In order to establish and then maintain a successful presence on the Web, designing a creative site is only half the battle. What good is an intricate Web infrastructure if you're unable to measure its effectiveness? That's why every business is desperate for feedback on their site's visitors: Who are they? Why do they visit? What information or service is most valuable to them?

Unfortunately, most common Web analytics software applications are long on functionality and short on documentation. Without clear guidance on how these applications should be integrated into the greater Web strategy, these often expensive investments go underused and underappreciated. Enter Web Site Measurement Hacks, a guidebook that helps you understand your Web site visitors and how they contribute to your business's success. It helps organizations and individual operators alike make the most of their Web investment by providing tools, techniques, and strategies for measuring--and then improving--their site's usability, performance, and design. Among the many topics covered, you'll learn: definitions of commonly used terms, such as "key performance indicators" (KPIs) how to drive potential customers to action how to gather crucial marketing and customer data which features are useful and which are superfluous advanced techniques that senior Web site analysts use on a daily basis By examining how real-world companies use analytics to their success, Web Site Measurement Hacks demonstrates how you, too, can accurately measure your Web site's overall effectiveness. Just as importantly, it bridges the gulf between the technical teams charged with maintaining your Web's infrastructure and the business teams charged with making management decisions. It's the technology companion that every site administrator needs.

This textbook, first published in 2003, emphasises the fundamentals and the mathematics underlying computer graphics. The minimal prerequisites, a basic knowledge of calculus and vectors plus some programming experience in C or C++, make the book suitable for self study or for use as an advanced undergraduate or introductory graduate text. The author gives a thorough treatment of transformations and viewing, lighting and shading models, interpolation and averaging, Bézier curves and B-splines, ray tracing and radiosity, and intersection testing with rays. Additional topics, covered in less depth, include texture mapping and colour theory. The book covers some aspects of animation, including quaternions, orientation, and inverse kinematics, and includes source code for a Ray Tracing software package. The book is intended for use along with any OpenGL programming book, but the crucial features of OpenGL are briefly covered to help readers get up to speed. Accompanying software is available freely from the book's web site.

Knowledge intensive entrepreneurship lies at the core of the structural shift necessary for the growth and development of a

knowledge based economy, yet research reveals that the EU has fewer young leading innovators, and Europe's new firms do not adequately contribute to industrial growth. This is especially true in the high R&D intensive, high-tech sectors. This structural malaise, undermining Europe's growth potential, is well diagnosed, but poorly understood. This volume fills this important gap by exploring new firms that have significant knowledge intensity in their activity and develop and exploit innovative opportunities in diverse sectors. Through an evolutionary and systemic approach to entrepreneurship, focusing on knowledge intensive entrepreneurship as both a micro and a macro phenomena and analyzing firms in the context of various socio-economic models, the authors explore firms creation and origins around the world, their organization, strategies and business models as well as the role of innovation systems and institutions in their formation and growth. This comprehensive research text is vital reading for academics, researchers and students of high-tech and knowledge intensive entrepreneurship as well as those with an interest in industrial dynamics, innovation management and public policy.
