Diamonds are a multi-billion dollar business involving some of the world's largest mining companies, a million and a half artisanal diggers, more than a million cutters and polishers and a huge retail jewellery sector. But behind the sparkle of the diamond lies a murkier story, in which rebel armies in Angola, Sierra Leone and the Congo turned to diamonds to finance their wars. Completely unregulated, so-called blood diamonds became the perfect tool for money laundering, tax evasion, drug-running and weapons-trafficking. Diamonds brings together for the first time all aspects of the diamond industry. In it, Ian Smillie, former UN Security Council investigator and leading figure in the blood diamonds campaign, offers a comprehensive analysis of the history and structure of today's diamond trade, the struggle for effective regulation and the challenges ahead. There is, he argues, greater diversification and competition than ever before, but thanks to the success of the Kimberley Process, this coveted and prestigious gem now represents a fragile but renewed opportunity for development in some of the world's poorest nations. This part of the diamond story has rarely been told.

The economic activities of humanity, particularly during the last couple of cen-

turies, have had a profound impact on the natural environment. Fast depletion of the world's forest resources, fish stocks, fossil fuels and mine deposits have raised many moral as well as practical questions concerning present and future generations. Furthermore, a number of global environmental problems such as acid rain, the 'greenhouse effect' and depletion of the ozone layer are causing concern throughout the world. What does economics say about the exploitation of nature's scarce resources? This book, which is a much expanded version of an earlier publication, Economics of Natural Resources and the Environment, aims mostly at final-year undergraduates reading subjects such as economics, business studies, environmental science, forestry, marine biology, agriculture and development studies. There is also a good deal of material - especially in the chapters on fisheries, forestry, valuation and discounting - that post-graduate students may find useful as stepping-stones. The material presented stems from my lectures to final-year students at the University of Ulster during the last 12 years, and some of my ongoing research work. When I moved to Northern Ireland in 1982 I was given a course called 'Economics of Exhaustible Resources' to teach. This has changed its title and focus a number of times along with the structure of the University. My early reading lists included a number of journal articles and books written on the subject.

Sixteen contributions show how environmental laws have been inconsistently applied, so that low-income communities and people of color suffer disproportionately from public health hazards. The essays describe how abuses have flourished for lack of government action and organized resistance, and document the strategies of grassroots groups on building coalitions among traditional environmentalists and social justice groups. Employing nearly half of the world's workforce, agriculture is clearly of great economic and social importance. An incredible variety of methods are used globally; the Western world has the latest scientific and industrial advancements at its disposal, yet in the Third World a living is made using tools that have hardly changed in two thousand years. An Introduction to Agricultural Geography provides an extensive guide through this diverse and increasingly important geographical subject, aiming to show that a wide range of factors explain how agricultural practices differ from place to place. Dealing with the physical environment, economic behaviour and demands, institutional and social influences and the impact of farming upon the environment, the author has produced an important introductory text that is topical, incisive and ultimately essential to reach an understanding of the remarkable diversity of the world's major industry.

Everywhere bandages . . . bandages . . . bandages . . . and blood. Those words describe the moment when Private John Lewis Barkley first grasped the grim reality of the war he had entered. The rest of Barkley's memoir, first published in 1930 as No Hard Feelings and long out of print, provides a vivid ground-level look at World War I through the eyes of a soldier whose exploits rivaled those of Sergeant York.

A reconnaissance man and sniper, Barkley served in Company K of the 4th Infantry Regiment, a unit that participated in almost every major American battle. The York-like episode that earned Barkley his Congressional Medal of Honor occurred on October 7, 1918, when he climbed into an abandoned French tank and singlehandedly held off an advancing German force, killing hundreds of enemy soldiers. But Barkley's memoir abounds with other memorable moments and vignettes, all in the words of a soldier who witnessed war's dangers and degradations but was not at all fazed by them. Unlike other writers identified with the "Lost Generation," he relished combat and made no apology for having dispatched scores of enemy soldiers; yet he was as much an innocent abroad as a killing machine, as witnessed by second thoughts over his sniper's role, or by his determination to protect a youthful German prisoner from American soldiers eager for retribution. This Missouri backwoodsman and sharpshooter was also a bit of a troublemaker who smuggled liquor into camp, avoided promotions like the plague, and had a soft heart for mademoiselles and fruleins alike. In his valuable introduction to this stirring memoir, Steven Trout helps readers to better grasp the historical context and significance of this singular hero's tale from one of our most courageous doughboys. Both haunting and heartfelt, inspiring and entertaining, Scarlet Fields is a long overlooked gem that opens a new window on our nation's experience in World War I and brings back to life a bygone era.

World Bank Technical Paper No. 378. In the cities of Nepal's Kathmandu Valley, the main contributor of air pollution comes from the transport sector, followed by power plants, industrial units, and burning of garbage. Fuel quality and engine conditions significantly influence the level of air pollution. In response to this growing problem, the Urban Environment Management Committee was launched to assist local institutions in developing action plans that would be an integral part of their air quality management system. This report focuses on the development of the air quality management system and concludes with an action plan for air pollution abatement that takes into account the economic costs and benefits of abatement measures for the Kathmandu Valley.

Why is productivity higher in cities? Does urbanization cause growth or does growth cause urbanization? Do countries achieve rapid growth or high incomes without urbanization? How can policy makers reap the benefits of urbanization without paying too high a cost? Does supporting urbanization imply neglecting rural areas? Why do so few governments welcome urbanization? What should governments do to improve housing conditions in cities as they urbanize? Are innovations in housing finance a blessing or a curse for developing

countries? How will governments finance the trillions of dollars of infrastructure spending needed for cities in developing countries? First in a series of thematic volumes, this book was prepared for the Commission on Growth and Development to evaluate the state of knowledge of the relationship between urbanization and economic growth. It does not pretend to provide all the answers, but it does identify insights and policy levers to help countries make urbanization work as part of a national growth strategy. It examines a variety of topics: the relevance and policy implications of recent advances in urban economics for developing countries, the role of economic geography in global economic trends and trade patterns, the impacts of urbanization on spatial inequality within countries, and alternative approaches to financing the substantial infrastructure investments required in developing-country cities. Written by prominent academics in their fields, *Urbanization and Growth* seeks to create a better understanding of the role of urbanization in growth and to inform policy makers tackling the formidable challenges it poses.

The annual *Asian Development Outlook*, now in its 30th year, analyzes economic performance in the past year and forecasts performance in the next 2 years for the 45 economies in Asia and the Pacific that make up developing Asia. Growth prospects in developing Asia remain strong despite persistent external headwinds responsible for moderating expansion since 2017. Global trade and economic activity weakened toward the end of 2018, slowing growth in many economies in the region. The outlook is cloudy with risks that tilt to the downside. A drawn-out trade conflict could undermine trade and investment in the region, and US fiscal policy and the consequences of a disorderly Brexit could weigh on growth in the advanced economies and the People's Republic of China. Though the risk of sharp increases in US interest rates has subsided, policy makers must stay vigilant. Disasters are shaped by natural hazards and the dynamics of the economy, society, and environment in which they occur. They pose a growing threat to development and prosperity in the region, their consequences disproportionately severe in developing countries, especially for the poor and marginalized. As developing Asia is home to more than four-fifths of the people affected by disasters globally in the past 2 decades, the region must strengthen its disaster resilience. This means integrating disaster risk reduction into national development and investment plans, spending more on prevention for a better balance with spending on rescue and recovery, and pooling risk through insurance and reinsurance.
