This handbook is intended to give the broadcast industry an authoritative
guide to the Radio Data System (RDS), also called Radio Broadcast Data
System (RBDS). Since the standard's adoption, about 700 stations have
begun broadcasting RDS in the United States. There is a wide variety of
encoding equipment with prices starting as low as \$400, and over 30 models
of RDS receivers have been introduced for cars, home receivers, portable and
even PC receivers. Automobile manufacturer's such as General Motors, Ford,
Audi, and Porsch now offer RDS on new vehicles. Yet despite all the support
equipment in place, the FM broadcaster has been reluctant to implement and
utilize this service, mainly because of a lack of understanding of what RDS
can do for the station. This book finally provides the information required to
understand RDS and its possibilities on a variety of levels, so that everyone
involved in radio can make the most of it. Station owner, program director,
salesperson, and talent alike will find the information he or she requires to
maximize the possibilities of this new technology. Each feature of the system
is explained in terms of its practical implementation at the station, and
interviews with broadcasters currently using the system add a hands-on
perspective. Scott Wright is a recognized pioneer in RDS development. As
the designer of Delco Electronics' first RDS receiver, he has been extremely
active in the development of the RDS standard in the US and in efforts to

educate the broadcast community about its potential. He has represented Delco at the European Broadcasting Union's (EBU) RDS Forum and is currently the Chairman of the National Radio Systems Committee RBDS Subcommittee, the US standard-setting body. He is also a member of the Electronics Industries Association's (EIA) RDS Forum.

Building on a wealth of research, *The Automotive Industry and the Environment* addresses current challenges in the automotive industry and how they can be met. The authors discuss the development of the automotive industry and the problems it currently faces and consider possible solutions. The book reviews trends in more environmental-friendly technologies, such as the use of more sustainable fuel sources and new types of modular designs with built-in recyclability. The book also describes new models of decentralized production, particularly the micro factory retailing (MFR) model, that provide an alternative to volume production and promise to be both more sustainable and more profitable.
