Practical Ethics for Effective Treatment of Autism

Spectrum Disorder is for behavior analysts working

directly with, or supervising those who work with,

individuals with autism. The book addresses important

topics such as the principles and values that

underlie the Behavior

Analyst Certification

Board's® Professional and Ethical Compliance Code

for Behavior Analysts, and factors that affect ethical

decision-making. In

addition, the book

addresses critical and

under-discussed topics of: scope of competence;

evidence-based practice in behavior analysis; how to

collaborate with

professionals within and outside one's discipline;

and how to design systems of ethical supervision and

training customized to unique treatment settings.

Across many of the topics, the authors also discuss

errors students and

professionals may make during analyses of ethical

dilemmas and

misapplications of ethical codes within their practice.

Reviews core ethical

principles Discusses factors that affect ethical decision-

making Describes how to create systems for teaching

and maintaining ethical

behavior Discusses how to identify your own scope of

Hope – and help – for your child. For twenty years Dr. Ricki Robinson has been providing hope and help for children with Autism Spectrum Disorders. Her integrative, strengths – based approach to treatment includes a thorough evaluation of your child's medical, developmental, social,

emotional, behavioural and educational issues to find the solutions that maximise your child's health and well – being. Autism Solutions gives parents a greater understanding of their child's unique learning, sensory and medical profile. Recognising that no parent can do this alone, Dr. Robinson explains how to establish a team of professionals who can work with the child to give him or her the opportunity to live well, learn, interact and thrive. Autism Solutions covers a wide range of issues, including: \* Helping your child relate, communicate and think \* Recognising and overcoming common health challenges \* Effectively treating diseases and disorders that frequently accompany autism \* Developing creative solutions to communication issues \* Understanding how behaviour can be a form of communication and how to

---

"hear" what a child is telling you \* Coping with family, siblings, and society \*  
Unlocking your child's full potential Infused with hope, this practical guide will help parents better understand their child and, most importantly, help their child to be the best he can be.

### The Politics of Autism

Rowman & Littlefield

For those growing up with an intellectual disability or autism, comfortable, safe and independent travel will prove an invaluable life skill. The key to pursuing fulfilling work and leisure activities and developing as an individual, it also brings a liberating level of self-sufficiency and reassurance of equality within society. Arriving at this goal can be daunting. Dr Gallimore's straightforward five-step system will guide

parents and professionals through successful training for children of any age and ability.

Focusing on understanding each child's individual goals and challenges, it gives you the 'ingredients' needed to fully prepare for each journey in advance, and shows how to judge when to step back and let the child progress alone.

Addressing specific fears and obstacles that make travel difficult for children with learning difficulties, it sets out all the precautions necessary to safeguard children and others as they learn to reach their chosen destinations.

Clear-cut and far-reaching, this book is enriched by Dr Gallimore's extensive experience as a

---

psychologist, mobility specialist and travel-trainer. It is a heartening resource and will be necessary reading for anyone working with a child to get them on their path to independent travel.

### Physical Education for Students With Autism Spectrum Disorders

Dr. Gertrude A. Barber  
National Institute

In the first book devoted exclusively to the contentious politics of autism, noted political scientist and public policy expert John J. Pitney, Jr., explains how autism has evolved into a heated political issue disputed by scientists, educators, social workers, and families. Nearly everything about autism is subject to debate and struggle, including its

measurement and definition. Organizational attempts to deal with autism have resulted in not a single “autism policy,” but a vast array of policies at the federal, state, and local levels, which often leave people with autism and their families frustrated and confused. Americans with autism are citizens, friends, coworkers, sons, daughters, fathers, and mothers. No longer simply the objects of public policy, they are active participants in current policy debates. Pitney’s fascinating look at how public policy is made and implemented offers networks of concerned parents, educators, and researchers a compass to navigate the current systems and hope for a path towards more

regularized and effective policies for America ' s autism community.

We walk the walk but do we talk the talk? As clinicians, do we speak with parents or to them? Is it effective in motivating them to adhere to interventions or do you find that sometimes they inhale and exhale at the sight/sound of parent training sessions?  
Research shows that parents who receive parent training obtain better outcomes out of their children's treatment, decrease their overall

---

expenditures in therapy and is that enough? Before we become empowered to begin our journey into maintain these behavior Motivational Interviewing changes over time. (MI) think about a parent, grandparent, teacher or a supervisee/supervisor you have worked with in the past that has been reluctant to follow your recommendations. Or perhaps you were that person that was hesitant to follow a professional's recommendation. Keep that example in mind, and as you navigate through the chapters, think about how your interactions would have been different if you/they used more of an MI approach. The primary goal of this manual is to shape clinicians' communication approach to foster a working alliance with parents, teachers and other professionals working in the field of behavior analysis. MI is not just a patient-centered "mumbo jumbo" psychological approach, it is a patient (or caregiver) focused

---

approach that aims to change behaviors by allowing patients to acknowledge their current needs and move them towards change. Through our discussion, we review current research on Parent Training (PT), outline barriers to parental involvement, discuss adaptive and maladaptive communication styles, present a behavior analytical conceptualization of motivation, introduce the concepts of MI and provide examples and exercises to practice the concepts. A major concept in these chapters is ambivalence and resistance. Resistance is understood as a direct byproduct of maladaptive parent-clinician communication styles that increases distress and leads to parental disengagement. To address resistance, we reveal a program focused on increasing clinicians' awareness of their

communication style with caregivers (and other professionals) and explain ways to modify current interactions to decrease noncooperation and increase parents' motivation in the treatment process. Although this manual uses the term "parents" and "caregivers" interchangeably, the interventions are equally applicable to professionals working with teachers, supervisees and other staff as well as a host of others working in helping situations. From the first chapter to the last, we provide interactive "real world" exercises as well as a "MI toolbox" to equip clinicians with communication strategies to help them resolve parental ambivalence and facilitate parental engagement in treatment. According to statistics reported by CDC in 2020, 1 in 54 children in the USA were diagnosed with autism spectrum disorder (ASD) in 2016. The latest statistics in the UK show that there are 700,000 autistic diagnoses. It is suggested that boys are 4 times more likely

to get a diagnosis of autism than girls. Like so many parents, you might be wondering if you are doing things by starting to potty train your child. Aside from being a Speech and Language Therapist, I am also a mum and I know the worry we put ourselves through about the right time to introduce new skills. The internet is our go-to resource to find our answers but with such a wide spectrum, it's hard to find the exact advice for your individual child. One of your biggest questions you may be asking yourself is that, should I even try to introduce potty training as my child does not talk yet. Whether your child has
