The Global Engineers Univ of California Press Global Health Disputes and Disparities explores inequalities in health around the world, looking particularly at the opportunity for, and limitations of, international law to promote population health by examining its intersection with human rights, trade, and epidemiology, and the controversial issues of legal process, religion, access to care, and the social context of illness. Using a theoretical framework rooted in international law, this volume draws on a wide range of rich empirical data to assess the challenges facing the field, including international legal treaty interpretation, and specific issues related to the application of law in resolving pressing issues in gender, access to care, and social determinants of health. In doing so, it illustrates the challenges for implementing rights-based approaches to address health disparities, with profound implications for future regulations and policymaking. It includes both interviews with leading scholars, as well as a variety of case studies from prominent international forums, including formal claims brought before the Human Rights Council and the Committee on the Elimination of All Forms of Discrimination Against Women, as well as regional and national experiences, drawn from disputes in India, Indonesia, South Africa and the USA. This volume is an innovative contribution to the burgeoning fields of global health and human rights, and will be of

interest to students and researchers in public health, global health, law and sociology interested in the social determinants of health and social justice from both theoretical and practical perspectives.

Historical and Theological Reflections on the Anglican Church from J. I. Packer The Anglican Church has a rich theological heritage filled with a diversity of views and practices. Like a river

with a main current and several offshoot streams, Anglicanism has a main body with many distinct, smaller communities. So what constitutes mainstream Anglicanism? Influential Anglican theologian J. I. Packer makes the case that "authentic Anglicanism" is biblical, liturgical, evangelical, pastoral, episcopal (ordaining bishops), national (engaging with the culture), and ecumenical (eager to learn from other Christians). As he surveys the history and tensions within the Anglican Church, Packer casts a vision for the future that is grounded in the Scriptures, fueled by missions, guided by historical creeds and practices, and resolved to enrich its people.

The world today is far less a global village than a "global city", as global network of multidimensional urban spaces of congestion prominently forming - and also formed by - globalization. But the relevance of cities is nothing but new. They were essential for culture and civilization worldwide, they allowed a centralization of power and knowledge and they were crucial for the division of labor and for the organization of mass demand. Further, as places of intense and continuous interactions, cities are the locations par excellence for global history to take place. Thus, there is a need to study the history of cities in connection with the history of globalization from this perspective. This book is dedicated to contribute to the still

underdeveloped but growing literature connecting the history of cities worldwide and their relation to global processes. The authors do so from various disciplinary backgrounds and by referring to different times and places. We visit ancient Alexandria, nineteenth century Zanzibar, and modern-day São Paulo, among others, and we view these cities not only in their globality, but also through their heritage, their economic relevance, their architecture, or financial flows connecting them. Further, the book also contains systematic considerations about "global city", especially the general role of cities in development, cities in global history teaching, and cities' relationships to global commodity chains.

Unorthodox success principles from a billionaire entrepreneur and philanthropist Eli Broad's embrace of "unreasonable thinking" has helped him build two Fortune 500 companies, amass personal billions, and use his wealth to create a new approach to philanthropy. He has helped to fund scientific research institutes, K-12 education reform, and some of the world's greatest contemporary art museums. By contrast, "reasonable" people come up with all the reasons something new and different can't be done, because, after all, no one else has done it that way. This book shares the "unreasonable" principles—from negotiating to risk-taking, from investing to hiring—that have made Eli Broad such a success. Broad helped to create the Frank Gehry-designed Walt Disney Concert Hall, the Museum of Contemporary Art, the Broad Contemporary Art Museum at the Los Angeles County Museum of Art, and The Broad, a new museum being built in downtown Los Angeles His investing approach to philanthropy has led to the creation of scientific and medical research centers in the fields of genomic medicine and stem cell research At his alma mater, Michigan State University, he endowed a full-time M.B.A. program, and he and his wife have funded a new contemporary art museum on campus to serve the broader region Eli Broad is the founder of two Fortune 500 companies: KB Home and SunAmerica If you're stuck doing what reasonable people do—and not getting anywhere—let Eli Broad show you how to be unreasonable, and see how far your next endeavor can go.

"Gross stocks of foreign assets have increased rapidly relative to national outputs since 1990, and the short-run capital gains and losses on those assets can amount to significant fractions of GDP. These fluctuations in asset values render the national income and product account measure of the current account balance increasingly inadequate as a summary of the change in a country's net foreign assets. Nonetheless, unusually large current account imbalances, especially deficits, should remain high on policymakers' list of concerns, even for the richer and less credit-constrained countries. Extreme imbalances signal the need for large and perhaps abrupt real exchange rate changes in the future, changes that might have undesired political and financial consequences given the incompleteness of domestic and international asset markets. Furthermore, of the two sources of the change in net foreign assets -- the current account and the capital gain on the net foreign asset position -- the former is better understood and more amenable to policy influence. Systematic government attempts to manipulate international asset values in order to change the net foreign asset position could have a destabilizing effect on market expectations"--NBER website

The Global Engineers: Building a Safe and Equitable World Together, is inspired by the opportunities for engineers to contribute to global prosperity. This book presents a vision for Global Engineering, and identifies that engineers should be concerned with the unequal and unjust distribution of access to basic services, such as water, sanitation, energy, food, transportation, and shelter. As engineers, we should place an emphasis on identifying the drivers, determinants, and solutions to increasing equitable access to reliable services. Global Engineering envisions a world where everyone has safe water, sanitation, energy, food, shelter, and infrastructure, and can live in health, dignity, and prosperity. This book seeks to examine the role and ultimately the impact of engineers in global development.

Engineers are solutions-oriented people. We enjoy the opportunity to identify a product or need, and design appropriate technical solutions. However, the structural and historical barriers to global prosperity requires that Engineers focus more broadly on improving the tools and practice of poverty reduction and that we include health, economics, policy, and governance as relevant expertise with which we are conversant. Engineers must become activists and advocates, rejecting ahistorical technocratic approaches that suggest poverty can be solved without justice or equity. Engineers must leverage our professional skills and capacity to generate evidence and positive impact toward rectifying inequalities and improving lives. Half of this book is dedicated to profiles of engineers and other technical professionals who have dedicated their careers to searching for solutions to global development challenges. These stories introduce the reader to the diverse opportunities and challenges in Global Engineering.

Tasty, convenient, and cheap, instant noodles are one of the most remarkable industrial foods ever. Consumed around the

world by millions, they appeal to young and old, affluent and impoverished alike. The authors examine the history, manufacturing, marketing, and consumption of instant noodles. By focusing on three specific markets, they reveal various ways in which these noodles enable diverse populations to manage their lives. The first market is in Japan, where instant noodles have facilitated a major transformation of post-war society, while undergoing a seemingly endless tweaking in flavors, toppings, and packaging in order to entice consumers. The second is in the United States, where instant noodles have become important to many groups including college students, their nostalgic parents, and prison inmates. The authors also take note of "heavy users," a category of the chronically hard-pressed targeted by U.S. purveyors. The third is in Papua New Guinea, where instant noodles arrived only recently and are providing cheap food options to the urban poor, all the while transforming them into aspiring consumers. Finally, this study examines the global "Big Food" industry. As one of the food system's singular achievements, the phenomenon of instant noodles provides insight into the pros and cons of global capitalist provisioning.

This book is open access under a CC BY 4.0 license. Rethinking the ways global history is envisioned and conceptualized in diverse countries such as China, Japan, Mexico or Spain, this collection considers how global issues are connected with our local and national communities. It examines how the discipline had evolved in various historiographies, from Anglo Saxon to southern European, and its emergence in Asia with the rapid development of the Chinese economy motivation to legitimate the current uniqueness of

the history and economy of the nation. It contributes to the revitalization of the field of global history in Chinese historiography, which have been dominated by national narratives and promotes a debate to open new venues in which important features such as scholarly mobility, diversity and internationalization are firmly rooted, putting aside national specificities. Dealing with new approaches on the use of empirical data by framing the proper questions and hypotheses and connecting western and eastern sources, this text opens a new forum of discussion on how global history has penetrated in western and eastern historiographies, moving the pivotal axis of analysis from national perspectives to open new venues of global history.
