Oddly, there isn't technically a solenoid built into the mount, rather just a sensor which, when the mount starts to collapse, closes a circuit which then sends a fault code to the engine management computer. There have been a few different part numbers for this mount: 4B3 199 379K. and . 4B3 199 379M (current) - \$230.00

the way the mounts work is that there is a fluid chamber with a plastic body in the middle of it, with small channel cut through it. this allows fluid from the top chamber, through the plastic body, to the bottom chamber. the bottom chamber is rubber lined and can deform under pressure. there is also an airway vented to atmosphere, with a rubber membrane separating the fluid from the atmosphere. a solenoid valve, controlled by the motronic, can open or close the airway.
