Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food

and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

A groundbreaking book that dissects a slanderous history dating from cinema 's earliest days to contemporary Hollywood blockbusters that feature machine-gun wielding and bomb-blowing "evil" Arabs Award-winning film authority Jack G. Shaheen, noting that only Native Americans have been more relentlessly smeared on the silver screen, painstakingly makes his case that "Arab" has remained Hollywood 's shameless shorthand for "bad guy," long after the movie industry has shifted its portrayal of other minority groups. In this comprehensive study of over one thousand films, arranged alphabetically in such chapters as

Shaheen documents the tendency to portray Muslim Arabs as Public Enemy #1—brutal, heartless, uncivilized Others bent on terrorizing civilized Westerners. When many scholars are asked about early human settlement in the Americas, they might point to a handful

of archaeological sites as evidence. Yet the process was not a simple one, and today there is no consistent argument favoring a particular scenario for the peopling of the New World. This book approaches the human settlement of the Americas from a biogeographical perspective in order to provide a better understanding of the mechanisms and consequences of this unique event. It considers many of the questions that continue to surround the peopling of the Western Hemisphere, focusing not on sites, dates, and artifacts but rather on theories and models that attempt to explain how the colonization occurred. Unlike other studies, this book draws on a wide range of disciplines—archaeology, human genetics and osteology, linguistics, ethnology, and ecology—to present the big picture of this migration. Its wide-ranging content considers who the Pleistocene settlers were and where they came from, their likely routes of migration, and the ecological role of these pioneers and the consequences of colonization.

Comprehensive in both geographic and topical coverage, the contributions include an explanation of how the first inhabitants could have spread across North America within several centuries, the most comprehensive review of new mitochondrial DNA and Y-chromosome data relating to the colonization, and a critique of recent linguistic theories. Although the authors lean toward a conservative rather than an extreme chronology, this volume goes beyond the simplistic emphasis on dating that has dominated the debate so far to a concern with late Pleistocene forager adaptations and how foragers may have coped with a wide range of environmental and ecological factors. It offers researchers in this exciting field the most complete summary of current knowledge and provides non-specialists and general readers with new answers to the questions surrounding the origins of the first Americans.

While much current research on political Islam revolves around militant Islamism, the genesis of this ideology remains little understood. *A System of Life* is a pioneering examination of the earliest attempt at a systematic outline of Islamist ideology, namely that proposed in the 1930s and early 1940s by the renowned Indo-Muslim intellectual Sayyid Abu'l-A'la Mawdudi. Hartung reconstructs his thought in the light of the competing ideologies at play at the time, especially his claim to recast Islam as an all-comprehensive, self-contained and inner-worldly system of life. His analysis is embedded in an understanding of the history of ideas that assumed increasingly global dimensions through colonial encounters. By showing how Mawdudi -- depicted as a major protagonist of this development - attempted to align elements of Western philosophical thought with selected traditional Islamic ideas and concepts, 'Islamism' is established as an Islamic contribution to a universalistic notion of modernity. Along with offering a detailed portrayal of Mawdudi's system of thought, Hartung also discusses the reception and modification of his ideas in the Middle East, predominantly among intellectuals of the Egyptian Muslim Brotherhood, and among their imitators in postcolonial South Asia.

Cities have experienced an unprecedented rate of growth in the last decade. More than half the world's population lives in urban areas, with the U.S. percentage at 80 percent. Cities

have captured more than 80 percent of the globe's economic activity and offered social mobility and economic prosperity to millions by clustering creative, innovative, and educated individuals and organizations. Clustering populations, however, can compound both positive and negative conditions, with many modern urban areas experiencing growing inequality, debility, and environmental degradation. The spread and continued growth of urban areas presents a number of concerns for a sustainable future, particularly if cities cannot adequately address the rise of poverty, hunger, resource consumption, and biodiversity loss in their borders. Intended as a comparative illustration of the types of urban sustainability pathways and subsequent lessons learned existing in urban areas, this study examines specific examples that cut across geographies and scales and that feature a range of urban sustainability challenges and opportunities for collaborative learning across metropolitan regions. It focuses on nine cities across the United States and Canada (Los Angeles, CA, New York City, NY, Philadelphia, PA, Pittsburgh, PA, Grand Rapids, MI, Flint, MI, Cedar Rapids, IA, Chattanooga, TN, and Vancouver, Canada), chosen to represent a variety of metropolitan regions, with consideration given to city size, proximity to coastal and other waterways, susceptibility to hazards, primary industry, and several other factors.

It treats on such important subjects as: The important role that the researcher and veterinarian play in developing animal protocols. Methods for assessing and ensuring an animal's well-being. General animal-care elements as they apply to neuroscience and behavioral research, and common animal welfare challenges this research can pose. The use of professional judgment and careful interpretation of regulations and guidelines to develop performance standards ensuring animal well-being and high-quality research. Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research treats the development and evaluation of animal-use protocols as a decision-making process, not just a decision. To this end, it presents the most current, in-depth information about the best practices for animal care and use, as they pertain to the intricacies of neuroscience and behavioral research.

The book covers a wide range of international issues using critical, empirical, and quantitative analyses. It discusses various approaches to topics such as resolving political tension and terrorism issues, the potential use of biological weapons, and the role of public relations in crisis. The author offers insight into organizational and community resiliency development; a "surprise management" theory in practice for upgrading the knowledge and skills in managing crises and governing emergencies; and better and more effective organizational, political, social, and managerial coordination in the processes. He presents case studies that enhance and advance the future theory and practice of crisis and emergency management, while at the same time providing practical advice that can be put to use immediately. This textbook introduces students of economics to the fundamental notions and instruments in linear algebra. Linearity is used as a first approximation to many problems that are studied in different branches of science, including economics and other social sciences. Linear algebra is also the most suitable to teach students what proofs are and how to prove a statement. The proofs that are given in the text are relatively easy to understand and also endow the student with different ways of thinking in making proofs. Theorems for which no proofs are given in the book are illustrated via figures and examples. All notions are illustrated appealing to geometric intuition. The book provides a variety of economic examples using linear algebraic tools. It mainly addresses students in economics who need to build up skills in understanding mathematical reasoning. Students in mathematics and informatics may also be interested in learning about the use of mathematics in economics.

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to

new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.
