Communicating in Small Groups Lippincott Williams & Wilkins

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution

and discusses the major impacts expected on government, of energy that can and should be used. business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

In times of growing talent shortage, companies have to find new ways to fill their strategic positions from the outside. This book presents useful and competitive solutions for hiring talented and motivated employees. The author presents four concrete fields of action to achieve this and provides the reader with definitions of strategically relevant key and bottleneck functions. The book emphasizes the fact that employers must sell relevant functions just like they would as part of an employer branding strategy. Employers are moving towards active sourcing strategies beyond job ads and headhunting. They must maintain and manage relations with promising talent once they have been identified. Finally, employers must ensure a positive candidate experience. This book serves as a handy reference for HR managers and talent recruiters.
