The latest update to Bela Liptak's acclaimed "bible" of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of Process Control and Optimization continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their from-the-trenches advice has been repeatedly tested in real-life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

Offering a modern, process-oriented approach emphasizing process control scheme development instead of extended coverage of LaPlace space descriptions of process dynamics, Designing Controls for the Process Industries focuses on aspects that are most important for contemporary practical process engineering and reflects the industry ' s use of digital distributed control-based systems. The second edition now features 60 tutorial videos demonstrating solutions to most of the example problems. Instead of starting with the controller, the book starts with the process and moves on to how basic regulatory control schemes can be designed to achieve the process objectives while maintaining stable operations. In addition to continuous control concepts, process and control system dynamics are embedded into the text with each new concept presented. The book alsoincludes sections on batch and semi-batch processes and safety automation within each concept area. It discusses the four most common control techniques: control loop feedback, feedforward, ratio, and cascade, and discusses application of these techniques for process control schemes for the most common types of unit operations. It also discusses more advanced andless commonly used regulatory control options such as override, allocation, and split range controllers; includes an introduction to higher-level automation functions; and provides guidance for ways to increase the overall safety, stability, and efficiency for many process applications. It introduces the theory behind the most common types of controllers used in the process industries and provides various additional plant automation-related subjects. The new edition also includes new homework problems and examples, including multiple choice questions for flipped classes, information about statistical process control, and a new case study that documents the development of regulatory control schemes for an entire process area. Aimed at chemical engineering students in process control courses, as well as practicing process and control engineers, this textbook offers an alternative to traditional texts and offers a practical, hands-on approach to design of process controls. PowerPoint lecture slides, multiple-choice quiz questions for each chapter, and a solutions manual are available to qualifying instructors. Tutorial-style videos for most of the text examples are available for all readers to download.

(Quick Pro Guides). From bedroom studios to the stages at Coachella, Auto-Tune pitch correction has become an integral part of music production and performance. Mastering Auto-Tune provides users of all levels a handy, comprehensive guide to getting the most out of this key music production technology, from the ubiquitous Auto-Tune effect heard on countless hit singles to the discrete pitch correction applied to countless albums and live performances. Former product and support manager for the music industry (including Antares Audio Technologies, the makers of Auto-Tune) Max Mobley uses a conversational style without cutting corners on key technical terms and concepts. Mastering Auto-Tune approaches pitch correction with various workflow scenarios and creative objectives in mind, including the fastest way to get professional results using the Auto-Tune vocal effect; the secrets behind applying pitch correction to a vocal track in such a transparent way that not even the singer will know it has been applied; speedy, real-time pitch correction using Auto-Tune's Auto Mode; surgical offline pitch-correction editing using Auto-Tune's Graph Mode; pitch correction on musical instruments; and even how to use Auto-Tune for melody creation. Also included is detailed information on Antares' newest software, Auto-Tune Live. In short, this book is the definitive guide to one of the most important music technologies of the past 15 years.

Automatic Tuning of Compilers Using Machine Learning
This book explores break-through approaches to tackling and mitigating the well-known problems of compiler optimization using design space exploration and machine learning techniques. It demonstrates that not all the optimization passes are suitable for use within an optimization sequence and that, in fact, many of the available passes tend to counteract one another. After providing a comprehensive survey of currently available methodologies, including many experimental comparisons with state-of-the-art compiler frameworks, the book describes new approaches to solving the problem of selecting the best compiler optimizations and the phase-ordering problem, allowing readers to overcome the enormous complexity of choosing the right order of optimizations for each code segment in an application. As such, the book offers a valuable resource for a broad readership, including researchers interested in Computer Architecture, Electronic Design Automation and Machine Learning, as well as computer architects and compiler developers.
