### *Single Auto Focus or Manual Focus*

All DSLRs allow you to turn off the autofocus and let you work with the focus ring to acquire sharp focus. Some people might find this time consuming or difficult, but as we said, photography is an art. You can use focus as a means of drawing attention to or away from certain subjects.

Skills in Practice: Auto Focus Vs. Manual Focus - A Field ...  
Manual Focus vs Autofocus. In the early days of photography,

every single lens was manual focus only (and many lenses today are the same way). Autofocus is a comparatively new invention in the history of photography, first appearing on the market in 1977. Still, it 's an important one.

You can opt for autofocus without a doubt when photographing action. For instance, when photographing birds in flight or animals that are running, stick to autofocus. But, when you 've set up your composition, and you don 't plan on following the subjects around, you 'd be better off using manual focus.

### Manual Focus Vs. Auto Focus: Which Wins For The Street ...

You can also use autofocus and manual focus together to achieve a single image. When shooting landscapes for which you want maximum depth of field, it is often helpful to use autofocus to focus exactly one-third into the scene (more on hyperfocal distance in the next chapter) and then switch to manual to

---

keep the same focal plane when recomposing the frame. *5 Situations When Manual Focus is Better than Auto Focus*

Some street photographers use manual focus all the time – they zone focus and never worry about missing a shot. Others regularly use autofocus because it's speedy and accurate. The capabilities of your particular camera and lens will play a role in how you shoot, as will the

environment in which you are shooting. [A Guide to Mastering Manual Focus](#)

Manual focus is for taking over when your camera's autofocus can't do a good enough job. For example, with Milky Way photography, almost no cameras can autofocus on the stars successfully, and manual focus is a must. The same goes in low-contrast environments like a thick fog. Most of the time, though, autofocus is more than good enough.

## **Photography Basics #4: Digital Auto Focus vs Manual Focus ...**

Auto focus comes with quickness and precision that manual focus just doesn't have. Therefore, it is the best choice for still photography, hands down. On the other hand, manual focus is usually acceptable for still photography when an auto-focus system is likely to fail or if you're looking to focus precisely on a part of the image.
