Books for Young

In The Pension Fund
Revolution, originally
published nearly two
decades ago under the
title The Unseen
Revolution, Drucker

reports that
institutional
investors, especially
pension funds, have
become the controlling
owners of America's
large companies, the
country's only
capitalists. He
maintains that the
shift began in 1952
with the establishment
of the first modern
pension fund by
General Motors. By
1960 it had become so
obvious that a group
of young men decided
to found a stock-
exchange firm catering
exclusively to these
new investors. Ten
years later this firm
(Donaldson, Lufkin &
Jenrette) became the
most successful, and
one of the biggest,
Wall Street
firms. Drucker's
argument, that through
pension funds
ownership of the means
of production had

become socialized without becoming nationalized, was unacceptable to the conventional wisdom of the country in the 1970s. Even less acceptable was the second theme of the book: the aging of America. Among the predictions made by Drucker in *The Pension Fund Revolution* are: that a major health care issue would be longevity; that pensions and social security would be central to American economy and society; that the retirement age would have to be extended; and that altogether American politics would increasingly be dominated by middle-class issues and the values of elderly people. While readers of the original edition found these

conclusions hard to accept, Drucker's work has proven to be prescient. In the new epilogue, Drucker discusses how the increasing dominance of pension funds represents one of the most startling power shifts in economic history, and he examines their present-day impact. *The Pension Fund Revolution* is now considered a classic text regarding the effects of pension fund ownership on the governance of the American corporation and on the structure of the American economy altogether. The reissuing of this book is more timely now than ever. It provides a w
