A richly textured account of the writer's three sojourns in New England "illuminates Hawthorne's art and the intellectual ferment originating in that small, bucolic town" (Publishers Weekly). On his wedding day in 1842, Nathaniel Hawthorne escorted his new wife, Sophia, to their first home, the Old Manse in Concord, Massachusetts. There, enriched by friendships with Thoreau and Emerson, he enjoyed an idyllic time. But three years later, unable to make enough money from his writing, he returned ingloriously, with his wife and infant daughter, to live in his mother's home in Salem. In 1853, Hawthorne moved back to Concord, now the

renowned author of *The Scarlet Letter* and *The House of the Seven Gables*. Eager to resume writing fiction at the scene of his earlier happiness, he assembled a biography of his college friend Franklin Pierce, who was running for president. When Pierce won the election, Hawthorne was appointed the lucrative post of consul in Liverpool. Coming home from Europe in 1860, Hawthorne settled down in Concord once more. He tried to take up writing one last time, but deteriorating health found him withdrawing into private life. In Hawthorne in Concord, acclaimed historian Philip McFarland paints a revealing portrait of this well-loved American author during three distinct periods of his life, spent in the bucolic village of Concord, Massachusetts. "I don't know when I have read a book as satisfying as Hawthorne in Concord." —David Herbert Donald [Car PC Hacks](#) Consumer Guide Books This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to

find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.
