles, déchirantes, brillantes et magnifiquement écrites. » (Lorrie Moore) « Une écriture d'une grande sobriété, une puissance émotionnelle surprenante. Dan Chaon est vraiment le seul écrivain qui mérite d'être comparé à Raymond Carver. » (The Los Angeles Times)

The "Microbiology" volume of the new revised and updated Handbook of Enology focuses on the vinification process. It describes how yeasts work and how they can be influenced to achieve better results. It continues to look at the metabolism of lactic acid bacterias and of acetic acid bacterias, and again, how can they be treated to avoid disasters in the winemaking process and how to achieve optimal results. The last chapters in the book deal with the use of sulfur-dioxide, the grape and its maturation process, harvest and pre-fermentation treatment, and the basis of red, white and speciality wine making. The result is the ultimate text and reference on the science and technology of the vinification process: understanding and dealing with yeasts and bacterias involved in the transformation from grape to wine. A must for all serious students and practitioners involved in winemaking.

The environmental crisis is the most prominent challenge humanity has ever had to battle with, and humanity is currently failing. The Anthropocene—or so called 'age of humans'—is indeed a period when the survival of humanity has never been so much at risk. This book locates itself in the field of critical green political theory. Fremaux's analysis of the current environmental crisis calls for us to embrace radical shifts in our modes of being; or, in other words, socially progressive innovations that will be described within the unique framework of "Green Republicanism." In offering a constructive and emancipatory delineation of what could be considered an ecological civilization that is respectful of its natural environment and social differences, this book describes how to shift from an 'arrogant speciesism' and materialistic lifestyle to a post-anthropocentric ecological humanism focusing on the 'good life' within ecological limits. This new political regime calls for a radical reinvention of our societies, a decentering of the humans within our metaphysical worldview, and a withdrawal of the capitalist technosphere at the benefit of the biosphere. It will require a new economic paradigm that replaces the unsustainable capitalist logic of growth by sustainable degrowth and steady economics. Rooted in ethical thinking and political philosophy, this book seeks to offer a concrete roadmap of how sustainable societies can be fostered.
